Two profitable lines for the down-to-date hardware dealer

METALLIC

Take advantage of the general evolution of building construction, of the great demand for fireproof material. Push "Metallic" Goods. Their superior quality insures permanent customers and increased profits.

CORNICES

are ARTISTIC, DURABLE and EASILY ERECTED. They are made of sheet copper or galvanized steel in designs to suit any style of building.

ANOTHER LINE WHERE "METALLIC" LEADS—

SKYLIGHTS

are practically imperishable. The frames are of hollow metal, galvanized steel or sheet copper, and when glazed with wire glass are absolutely fireproof.

It's the "Metallic" Quality and Workmanship that count.
Ample reason why it pays to handle "Metallic" Goods.
Write for new illustrated price list No. 4.

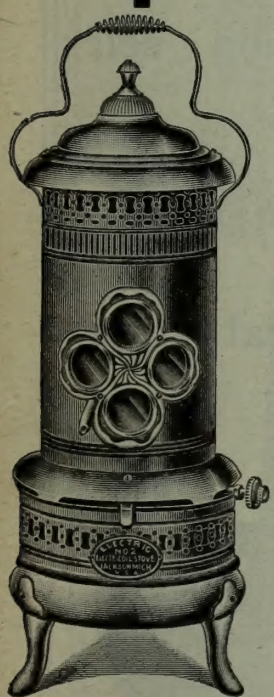
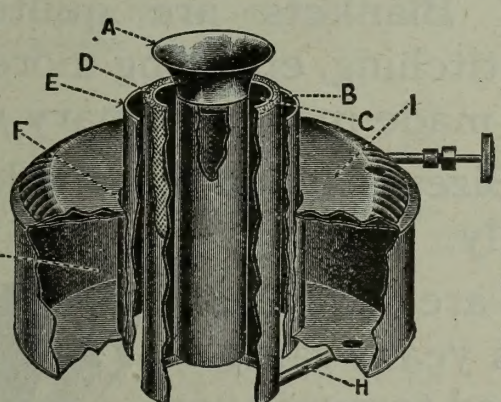
The Christy Safety Razor Co., Ltd., 147, Queen Victoria Street, LONDON, ENGLAND.



MORE THAN A MILLION IN USE. SOLD ON MERIT—NEVER ON BLUFF.
THE BIGGEST HEAT VALUE IN THE WORLD FOR THE MONEY.

Alumino and Electric Oil Heaters

The only oil heaters which heat from the sides and bottom as well as from the top, therefore the only oil heaters which can be satisfactory, because they heat the entire room.

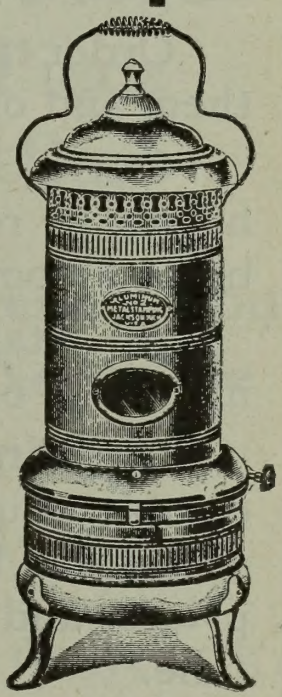


No Smell, No Smoke, No Danger, No Trouble. A Furnace for Heat—No other Oil Heater on earth so good, so safe, so SATISFACTORY

The only oil heaters equipped with our **Grand Safety Burner**, which alone gives perfect combustion and therefore perfect safety with perfect heating qualities.

NOTE

A sale is made as soon as you show this burner to the prospective purchaser, and when you make a sale there are no "after troubles."



Sectional View, Showing Construction Grand "SAFETY BURNER."

A—Flame Spreader; B—Air space outside of Wick; C—Air space inside of Wick; D—Wick; E—Outside Casing to Burner; F—Air space between Fount and Outside Casing; G—Fount for oil, entirely separate from Burner; H—Feed Pipe carrying oil from Fount to Burner.

NOTE

Any child can operate and rewick these heaters. It is never necessary to send a man out to rewick or keep them in running order.

The **Patent Wick Control** makes it impossible for a careless operator to turn up too high or for smoke to be produced.

The **Solid Flame Spreader** without perforations prevents clogging up with the result of bad odors.

The **Workmanship and Finish** are a delight to the eye, and the general utility of these heaters is beyond competition.

These are the heaters which mean money for the dealer because by their strong, practical merit they sell themselves—they stay sold, and every sale is a seller because it creates new customers.

So far this year the demand is double that of last year. Send us your orders early—now. Ask for a supply of our descriptive book, pass them out to your customers, every book sells a heater, and we supply the books to you without cost. Every one guaranteed, and our guarantee is not a promise but a fact. It means money back if a heater should prove unsatisfactory.

NEW IDEA IN SHOVELS

THE SPLIT HANDLE

Advantages over old style:
1. GREATER STRENGTH
2. LESS WEIGHT
3. MORE ROOM FOR THE HAND

The handle is split at the top to form a D, and is made wider than the ordinary D handle, giving more room for the hand.
The hand piece is rabbited into the side pieces and held together by a rivet passing through them. The rivet at the bottom of the D prevents the handle from splitting downwards.
When ordering, specify Split D handles, as we furnish them on all shovels, spades, etc., without extra cost.

DISSTON PROGRESS

1840. Henry Disston made but *few* saws a day.

1850. Made *some* dozens each of various kinds of saws per day.

1860. The Disston Saw Works turned out *hundreds of dozens* of saws per week.

1865. Factory destroyed by fire—rebuilt immediately.

1870. Sales increased to *thousands of dozens* per month. Factory again destroyed by fire and rebuilt.

1880. Mounted up to *tens of thousands of dozens* per month.

1890. Leaped to *hundreds of thousands of dozens* per year.

1900. *Millions* of saws of various patterns were made and *sold*.

1910. Sales still increasing and the demand for Disston brand of saws and tools unprecedented.

THE REASONS: Integrity, persistence, courage, enterprise, knowledge, all united in a constant effort to manufacture and deliver the *best* saws for every purpose which it lies within human power to produce.

HOLLOW POINT BULLET

A NEW FEATURE IN METALLIC AMMUNITION

The hollow point increases the shocking and killing power of the bullet because of the greater mushrooming qualities over the solid lead bullet.

HOLLOW POINT BULLET
(Before Firing)

HOLLOW POINT BULLET
(After Firing)

SOLID BULLET
(Before Firing)

SOLID BULLET
(After Firing)

.44 CALIBRE

Note the cross section of the unfired hollow point bullet and its mushroomed appearance as compared with the solid bullet after being fired. Sportsmen can increase the efficiency of their rifles and revolvers in game shooting by using hollow point bullets at a trifling added cost over the old solid bullet.

UMC hollow point lead bullets come in the following sizes:

.22 Short, Hollow Point, Black and Smokeless.
.22 Long, Hollow Point, Black and Smokeless
.22 Lon Rifle, Hollow Point, Black and Smokeless.
.25 Stevens, Hollow Point, Black.
25 Stevens Short, Hollow Point, Black
.32 Winchester, Hollow Point, Black and Smokeless.
.38 Winchester, Hollow Point, Black and Smokeless.
.44 Winchester, Hollow Point, Black and Smokeless.

INCREASE YOUR SALES BY BEING THE FIRST TO INTRODUCE THE HOLLOW POINT BULLETS IN YOUR CITY

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

How We Are Specialists

Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

"Our Plan"

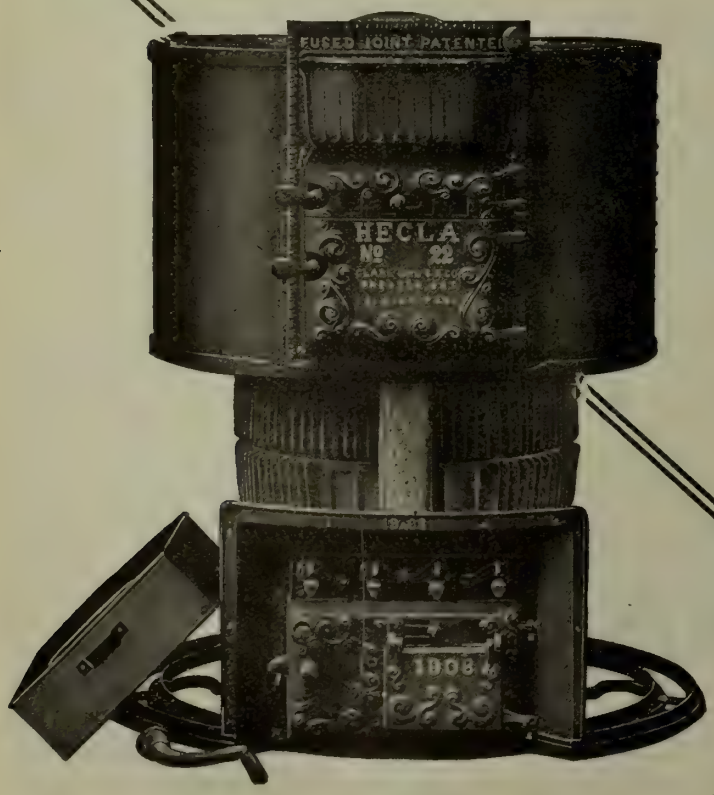
We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.

We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.

MALLEABLE IRON RANGE CO.
Beaver Dam, Wisconsin

THE "HECLA" Warm Air Furnace

spells WINTER COMFORT for your customers!



Looked at from any point of view, no heating apparatus gives the same amount of comfort at an economical cost of heating as a "HECLA."

Here are a few features of the "HECLA" that help to give it its merited prominence:—

HECLA FUSED JOINTS prevent any gas, dust or smoke getting into the air chamber, and are the only known joints that promote this happy consummation.

HECLA INDIVIDUAL GRATE BARS save time and labor. Each bar is shaken separately and no poker is needed.

HECLA STEEL RIBBED FIRE POTS have more than three times as much radiating surface as any other pot. Give more heat for fuel consumed, and are practically indestructible.

HECLA CAST IRON COMBUSTION CHAMBER much more durable than a steel chamber.

May we send you a copy of our new catalogue, fully describing the many distinctive features of the HECLA?

Write for a copy to-day.

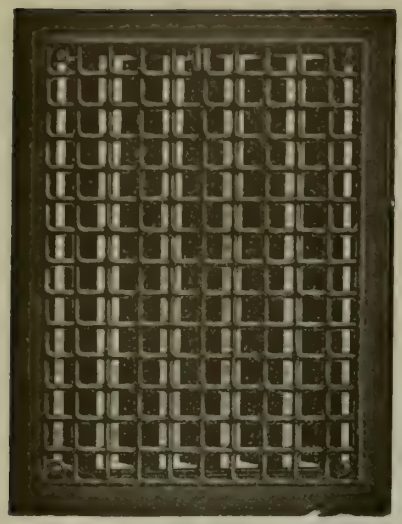
MONARCH DIAMOND

HIGH GRADE THE DIAMOND LINE RIGHT PRICE

Planished Steel Ranges

It will pay you better profits than any other because Monarch Diamond Ranges have exclusive points of construction that appeal irresistibly to careful householders.



They burn any kind of fuel. They have large, roomy ovens that cannot warp or be in any way affected when in use by cold air currents along the floor or elsewhere. The BODY s THREE-PLY—two layers of heavy steel between which s a layer of asbestos. The FIRE-BOX is splendidly proportioned and is fitted with easily-removable duplex grate bars. The Front Key Plate is hinged, allowing access to fire for broiling, etc. Reservoir holds three pails of water, is made of heavy planished steel retinned inside. Fire Door is extra large; takes in rough wood; it is made double, outside nickel which does not tarnish.

You will look a long time before you come across any range equal in value to the Monarch Diamond.

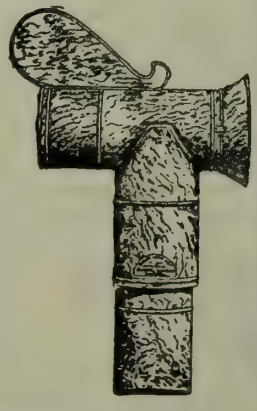
"It Saves Lives"
"A Building Necessity"

These are the expressions that have been made synonymous with the



J. W. HARRIS VENTILATOR

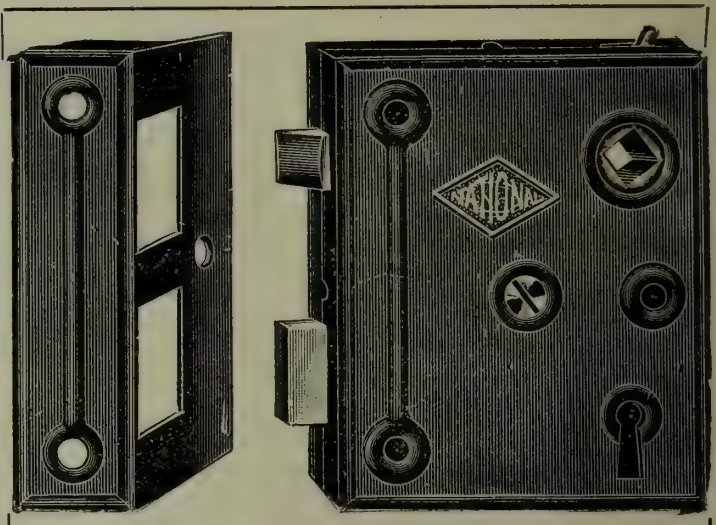
We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

QUEBEC, DEC. 18th, 1905



J. W. HARRIS MFG. CO., LTD.,
Montreal.

DEAR SIRS:—

The Ventilator referred to in your favor of 27th, which was used to ventilate galley of our "S.S. King Edward," has given entire satisfaction.

Yours truly,
HOLLIDAY BROS.,

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Ridging No. 872 is a Good Seller.
It's Galvanized Steel at a "Wood-Price."

An energetic hardware dealer can sell a good many lengths of Ridging No. 872 in a season. Very few will choose to erect an ordinary wood ridge when the advantages of No. 872 are explained to them. For one thing it is much more ornamental than wood. And because it is made of galvanized steel, it is also several times as durable as wood. No. 872 is easy to erect. It is made on special machinery, in ten-foot lengths, and is absolutely straight. The lengths fit together accurately. No wood filler is required. And you can sell No. 872 at practically the same price as an ordinary wood ridge. How many lengths are you going to sell during the remainder of the year? There's a good margin of profit for you in each sale you make.

MISCELLANEOUS

ADDING TYPEWRITERS write, add or subtract in one operation. Elliott Fisher, Limited, Room 814, Stair Building, Toronto.

ACCURATE COST KEEPING IS EASY if you have a Dey Cost Keeper. It automatically records actual time spent on each operation down to the decimal fraction of an hour. Several operations of jobs can be recorded on one card. For small firms we recommend this as an excellent combination—employees' time register and cost keeper. Whether you employ a few or hundreds of hands, we can supply you with a machine suited to your requirements. Write for catalog. International Time Recording Company of Canada, Ltd. Office and factory, 29 Alice Street, Toronto.

ANY MAN who has ever lost money in the mails has had occasion to learn by painful experience that the only proper way to remit money is by Dominion Express Money Orders and Foreign Drafts. In case of loss or delay prompt refund is arranged or new Order issued.

COUNTER Check Books—Especially made for the hardware trade. Not made by a trust. Send us samples of what you are using, we'll send you right prices. Our holder with patent carbon attachment has no equal on the market. Supplies for Binders and Monthly Account Systems. Business Systems, Limited, Manufacturing Stationers, Toronto. (tf)

COPELAND-CHATTERSON SYSTEMS — Short, simple. Adapted to all classes of business. Copeland-Chatterson-Crain, Ltd., Toronto and Ottawa. (tf)

DOUBLE YOUR FLOOR SPACE—By installing an Otis-Fensom handpower elevator you can use upper floor as stock room or extra selling space and increase space on ground floor. Costs only $70. Write catalogue "B," Otis-Fensom Elevator Co., Traders Bank Building, Toronto.

DISPLAY YOUR GOODS to better advantage by using up-to-date fixtures. We are specialists in planning stores and offices. Get catalogue "J." which contains illustrations of many new features and several handsomely equipped stores and offices. Jones Bros. & Co., Ltd., 30-32 Adelaide Street W., Toronto.

EGRY BUSINESS SYSTEMS are devised to suit every department of every business. They are labor and time savers. Produce results up to the requirements of merchants and manufacturers. Inquire from our nearest office. Egry Register Co., Dayton, Ohio; 123 Bay St., Toronto; 258½ Portage Ave., Winnipeg; 308 Richards St., Vancouver. (tf)

ERRORS AVOIDED, LABOR SAVED—Using the Shouperior Autographic Register. Three copies issued at one writing. 1st, Invoice; 2nd, Delivery Ticket; 3rd, Charge Sheet, perforated for filing. No handling of carbons. High grade printing and neat invoices. Make full inquiry. Autographic Register Co., 191-193-195 Dorchester St. E., Montreal. (tf)

EVERY retail merchant should write for a copy of our finely illustrated catalogue of rebuilt typewriters. It shows the best typewriter bargains ever offered in Canada. Moreover, it contains facts on retail advertising intensely interesting to retail merchants. It is free. The Monarch Typewriter Co., Ltd., 98 King St. West, Toronto; also Montreal, Hamilton, London, Ottawa.

FIRE INSURANCE. INSURE IN THE HARTFORD. Agencies everywhere in Canada.

FOR FILING PAPERS, LETTERS and vouchers, fastening bulky envelopes or backing statements the ACME No. 2 Binder is indispensable in every store. Penetrates the thickest paper and perforates and binds in one operation. For sale by all stationers. A. R. MacDougall & Co., Canadian Agents, Toronto.

GET THE BUSINESS; INCREASE SALES—Use Multigraph Typewritten Letters. Three thousand per hour produced on Multigraph. The Multigraph does every form of printing. Saves 25 p.c. to 75 p.c. of printing bills. Multigraph Office Forms, Letterheads, Circular Letters. Write us. American Multigraph Sales Co., Ltd., 129 Bay Street, Toronto.

IF you have been afflicted with one of those Fountain Pens that won't write when you want it to, or leaks when you don't want it to, give it to one of your poor relations and buy a Moore Non-Leakable Fountain Pen and you will be happy. Consult your stationer. W. J. Gage & Company, Toronto, Sole Agents for Canada.

KAY'S FURNITURE CATALOGUE contains 160 pages of fine half-tone engravings of newest designs in Carpets, Rugs, Furniture, Draperies, Wall Papers and Pottery, with cash prices. Write for a copy—it's free. John Kay Co., Ltd., 36 King St. West, Toronto.

KEEP ACCOUNTS WITHOUT BOOK-KEEPING. Formerly accounting meant keeping books. Today you can keep accounts cheaper, better, quicker and more accurately by discarding all books and installing a McCaskey Account Register. Don't be skeptical—investigation costs nothing. Write to-day. Dominion Register Co., Ltd., 100 Spadina Ave., Toronto.

MODERN FIREPROOF CONSTRUCTION. Our system of reinforced concrete work—as successfully used in any of Canada's largest buildings—gives better results at lower cost. "A strong statement," you will say. Write us and let us prove our claims. That's fair. Leach Concrete Co., Limited, 100 King St. West, Toronto.

PROBABLY the most talked about machine in Canada is the Hainer Book-keeping Machine. It combines in one machine the cash and credit register, time recorder and account register. Representatives wanted everywhere. Write for our proposition. Book-keeping Machines, Limited, 424 Spadina Ave., Toronto. (tf)

SAVE 50% OF COST of handling merchandise by installing a Beath System of Overhead Carriers. Saves valuable floor space because the trackage is on the ceiling. Systems for all kinds of businesses, large or small. Write us for illustrated catalog. W. D. Beath & Son, 193 Terauley St., Toronto. (tf)

SCOTCH PLAID STATIONERY is the latest creation for business and society correspondence. Paper and envelopes present a finished linen surface, most agreeable to the pen touch. Leading stationers have it. Write for samples. The Copp, Clark Co., Ltd., Toronto. (tf)

Paint and Varnish Removers.

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish *in* Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	Name of Brand.
The Sherwin-Williams Co., Montreal, Canada.	**"Taxite"**
International Varnish Co, Ltd., Toronto, Canada	**"Klensa"**
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	**"Expedite"**
British American Paint Co., Victoria, B.C.	**"Bapco"**
Mount Royal Color and Varnish Co., Montreal, Canada	**"Scrape-off"**
James Robertson Co., Ltd., Toronto, Canada	**"Robertson's Paint and Varnish Remover"**
Sanderson Pearcy Co, Ltd., Toronto, Canada	**"Devolite"**
Stewart & Wood, Toronto, Canada	**"Solvo"**
Martin-Senour Company, Ltd., Montreal, Canada	**"Martin-Senour Paint and Varnish Remover"**

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

Genasco
Ready Roofing

Of all the ready roofings now offered for sale Genasco is the only roofing whose makers come out boldly and tell you what it's made of—

Trinidad Lake Asphalt

Why do other makers throw mystery around their product by "secret process" or "our own composition"? Mystery is a mighty poor creator of sales.

Genasco stands out among all these roofings, and proves its waterproof and weather-resisting qualities.

That's the kind of roofing your customers want. They know Trinidad Lake Asphalt is the greatest waterproofer known; and they know our thirty years' experience in the use of asphalt is back of Genasco—a guarantee that it will give them absolute satisfaction.

That's the roofing you ought to handle. Needn't worry about being able to sell it. We've got all we can do to keep up with the demand.

Write us for full information. Don't delay. Do it to-day.

A View of the Grounds of The Canadian National Exhibition When the Crowd Was Large.

Canada's Great Exhibition is Climbing Upwards

An Increase in Numbers of Almost 100,000 People in Spite of Some Extremely Bad Weather—World's Fair Suggested for 1914 to Celebrate Peace Centenary—A Truly National Exhibition—Many Fine Exhibits of Special Concern to the Retail Dealer—West India Products Displayed.

Toronto, Sept. 15.—Canada's National Exhibition this year triumphed over many obstacles and achieved another distinct success, despite the unusual incident of adverse weather conditions.

This is evidenced by the fact that the total attendance was 837,000, about 85,000 in excess of 1909 and almost 200,000 in excess of 1908. This is a phenomenal increase in view of the disappointment of Labor Day when excessive rain kept the attendance 54,000 below that of Labor Day alone last year. The surplus is estimated at $45,000, so that there can be no question of the greatness of this greatest of continental annual events.

The Peace Centenary.

There is considerable stir just now over the proposal to celebrate in 1914, in Toronto, the hundred years of peace between Great Britain and Canada on the one hand and United States on the other, and it is suggested that the grounds and buildings of the Canadian National Exhibition be utilized as the site for a World's Fair under the supervision of an International Commission representing the countries named.

It is claimed that from an historical standpoint the suggestion is a good one. For it was on the grounds on which the National Exhibition is annually held that one of the bloodiest engagements of the war of 1812-14 was fought. At the close of that struggle the capital of Upper Canada fell into the enemy's hands, and its public buildings were burned. an act that led to the historic justice meted out in the burning of the public buildings at Washington by a British squadron. The mingled dust of British soldiers, United Empire Loyalists, and stout New England Republicans who fell at the battle of York rests to this day beneath the soil over which every year hundreds of thousands of pleasure-seekers walk unheeding. It is therefore sacred soil fit to teach the highest lessons of patriotism to those who may attend the Fair of a Century of Peace.

Whether this comes to pass or not the Canadian National Exhibition will go down through the annals of history as one of the greatest, if not eventually the greatest of similar annual fairs in the whole world.

That it is National is proven by the interest the other provinces of the Dominion take in it. We have British Columbia in the far west proudly showing the products of her soil. Her fruits are among the finest the world produces and they were admirably displayed. Alberta, Saskatchewan and Manitoba—the vast prairie lands of the west—are now being looked up to as among the greatest of the world's wheat producing districts, while only a few years ago that earth resounded with the tramp of the majestic buffalo. They were represented at the Exhibition with their "No. 1 Hard Wheat" and other examples of western progressiveness.

The products of Ontario's fields, orchards and vegetable gardens were displayed in commanding manner while Canada's mines showed forth their greatness. Quebec and the Provinces-down-by-the-Sea sent their quotas of exhibits and people and all have reason to feel elated at the culmination of this great event.

Demonstrations Were Popular.

For visiting hardwaremen, interest centred chiefly in the Industrial Building, where most of the stove, paint, plumbing and lighting fixtures displays were located.

The stove section has been materially enlarged and now takes up most of the space of the two northerly divisions of the Industrial Building, exhibits of metals and cooking utensils being grouped together near the stoves.

One of the most important lessons for hardwaremen to study at the Exhibition were the methods used by exhibitors to display and demonstrate their goods. It was interesting to watch the salesmen in the stove exhibits, for instance, and study their approach to a customer, their drawing out of what the visitor needed, their method of showing the points of the range and closing a sale. Some of the Toronto agents for several of the stove manufacturers were particularly successful in making sales as a result of their work at the stove displays.

A demonstration of fireless cookers was the centre of a crowd at all times, while in another booth across the aisle the same cooker was displayed and attracted little attention. Not long ago the only manufacturer of fireless cookers in Canada stated that he had only sold 100 fireless cookers in this country in a year's campaign. Yet the salesmen who assisted the demonstrator referred to sold 22 of the cookers in the two weeks at the Exhibition.

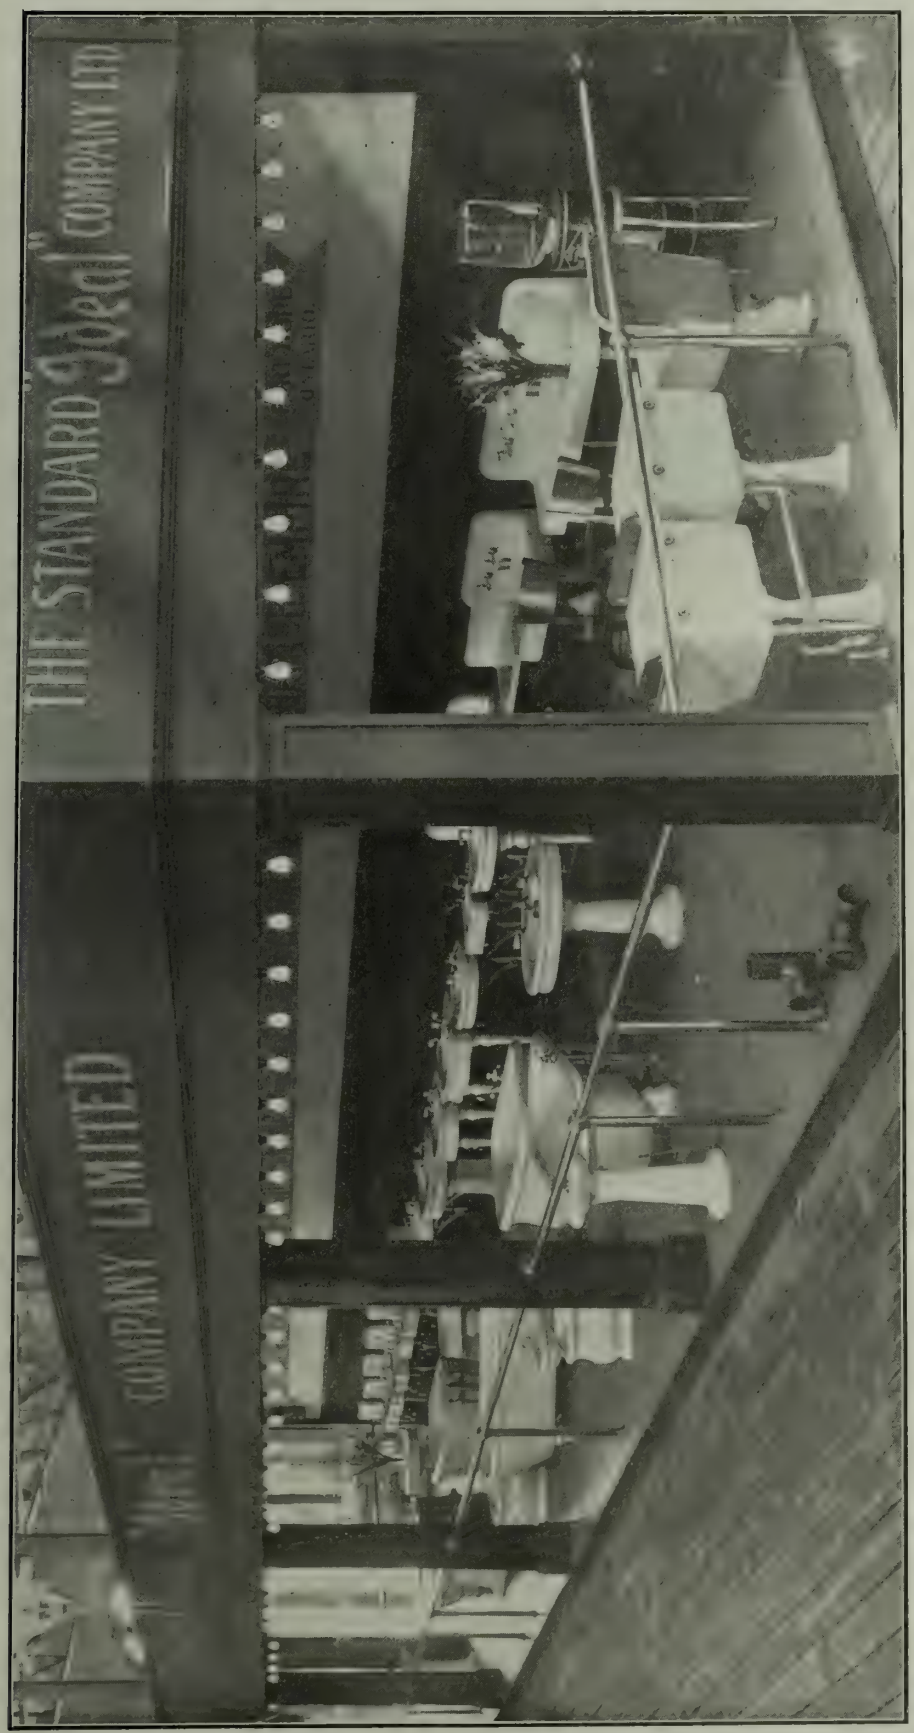
Demonstrations of varnishes, washing machines, fireless cookers, range boilers and other articles sold by hardwaremen were also made with most satisfactory results.

"J.M.T." BRASS GOODS.

Lighting fixtures were the chief feature of the exhibit of the James Morrison Brass Mfg. Co., Toronto, in the Industrial Building this year, though plumbing goods and engineers' brass work was also prominently displayed. Last year's change from Machinery Hall to the Industrial Building having proven very satisfactory, the same booth was used this year as in 1909, it being one of the most prominent corners in the very centre of the Industrial Building, midway between the Stove and Process sections.

The number of plumbing fixtures shown was not as large as a year ago but their prominent position brought this branch of the Morrison business to the front and impressed upon hardwaremen and plumbers who visited the display that both in enamelware and brass goods for plumbers the Morrisons are in the front rank. Several types of lavatories were shown along the wall with beveled plate glass mirrors, shelves and bathroom fittings hanging above. And in a prominent position in the foreground a large silent salesman was used to display an elaborate line of plumbers' brass goods in both brass and nickeled finishes. Included in the case were bath fittings, stop and waste cocks, fuller and compression work, valves, and other fittings required for plumbing work and water services.

Hanging from the ceiling and wall and resting on tables and desks were dozens of handsome electric lamps and lighting fixtures, there being some particularly beautiful domes for dining rooms and dens, and clusters of lights for halls, drawing and living rooms. Some very artistic wall brackets were shown. The brass work on all was of the highest class, brass chains being favored for the hanging fixtures. The finishes were of many styles as in addition to the usual polished brass, black iron, brush brass and lemon brass, fixtures were shown in oxidized brass, oxidized copper, antique brass, polished nickel, gun metal, bronze metal, oxidized silver and verde antique (green). Innumerable styles and designs of shades were used to complete the fixtures, the artistic construction of some of the shades bringing forth expressions of admiration from many who were looking for "classy" lighting fixtures.



An electric grate, finished in light hammered brass, combined both artistic and utilitarian qualities, and was also the subject of much favorable comment.

In engineers' brass work the Morrison display was even more complete than in former years, the display being shown off to splendid advantage by the dark background. Marine brass work is a specialty of the James Morrison Brass Mfg. Co. and the equipment they make includes everything for both pilot house and engine room brass work. Steam gauges, steering wheels, motor boat, engine and locomotive mountings, Hancock inspirators, J. M. T. Valves, locomotive injectors, oil cups, whistles, fire nozzles and hose couplings, were a few of the articles shown.

S. H. Hadley, A. Betton and James Fiddes, salesmen in Western Ontario, Eastern Ontario and Toronto, were in charge of the exhibit.

CANADIAN NATIONAL EXHIBITION.—Brilliant Display of Lighting Fixtures by the James Morrison Brass Mfg. Co.

CANADIAN NATIONAL EXHIBITION.—Magnificent Display of Enamelware Made by Standard Ideal Company.

BATH ROOM EQUIPMENT.

The large permanent stand of the Standard Ideal Mfg. Co., Port Hope and Toronto, in the Industrial Building, was one of the centres of attraction for the scores of master plumbers who attended the Toronto Exhibition this year, and many of the delegates to the Master Plumbers' Convention, made the exhibit their headquarters when at the grounds.

Some of the delegates, too, placed good orders for Standard Ideal products when here, being attracted by the excellence of the articles shown. One of the fine new Alexandra ware baths, for instance, was purchased by E. J. Young, of Calgary, for the display room in the fine new building nearing completion for the E. J. Plumbing Co., Limited.

From the experience of those in charge of the display it is certain that the display of the fine line of goods manufactured by the Standard Ideal Co. is of benefit to master plumbers. Intending builders see and take a liking to fixtures which they would not otherwise know about, with the consequent result that when the plumbing contract is let it includes specifications for a higher quality of fixtures which, of course, carry a higher percentage of profit for the plumber than the ordinary fixtures would.

As in last year's display the central feature of the display was the "Alexandra" line of high-grade porcelain enamelware, about a score of "Alexandra" baths, lavatories and other fixtures being shown. Included in these were many new designs and improvements, the most important of these being a double basin lavatory specially constructed for club house use or for where both hard and soft water is used.

Also included in the "Alexandra" display were such fixtures as water closets, sitz baths with bidet attachments, pedestal child's baths, manicure and dressing tables, several of the baths being hand decorated.

In design the "Alexandra" fixtures would pass anywhere for solid porcelain but they are in reality of greater serviceability and command a higher price than solid porcelain ware. It has taken an enormous investment to prepare the drawings and master patterns for "Alexandra" ware and some of the fixtures have required an investment of thousands of dollars before a single article was manufactured. It has been their aim, however, to produce on Canadian soil the highest quality of bathroom equipment known, so that it will be unnecessary to import from foreign countries, and their exhibit proves that they have succeeded and are now able to supply the demand for both high-class and reasonably priced fixtures.

A wide variety of lavatories, bubble fountains, kitchen and slop sinks, drain boards, laundry tubs, etc., completed the display, while samples of the "Impermeable" enameled soil pipe were shown along with samples of the company's ordinary soil pipe.

Wm. Linton, Ontario salesman, was in charge of the booth, but H. T. Bush, general manager of the company, Port Hope, and A. D. McArthur, Ontario sales manager, spent considerable time at the exhibit renewing friendships with customers.

METALS FOR HARDWAREMEN.

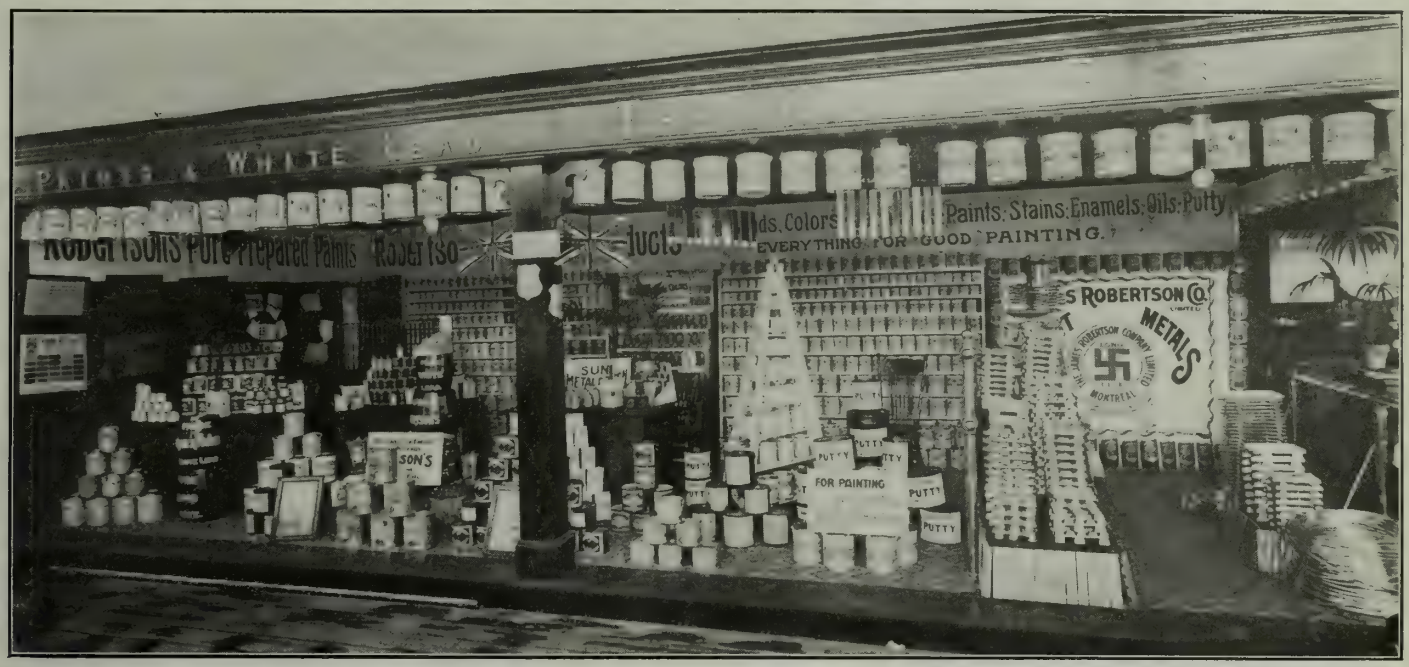
A nine-foot high man, with curly hair, moustache, collar, cuffs and buttons—all quite natural but made of sheet metal was the first object to attract the attention of the visitor entering Machinery Hall. With arm outstretched it pointed to the exhibit of the Canada Metal Co., where were displayed samples of metals used by manufacturers of almost everything under the sun. W. G. Harris, Sr., general manager of the company, was in personal charge of the display.

For the hardware trade there was shown Harris' Heavy Pressure Bearing Metal, which the company claims is without doubt the best babbit for the hardwareman to handle, as it gives satisfaction to every customer, and is sold only to the trade. A bell of Imperial Genuine babbit was a novelty. It was shown so that spectators could hear the sound, the absence of lead allowing the metal to ring and making the company's guarantee mean something.

Imperial Genuine Bearing Metal lays claim to being the highest grade high speed metal made—for heavy engine and extraordinary hard work. When melted it flows freely, and will not shrink. It is very hard and durable, tin being the basis, mixed with antimony and nickel for hardening, and being toughened with pure copper. It contains no lead. To obtain the best results from "Imperial Genuine," use a ladle or pot and pour very hot, avoiding red hot metal, which is overheated. For best results keep the

Mr. W. G. Harris.

metal pure and separate from others. The metal may be poured indefinitely, and will not deteriorate.



Besides these two grades there are "Imperial Tough," for thin bearings; "Armature Special," for heavy street railway armature linings; "White Brass," for marine bearings; "Metallic Genuine," for heavy pressure work, a medium grade between "Imperial" and "Harris Heavy Pressure"; "Hercules Genuine," suitable for heavy machinery and friction clutches; "White Bronze," a medium priced babbitt, copper hardened; "Aluminoid," serviceable on all light machine work.

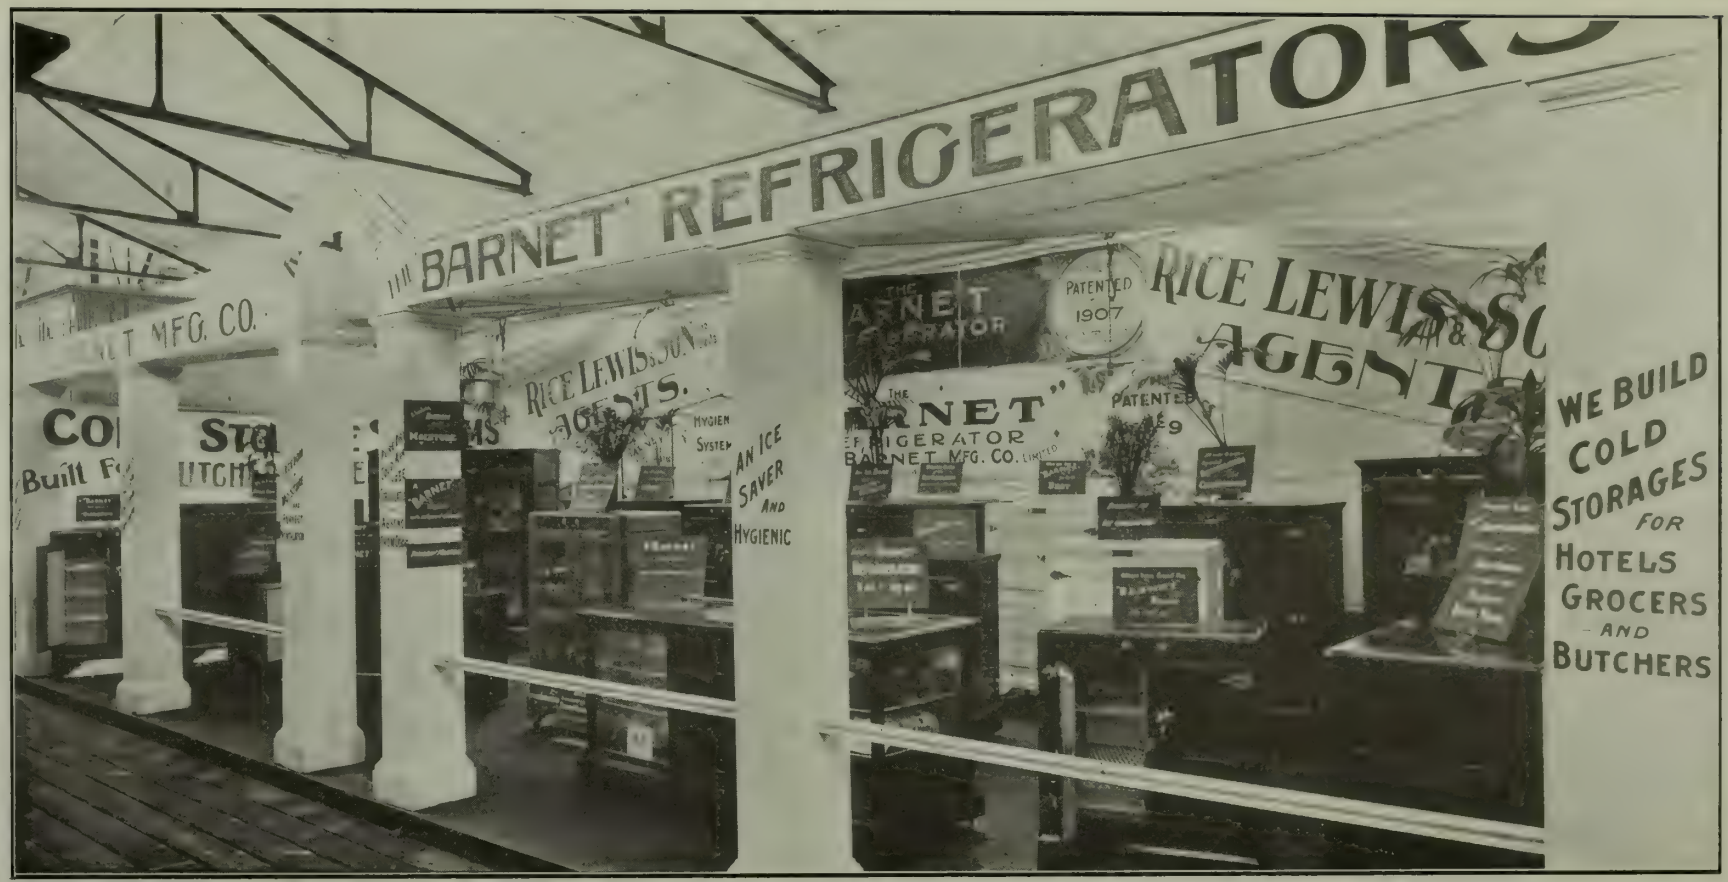
The Canada Metal Co. is now running two factories in Toronto—William Street (head office) and the Fraser Avenue works. In keeping with the general tendency of business most of all the babbits now coming out of the company's factories are done up in clean neat paper packages. So great has been the demand for babbit metal made by the Canada Metal Co. that a new pot capable of holding 25 tons has been added to the equipments of the plant.

A large revolving table showed up the various metal products of the company. There were displayed a considerable number of aluminum castings this year, the company making a specialty of patterns in aluminum. They are also pushing brass foundry work, lead pipe, solder, lead waste, traps and bends, lead fibre, lead sash weights, ingot copper and tin, lead washers, in fact almost everything in the metal line handled by hardwaremen was shown in the company's display.

CANADIAN NATIONAL EXHIBITION.—Where the Canada Metal Co. Showed "Everything in Metals."

CANADIAN NATIONAL EXHIBITION.—James Robertson Co.'s Paint and Metal Display.

ROBERTSON'S PAINTS AND METALS.



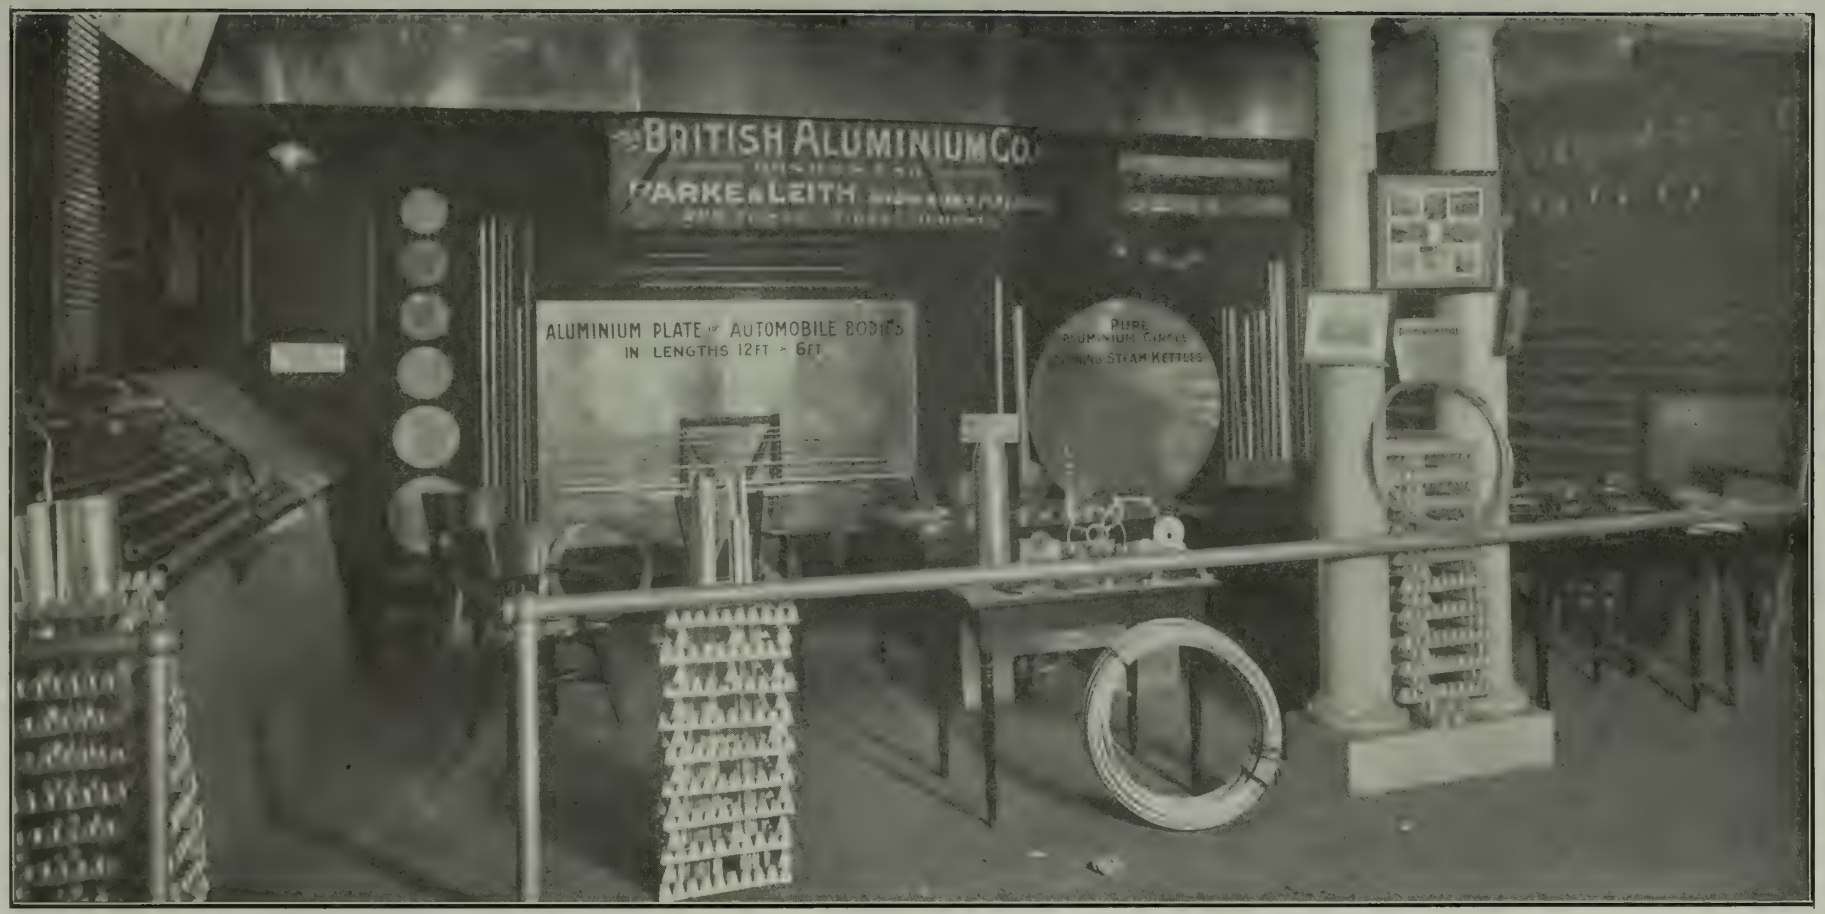
As in former years the James Robertson Co., Toronto, again had a fine display of their wares near the main entrance to the Industrial Building, the display being divided into three sections —plumbing supplies, metals and ready-mixed paints.

Robertson's high-grade paint products was a most complete display of the many staples and specialties manufactured and sold by this department of the Robertson business. Pyramids of white lead and putty kegs and cans, tables with samples of stains and enamels, furniture and metal polishes, cement fillers, Togolac and other specialties, helped to make up the exhibit, along with a variety of colors shown in bottles on shelving, and in the rear a large stock of Robertson's ready-mixed paints, carriage, barn and bridge paints. Cookson's genuine English white lead, the leader on the English market, and for which the Robertson Company have established a large demand in Canada, was also prominently featured.

Robertson's copperized metals occupied a prominent position in the display "Swastika" and "King" babbit metals being featured as containing the acme of pressure and speed in anti-friction babbit metals. Samples of the high grade solder and lead pipe made by the company were also shown.

CANADIAN NATIONAL EXHIBITION.—James Roberson Co.'s Display of Bathroom Equipment.

CANADIAN NATIONAL EXHIBITION.—Barnet Mfg. Co.'s Elaborate Refrigerator Display.



THE BARNET REFRIGERATOR.

The Barnet Mfg. Co., Renfrew, Ont., had a display in the Industrial Building which more than duplicated the successful exhibit of a year ago. For the "Barnet" refrigerator the claim is made that it "has no equal on the market." "A refrigerator that breathes" is the company's taking slogan. It has a free and perfect system of ventilation and circulation of cold, dry air, as was proved by the tests made at Toronto, Ottawa, Winnipeg, Victoria, Brandon, Regina and New Westminster fairs last year when a quantity of milk, fish, meat, onions, butter, cheese, apples, tomatoes, celery, oranges, lemons, bananas, matches and salt were locked and sealed in a refrigerator for 96 hours. When the refrigerator was opened the milk was found to be sweet; the vegetables and fruit were firm and had not imparted their odor to anything; and the salt and matches were dry, the latter striking and lighting on the inside lining of the ice closet.

The "Barnet" refrigerator is constructed on scientific principles and is the product of many experiments in that direction. It is hygienic; has a continuous current of pure dry air; is free from moisture; is clean, and easy to keep clean; its temperature is low and uniform—38 to 48 degrees; it is economical in ice consumption; and the interior linings are of snow-white baked enamel. In insulation there are eight walls to protect the ice and maintain a low uniform temperature inside.

The basic principle of odorless refrigeration calls for such arrangements of circulation and ventilation as will conduct the freshly-chilled air in regular channels. The "Barnet" system ensures a continuous circulation of dry air in the refrigerator. The cold air in the ice chamber descends to the bottom, striking a slant and being directed through the bottom of the provision chamber. It then ascends through the wire shelves and around the provisions, is drawn off through the syphons to the ice where the different odors are deodorized. By this system an unbroken stream of pure, dry, cold air is constantly circulating through the refrigerator, passing around the foods, cooling them and driving out all smells, thus leaving the contents in the refrigerator sweet, pure and cool and preserving them in a hygienic atmosphere.

Besides the "Barnet" this company makes as well the "Ontario," a cheaper refrigerator, which for ordinary purposes is claimed to work very satisfactorily. Considering their price the "Ontario" is splendid value. All the refrigerators made by the company are constructed of ash, birch or oak. They also build on special orders cold storages for hotels, grocers, butchers and restaurants.

CANADIAN NATIONAL EXHIBITION.—British Aluminium Co.'s Exhibits of Ingots, Plates and Wire.

BRITISH ALUMINIUM.

One of the most interesting and instructive displays at the Exhibition this year was that in Machinery Hall of Parke & Leith, general agents in Canada for the British Aluminium Co., Ltd. This company, which claims to be the largest producer of aluminium in the British Empire, has extensive works at Kinlochleven and the Falls of Foyers, Inverness, Scotland; Stangfiord, Norway, and Orsieres, Switzerland, carbon works at Greenock, Scotland, and rolling mills at Milton, Staffordshire, England.

The metal is produced from a species of clay termed "Bauxite," obtained from extensive deposits owned by the company in the south of France and at Larne, County Antrim, Ireland

The enormous increase in the industrial use of this until recently almost unknown metal is one of the most remarkable instances of rapid development of an extensive modern industry.

In the form of ingots, sometimes termed "pigs," aluminium is used either pure or alloyed with copper, zinc, tungsten, etc., for the manufacture of castings, combining lightness, strength, durability and fine appearance. Aluminium castings in many branches of industry have already taken the place of brass and copper on account of their relatively lower cost.

The uses of sheet aluminium are so many and so varied that to give a complete list would involve a survey of almost every known industry in which metals are used. The sheet is well adapted for spinning, drawing and stamping processes such as are employed in manufacture of cooking utensils and hollow-ware of all kinds.

As a substitute for copper, brass and iron, aluminium finds a large field in the form of tubes, the metal being very ductile and tough. It also has the advantage of being practically non-corrosive, except when subjected to the action of hydro-ehloric acid or caustic soda. On account of the high thermal conductivity and efficiency, aluminium tubing in heaters cannot be surpassed by any other metal Seamless drawn tubes can now be supplied in any gauge, and in any diameter from 1-16 in. to 6-inch, and in lengths up to 14 feet, and in round, square, rectangular and other sections.

The widespread adoption of aluminium as a substitute for copper for electric transmission lines, electric railway feeders, electric power circuits, etc., is now so great that comment is almost superfluous.

Parke & Leith, 205 Yonge St., Toronto, will be pleased to answer enquiries from any readers of Hardware and Metal who may require further information in regard to the uses of the metal, and as they have a large stock of the metal at their warehouse in Toronto, in all the various industrial forms, they can fill orders promptly.

ASBESTOS CEMENT SHINGLES.

In and on a small building erected of their own materials near the Machinery and Industrial Buildings the Asbestos Manufacturing Company, Montreal, Que., had a display which interested all connected with the hardware and building trades, the materials used in the construction of the building being Asbestos Building Lumber and Asbestos Cement Shingles, of which over 200,000,000 were sold in 1909 in the United States. The beauty and utility of the asbestos cement shingles attracted the attention of thousands of visitors during the two weeks of the Exhibition.

The great invention of a unique process for the practical production of a new fireproof building material, which invention has been patented in many countries and which material is so well known throughout all civilization, composed as it is entirely of Asbestos fibre and hydraulic or Portland cement, marks an epoch in the building industry, and a new birth in the matter of fire protection, so far as fire construction is concerned.

Perfectly fireproof and not affected by continuous moisture, frost, or subject to deterioration by the elements in any way it is obvious that Asbestos Building Lumber may be employed freely and confidently in a vast variety of places where ordinary wooden lumber has failed.

Primarily designed to replace the ordinary roof coverings only, its merits have been found so supreme that its employment by our best architects and engineers has extended to all classes of light constructive work wherein its many desirable qualities have supplanted other materials heretofore commonly in use.

It is perhaps superfluous to an educated person to say to him that Asbestos-Cement Shingles, Slates or Sheathing, made wholly of mineral fibre asbestos and hydraulic cement, are both fireproof and indestructible.

Both asbestos, or mineral flax as it is often called, from its peculiarity of crystallizing in fibres instead of in ordinary crystals, as is the usual case with mineral substances, and hydraulic cement have been known from the earliest times as among the most refractory of substances. The old Greek and Roman remnants of antiquity, composed largely of hydraulic cement, remain mute witnesses of this everlasting quality in this material. Asbestos fibre has remained exposed to the elements for unnumbered centuries without deterioration, while its well-known fireproof quality renders it the most suitable fibre upon which to agglutinate the cement deposited thereon in the course of manufacture. It is therefore evident, from the well-known natural qualities of these two materials, that nothing could have been selected that would have been more fire-proof, indestructible or everlasting than asbestos fibre and hydraulic cement as raw materials from which to prepare a permanent building material such as we have in Asbestos Building Lumber.

The Asbestos Building Lumber, composed of such a large percentage of Asbestos fibre, is naturally a tough material, not only for special work, but for ordinary building uses as well. Nails may be driven through it, by a quick sharp blow of the hammer, quite close to the edge without danger of fracture, Asbestos Building Lumber thus differing materially from all other sheathing materials in this important attribute of toughness and homogeneousness.

The main office of the Asbestos Manufacturing Co., Limited, is located at 705 Eastern Townships Bank Building, Montreal, and the factory—the only one of its kind in Canada—is located at Lachine, Quebec. Booklets and other information desired by hardwaremen who want to sesure agencies, can be had by writing to the address given.

CANADIAN NATIONAL EXHIBITION.—Asbestos Mfg. Co.'s Display of Shingles and Lumber.

WATER POWER WASHING MACHINES.

Cummer-Dowswell, Limited, Hamilton, made both a display and a demonstration of their power washing machines in the Industrial Building, four of the machines being connected up to the water pipes and a lady demonstrator being on hand to explain how dirty linen can be made clean without the wasteful expenditure of human energy.

In addition to the old favorites the "Velox" and "Ideal," the "New" Century water power" machine was shown, and it was universally conceded that this was a triumph in the making of thing entirely new in dolly washers. It has no fly wheels, gears, nor springs. absolutely nothing of an intricate or delicate nature. It has proven to be the simplest, lightest, easy running pin wheel machine ever devised.

Those living outside the cities and larger towns where the water conditions are not suitable for power washers were interested in the line of hand operated machines shown. These included the high grade "Flyer," "Snowball," "Triumph," "Re-acting" and "Sunlight." These machines are leaders in their respective types. Owing to lack of space the fine assortment could not be displayed, but dealers on Rolls are built up from specially treated shafts, coated with a pure gum cement, and then vulcanized as one piece. The result is that it is practically impossible for the rubber to break away from the shaft or peel—even with years of hard usage. The rolls are resilient and thoroughly durable, and dealers can have every confidence in selling them.

"Monitor" rotary lawn Clothes Dryers, "Leader" Churns and "Humpty Dumpty" egg crates were also shown and these three lines came in for special attention. "Leaders" were used exclusively in the butter making competitions in the Dairy Building,

The "Monitor" rotary lawn clothes

CANADIAN NATIONAL EXHIBITION. —Cummer-Dowswell's Display of Washing Machines and Wringers.

labor-saving household devices. The same splendid results can be obtained from it as from the "New Century" hand power washer, with the additional feature that it requires no operator.

The new motor mentioned in last year's exhibition number of Hardware and Metal is now perfected and about ready for the market. This motor is known as the "Bain," and is of the reciprocating type. Tests have demonstrated that the "Bain" washer will be the king of the dolly style power machines, it having greater speed and strength than anything yet shown. In the "Bain" and the "New Century Power," Cummer-Dowswell have two labor savers that cannot be surpassed.

The new rotary "Noiseless" is somerequest can quickly procure the company's 1910 catalogue, which illustrates and describes the 25 different kinds of washing machines they make.

A large assortment of clothes wringers formed an attractive portion of the display. Theese were shown in the high-grade "Arrow Brand," warranted for three and five years. Also "extra" and "Standard," guaranteed for two and one years respectively. With ordinary care these wringers will last five times as long as the warranty tags indicate.

In the rubber roll department of the Cummer-Dowswell factory, rubber is worked from the crude state, and they are not dependent on the manufactured article, which is decidedly uncertain.

dryer is an extremely handy device that saves many steps and much heavy lifting and other inconveniences in connection with the hanging out and drying of clothes.

Cummer-Dowswell, Limited, pride themselves on the quality, attractiveness and merit of their goods. Every machine is up to date, there are no obsolete patterns, and the material and workmanship is of the very best. Their "Arrow Brand" in connection wringers is a sure guide to the purchaser who wants something better than the rest.

Two officials of the firm, Geo. B. Dowswell, president, and F. T. Baine, secretary, were on hand to welcome the dealers and refer prospective purchasers to their local dealer.

CANADIAN NATIONAL EXHIBITION.—Berry Brothers' Exhibit of Fine Varnishes.

BERRY BROTHERS' VARNISHES.

The artistic exhibit of Berry Brothers, Walkerville, interested visitors not only by the taseful appearance of the structure, but by the handsome and instructive interior. The inside of the booth was handsomely paneled in natural woods, which are intended to show what Berry Brothers' Finishes will do in the way of a Finish. Visitors were noticeably impressed with the wonderful manner in which the grain and color of the various woods were developed and beautified.

The exhibit was one that appealed to the general public in a very practical and interesting way, as well as to painters and wood finishers. The interior finishing of a home is or should be one of great importance to the house builder, and the general public know so little about varnish generally that all practical knowledge of wood finishing should be regarded as a valuable mental asset. One of the pregnant points of interest made by Berry Brothers is the fact that it costs just as much to apply a poor varnish as a good one, and that while the good varnish will last indefinitely, the poor varnish will quickly perish or fade away and the job has either to go shabby or be done over.

Among other finished samples, Berry Brothers displayed numerous panels showing the remarkable finish produced by their Liquid Granite, which is intended for floors and other interior woodwork such as bathrooms, window sashes and sills, and other interior work that receives especially hard usage.

The finish shown on these samples develops the fact that it is so tough and elastic that if a sample is struck with a hammer or some blunt instrument, the wood dents under the blow, but the finish gives with it without cracking.

Berry Brothers make varnishes for every use under the sun, and almost everyone is interested to some extent at least in varnish and should know something about it. They have now a book in press called "Choosing your Varnish Maker," that should be in the hands of every possible varnish user. It is full of information and will be ready soon. Dealers who desire a supply to distribute amongst customers should send in their addresses at once to Berry Brothers, Limited, Walkerville, so as to ensure receiving a supply when the first edition is ready.

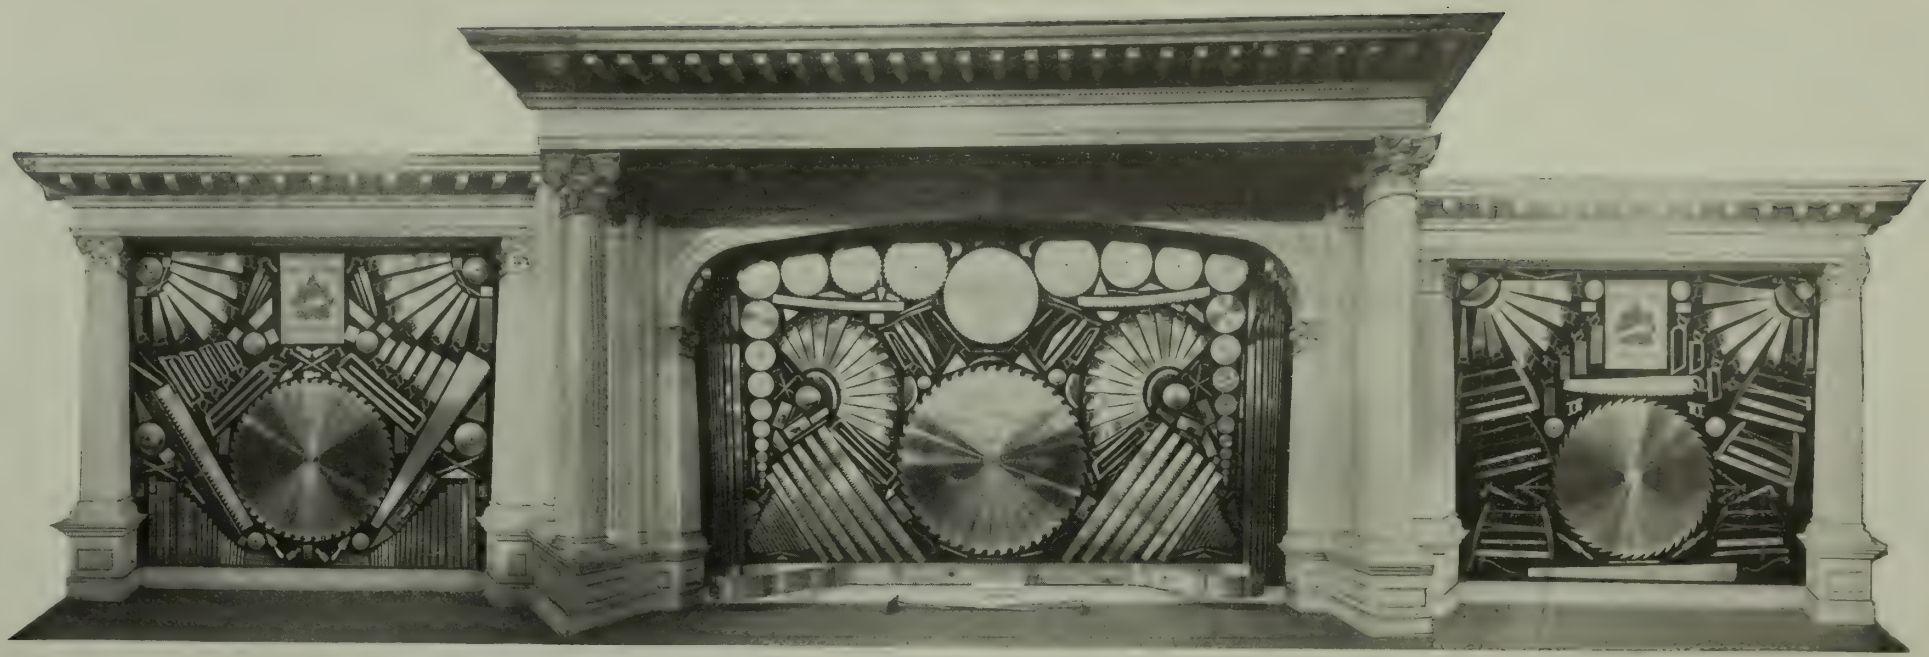
Berry Brothers are conducting an extensive magazine publicity campaign to assist dealers and in connection with this they supply window trims to connect the dealer's store with the magazine ads.

The exhibit was in charge of Frank Douglas.

CANADIAN NATIONAL EXHIBITION. —Store Front and Window Glass Display Made by Pilkington Bros., Toronto.

PILKINGTON'S GLASS.

The stand of Pilkington Bros., Limited, in the Process Building, formed one of the centres of attraction for those interested in building and in the glass business. Probably the first thing striking the eye was the model store front of plate glass, with the special brass dividing bars, making an ideal display window for any class of goods. To the transom lights, however, special attention should be drawn as the bevelled plate lights, with the chipped and gilded letters, formed a very pleasing alternative to the stereoptyed leaded transoms seen in almost every store.



But the hardwareman is probably more interested in the sheet glass proposition, and in this direction the qualities of the firm's manufactures were admirably displayed. The pyramid of sheet glass, built of reducing sizes from the base upward, showed the flatness and uniformity of thickness in addition to a quality that can only be obtained by careful labor. Besides the plain sheet there were also shown samples of enamelled, obscured, colored embossed and ornamental window glass and leaded windows for domestic and ecclesiastical buildings.

In the interior of the stand were shown the effects of the patent wired rolled glass and polished wired plate, which were displayed, together with a shattered sample showing this particular kind of glass as a sure preventive of the spread of fire and a safeguard against the possibilities of burglary. This rolled, cast and clear-polished wired glass is recommended to architects and others interested in buildings of fire-proof construction.

The company say that fire insurance companies make reductions in rates for buildings glazed with wired glass, as it is invaluable in warehouses and similar buildings where inflammable goods are stored, this description of glass holding together without breaking although it may become red hot. Wired glass also does away with the necessity of shutters, because it is difficult to break.

The rays of light which enter lower floors and basements through the prismatic glass are diverted horizontally, thus securing an even and natural illumination over the whole department.

The firm is an old established one, having branches in all parts of the world. Their head office and works are located in St. Helens, England. In Canada they have branches in Montreal, Toronto, Winnipeg, and Vancouver, where any of their manufactures can be obtained.

CANADIAN NATIONAL EXHIBITION.—Elaborate Display of Saws Made by Shurley-Dietrich Co., Galt.

SPLENDID SAW DISPLAY.

The exhibit of the Shurly-Dietrich Co., whose Maple Leaf Saw Works at Galt is the largest in the British Empire, occupies the whole side of one of the alleyways connecting the Industrial and Process Buildings, and the exhibit being placed entirely on a specially constructed, prominent stand along the wall, with a wide open space separated from the alleyway only by the iron pipe railing, gives a roomy and airy appearance which is absent from most of the other displays in the various buildings at the exhibition.

The permanent stand which is used year after year by the company is divided into three sections, one large display division in the centre, with two smaller sections at the ends. The arrangement of the saws on each of these large display boards is most artistic, the attention of visitors and passers-by being immediately focused upon a large circular saw seven feet anl four inches in diameter, located in the middle of the centre section. Around this large saw are groups of saws of every size and for every use imaginable, from the small circular saw one-inch in diameter, and the fine $\frac{1}{8}$-inch band saws used by mechanics in scroll work, etc., to the large 18-inch wide band saws, used in saw mills, from 50 to 60 feet in length. Ranged in the display are cross-cut saws, buck saws, ice saws, carpenter's saws, panel, rip and hand, compass saws, key hole saws, butcher saws, hack saws, pruning saws, and many other types, as well as samples of trowels made by the company. The exhibit this year is a larger and more representative display of saws than previously shown, the entire display being devoted to the one line.

To hardware merchants and carpenters who visited the display, the No. 1900 Maple Leaf hand saw was one of the most attractive features which interested them. Like other products of the Shurly-Dietrich plant, this saw is made from the finest grade of razor steel, tempered by the secret process which gives the blade a remarkably keen cutting edge and even temper throughout. The saw is perfectly ground, having a true tapered back and being fitted with a genuine apple wood handle.

Another saw of interest to hardware merchants is the Maple Leaf Racer cross-cut saw which continues to be a leader in its class, being fast cutting and economical in its operation. It is used largely by farmers, and lumbermen having staffs of men at work in the woods. By its special construction with thin back and slanting gullets, the sawdust is discharged perfectly, and every tooth of the saw is always cutting, this accounting for its special fast cutting qualities. The Improved Racer is also tempered by the Shurly-Dietrich secret process and is likewise made from the special razor steel used by the company in all its "Maple Leaf" products.

The "Maple Leaf" Saw Works was first established in Galt in 1874, the founders having learned the art of sawmaking in the works of the Flint Saw Works, at Rochester, N.Y. One of the first products was the lance-tooth saw, and the favor which this style of cross-cut saw found was the means of building up a large trade for the new factory, not only in Canada, but for export to the Western States, where "Maple Leaf" saws are handled in large quantities, as a result of the demand created by satisfied users of lance-tooth Maple Leaf cross-cut saws.

The "Improved Racer" cross-cut saw, their present leader, is the result of a third of a century's development of the company's product.

In 1902, after fire destroyed the company's plant, it was rebuilt on a larger scale and much new machinery installed. At the present time a large new warehouse is being constructed.

At the Toronto Exhibition, George E. Boomer, sales manager, and P. G. Dietrich, treasurer, were in charge, while Mr. J. C. Dietrich, president of the company, also spent some time at the display.

CANADIAN NATIONAL EXHIBITION.—Moffat Stove Co.'s Large Display of Stoves, Ranges and Heaters.

MOFFAT'S NEW LINES.

Confining their attention to the manufacture of stoves and ranges it is easy to understand how the Moffatt Stove Company, Weston, are able to bring forward, year after year, such practical improvements in the construction of gas and coal ranges. This year was no exception to the rule and their well-known booth in the Stove Building contained several innovations which attracted the attention of visiting hardwaremen.

Greatest interest was probably manifested in the large line of gas ranges displayed, the new No. 16-56 Canada gas range being the centre of attraction at this end of the display. Its tasty design, coupled with its compactness and completeness, commanded attention, and on inspection the glass oven doors, the tile back, the visible oven burners and thermometers won the favor of those who are quick to grasp selling qualities in cooking apparatus. In this range there is a lower oven for boiling vegetables, four holes for cooking, over which is a tile back and shelf, while alongside is a broiling oven, baking oven and warming oven set over each other. The No. 16-50 Canada National gas range, with coal or wood fire-box attachment, introduced a year ago and sold in large numbers last winter, also attracted attention as did the Nelson gas range with double oven for natural or artificial gas. Another new product this year is a new circulating water heater for attaching to range boilers. In this heater a three-quarter inch copper coil is bent in such a manner that the flame from the gas burner radiates the heater much quicker and more economical than a straight coil.

In steel ranges the Nelson B was featured this year on account of its remarkably low price and good value and its serviceability as a competitive line to mail-order house ranges. Of substantial weight and attractive design, interchangeable grates, Scotch brick lined, drop oven door, nickel trimmed, high warming oven and reservoir attachment and made in 18 and 20 inch ovens, it contains features which make it ideal as a competitive range to be used by hardwaremen desiring to combat catalogue house competition.

The Nelson A, a companion range more reasonable in price, was available only in smaller sizes up to this year but is now made with a 20 inch oven.

The Canada B steel range is the Moffat Company's real leader, however, its beautiful design and silver-like finish making it attractive to buyers who are looking for quality rather than cheapness. Its three years of success on the market is proof of its qualities as a high grade and easy selling range. In cast ranges the Classic and Welcome were again featured in the display.

A decidedly new baseburner line brought out this year by the Moffat Company is the new "Magic," a moderate priced baseburner containing all the features of the high priced lines. It is constructed on the double heating principle and is made in two sizes with twelve and fourteen inch firepots. An attractive feature is the easy manner in which the firepot can be taken out, it being unnecessary to remove a single bolt. The feeder can be removed with equal simplicity. The nickel work is all loose and of semi-plain design. The "King" baseburner, one of the company's established lines, was also displayed.

A new line of cheap oaks, which it will pay any dealer to investigate, is called the "Derby," has also been added to the Moffat products, they being made in eleven, thirteen, fifteen and seventeen inch sizes.

It is safe to say that no hardwareman who visited the exhibition failed to visit and inspect the Moffat Company's exhibit, but as many retailers were unable to visit Toronto at this time the company offer to send catalogues illustrating any of their products to any dealer requesting same.

CANADIAN NATIONAL EXHIBITION.—Supreme Heating Co.'s Display of Fuel Saving Steel Ranges.

SUPREME STEEL RANGES.

This was the second year's exhibit of The Supreme Heating Co., Welland, and their display in the Stove Building was one of the tastiest at the exhibition, their booth being decorated in green and white and surmounted by a canopy. The goods were so arranged that they were shown to their best advantage, and the company received many favorable comments from their competitors, as well as from dealers and consumers. The "Supreme" principles of construction are claimed to be the most up-to-date employed by any maker on the American continent.

In the company's exhibit was shown a new "Supreme" cast range with elevated warming closet, the workmanship, detail and design of which are beyond criticism. The great feature of this range is the patented device known as the secondary combustion tube, which is a great fuel saver. The company claim that with their "Supreme" ranges they can cut the fuel bill in two, and save 50 per cent. of the cost of either coal or wood. By this secondary combustion tube the unconsumed gasses are ignited and carried down under the oven, up the back of the oven, and then across the top of it to the smokepipe, making a complete circulation. The "Supreme" range is made in various styles, every part being made of superior materials. Every stove is hand-riveted. The bodies are of 20-gauge Wellsville polished steel, and the ovens of one-piece 16-gauge Bessemer steel. The reservoir holds nine gallons of water, and this water can be brought to boiling point, say the company, in less time and with less fuel than any other range. The water heater is convenient, durable and effective; the waterback can be taken out or installed inside a minute, and its use removes one of the leading expense items in the maintenance of the ordinary range. The graduated scale obviates the use of a pipe damper, as it is a perfect draft regulator. Every "Supreme" range is fitted with a thermometer, and the enlayed pouch-feed door can be used for broiling, toasting or adding fuel to the fire.

The "Supreme Oak Heater" is a strictly high grade base burner. As with the "Supreme" ranges every care has been given to its manufacture, only the best materials are used, and it has been thoroughly tested. Its ornamentation is pleasant to the eye, and it is built in strict harmony along artistic lines.

The "Supreme" gas stove line is just coming through the company's factory. It is made to consume both natural and artificial gas, and lays claim to being equal to any American make. In construction the Supreme Heating Co. have adopted every new design and contrivance known.

CANADIAN NATIONAL EXHIBITION.—Percival Plow & Stove Co.'s Exhibit.

COLONIAL STOVES AND RANGES.

One of the most noticeable displays in the Stove Building was the "Colonial Combination" coal and gas range, shown by The Percival Plow & Stove Co., Merrickville, Ont. Both coal and gas may be used separately or at the same time in this stove. This range takes up very little more room than the ordinary coal range, and is fitted with removable nickel trimmings, large 20-inch oven for coal, and both baking and broiling ovens for gas, besides having three cooking burners and a small simmering burner. It is finding ready sale in the large cities where space in the kitchen is usually limited.

Another line shown by this enterprising firm was a very pretty steel range which they have just added to their "Colonial" family and known as the "Colonial Princess." This stove has removable nickel trimmings, key-plate top, cast iron fire-box trimmings, 20"x22" oven and several other new features—loose oven bottom that can be replaced at any time without dismantling the stove; an adjustable flue-strip that is convenient in governing the draft for poor chimneys; and a simple arrangement by which the front keyplate can be lifted and locked up by the use of the ordinary lifter, no matter whether the range has a high closet or not. It also has a large copper (encased) reservoir, and screw draft dampers. The "Colonial Princess" should be a winner among the steel ranges now being sold.

A third line that was of particular interest to many was the "Imperial Base-burning Oak." This stove is a combination of an "Oak" and a base burner, having all the advantages of the former besides having a base flue which carries the heat around the bottom of the stove, assuring a warm floor, and giving the operator perfect control of the fire, either with hard or soft coal, coke or wood. The stove also has a double body, and a hot air pipe can be connected to carry the heat to any particular room desired. It is fitted with revolving and shaking grate, has a gas-ring where the air can be taken in and consumed with the coal gas, also a cast lining protecting the steel body, and is a powerful heater at a reasonable price.

The "Colonial Prize" made in either eight or nine-inch tops and in 18 or 20-inch ovens, was also much admired for its beautiful design and convenient features, which were appreciated by both customers and visiting stove dealers.

Although the company did not exhibit its plow line the firm still claim to be the manufacturers of the best plows in earth and invite correspondence from hardwaremen who are interested in that line of goods.

CANADIAN NATIONAL EXHIBITION.—Hall-Zryd Co.'s "Pilot" Line of Stoves, Ranges and Furnaces.

PILOT STOVES AND RANGES.

The newest and latest product of The Hall, Zryd Foundry Co., Grimsby, Ont., is the "Dreadnaught Pilot" cast range, "the only 'Dreadnaught' built in Canada," and this stove was made the central feature of the company's exhibit in the Stove Building. The display was attractively set off, the walls being being panelled in green burlap with white wood borders, and green covering on the floor. The management of the company state they are emphasizing the stove business, and this can be understood when one considers the amount of capital being expended on the company's new plant. Messrs. Hall and Zryd prsonally looked after the exhibit, and they were assisted by their representatives in Eastern and Western Ontario, Messrs. Norton and Cain.

The "Pilot Line" is the title given this company's products. The features of the "Dreadnaught Pilot" cast range are a square steel oven; duplex double-shaker draw-out grate; cast iron linings: large roomy ash-pit; large pouch feed door; swing gate door; powerful water-front.

The "Pilot Pillar" in six styles and six sizes; the "Pilot Peary," in six styles and two sizes; and the "Pilot Western" in six styles and two sizes, are also prominent lines that were shown, their especial point being commented on.

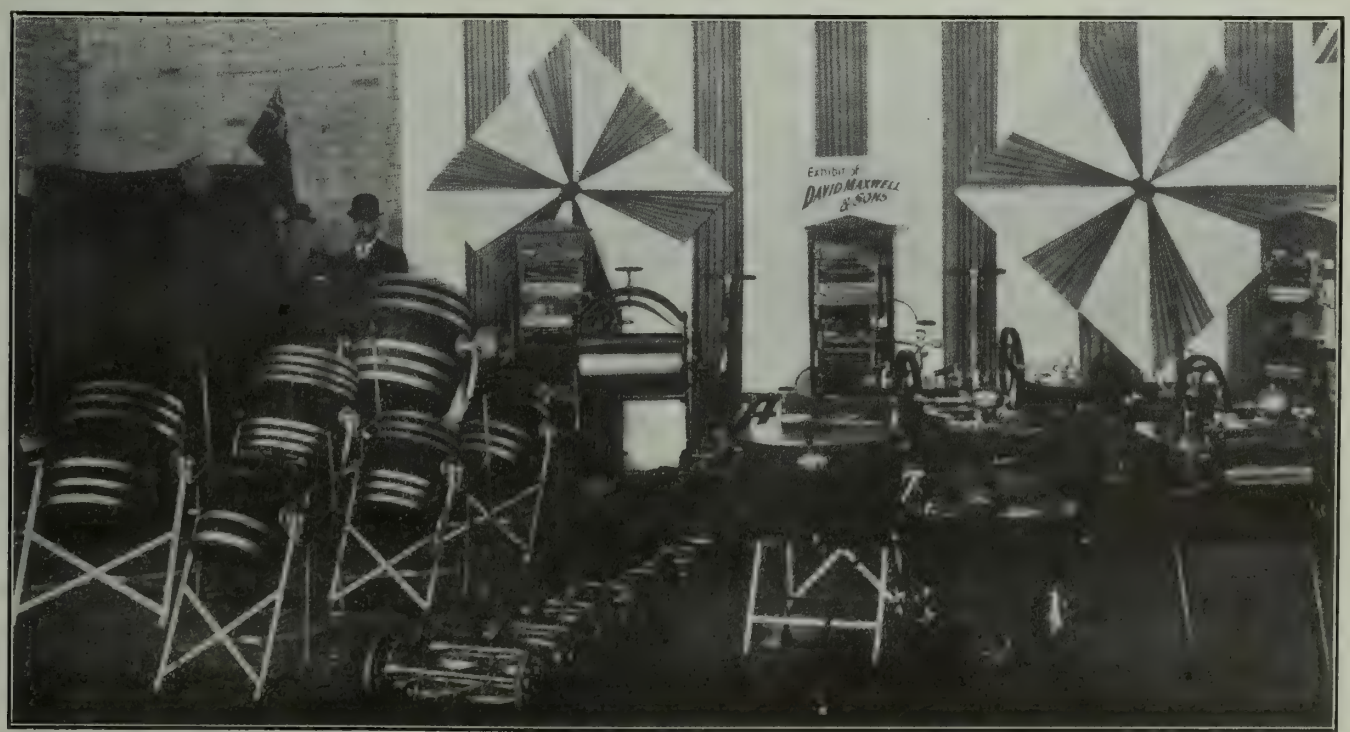
The "Pilot Brilliant" and "Pilot Oak" heating stoves, each in four styles and four sizes, proved attractive to a great many hardwaremen and customers who visited the exhibit. Each of these stoves has a centre dump shaker grate, and they are both high grade heaters.

The "Pilot Success" furnace is working itself well to the front among hot air heating goods. It has proved itself successful everywhere. It is of Canadian design and is specially adapted for Canadian winters. In construction the radiator is divided by a baffle, giving the "Success" twice the fire travel of any other furnace. The combustion chamber is large and roomy and made extra strong and durable. There is a large air space between the inner side of the radiator and the dome. The "Success" has a great many other special features principally devoted to economy in the use of fuel. It is guaranteed to save 25 per cent. of the cost of fuel.

The "Superior" furnace is made in one size only, and is adapted specially for small dwellings. It has an 18-inch firepot and is 42 inches high.

CANADIAN NATIONAL EXHIBITION. —Canadian Heating and Ventilating Co.'s Display.

NEW EMPIRE STEEL RANGE.



A new feature in the exhibit of the Canadian Heating and Ventilating Company, Owen Sound, this year, was the new "Empire" steel range, made in a design very attractive because of its simplicity and plainness. It is made in four sizes and is of the same draft construction as the "Empire Queen."

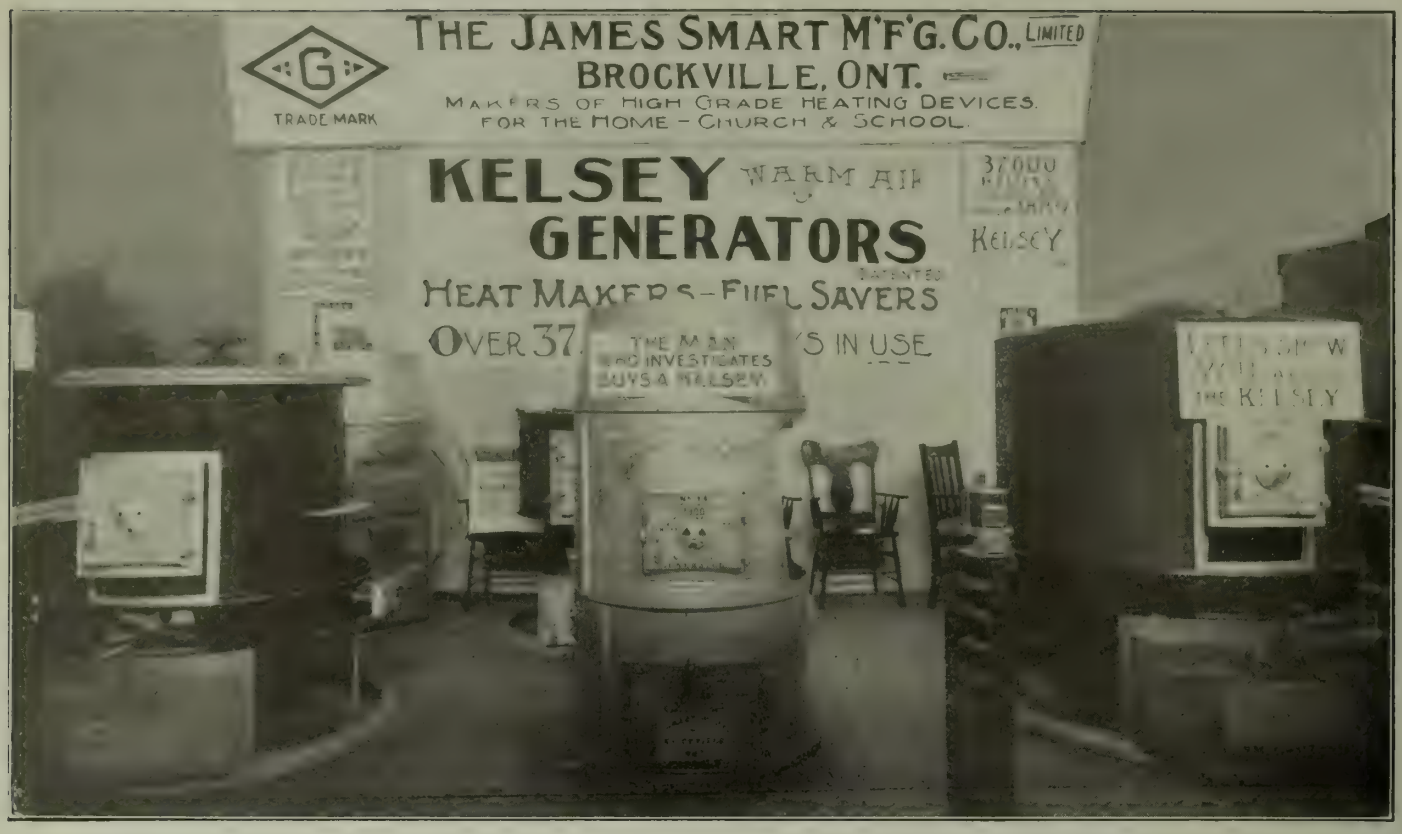
The "Empire Queen" range and the "Empire Chinook" steel range, so favorably known to the trade, were also prominently shown in the display. It is unnecessary to repeat here the good qualities of these widely-known ranges. The "Joy Malleable," too, needs little discription, as in Western Canada, where its chief market is, it has an established reputation as one of the most high class ranges on the market.

The "Empire Oak," made in four sizes, has a new feature in that it is fitted with duplex grate, both dump and shake. It has a double mica door and removable magazine.

An entirely new line is the "Empire Quebec" heater, made in four sizes of attractive design with a nickel band around the top and a nickeled ash door.

In the furnace line the "Empire King" furnace was again shown along with a most complete line of registers, comprising side wall and floor finished in black, oxodized and nickel in an attractive Moorish design.

CANADIAN NATIONAL EXHIBITION. —Display of David Maxwell & Sons' Products.



CHAMPION HIGH SPEED WASHER.

Among the many exhibits of labor saving devices for women was the display made by David Maxwell & Sons, St. Marys, under the grand stand.

The centre of interest was undoubtedly the "Champion" high speed washer, operated by hand, but especially easy running on account of the gear arrangement of the heavy balance wheel, one stroke of the hand lever causing the wheel to revolve four times, and this momentum relieving the operator of the weight of the clothing in the tub.

The "Favorite" churn, another of the Maxwell Company's leaders, was also a centre of attraction, it being shown in both double hand lever and foot and hand lever, the latter being a feature exclusive to the "Favorite." Lawn mowers, wheel barrows and bag trucks were other Maxwell products shown.

John Maxwell and J. W. Gallagher were in charge of the display.

CANADIAN NATIONAL EXHIBITION.—Display of Kelsey Warm Air Generators.

KELSEY WARM AIR GENERATORS.

One of the most interesting exhibits in the stove building was that of The James Smart Mfg. Co., Brockville, Ont., sole Canadian makers of the Kelsey Warm Air Generator, who devoted all their space to this one line. The Kelsey Generator is unlike any other warming device. It is really a hot water boiler converted into a warm air generator. Its method of warming the air in separate currents is claimed to be the best method, as the warm air is always controlled and can be sent in any desired direction, besides warming all the rooms in the house all the time. The fire-pot is an unique and important feature of the Kelsey construction. It is built on the principles of the tubular boiler, with long, hollow corrugated sections. The grouping of these 8 to 16 sections, side by side forms the fire-pot and combustion chamber. Each section is a separate warm air generator which expands and contracts independently.

ALUMINUM KITCHEN WARE.

Located near the stove displays in the stove section of the Industrial Building was another display which interested every hardwareman. No matter what make of stoves he sells, every dealer is interested in kitchen utensils, and the large variety of aluminum household articles on display in the booth of the Northern Aluminum Co., Toronto, was always surrounded by a crowd of interested dealers

The Northern Aluminum Co. is the only company in Canada that manufactures aluminum metal. They have invested several million dollars in a plant at Shawinigan Falls, Quebec, where advantage is being taken of the water power to reduce aluminum from its ore. Here is made ingot, in all forms, as well as wire and cable for transmission lines. The ingot is sold to steel companies for use in making steel, and to casting companies for making all kinds of aluminum castings. Many power companies

CANADIAN NATIONAL EXHIBITION. —Northern Aluminum Co.'s Display of "Wear-ever" Cooking Utensils.

have used aluminum cable for transmission lines, chief of which is the Hydro-Electric Power Co. Aluminum sheet is used extensively by automobile companies for bodies and hoods. Sugar refineries and pulp mills have also learned to use aluminum to good advantage.

In the past year ten thousand families throughout Canada have started to use "Wear-Ever." When once used, a customer is made for "Wear-Ever," and the demand is ever increasing. Heretofore aluminum ware has remained on the shelves in stores simply because people really did not know its worth, while the price and poor finish of the utensils destroyed any interest that prospective purchasers may have had in the ware. During the past year, through a unique method of advertising "Wear-Ever" has secured ten thousand enthusiastic users in Canada and hardwaremen are beginning to realize that their stock is not complete without a full line of "Wear-Ever" utensils, and many of them are taking advantage of these goods to make fine window displays.

"Wear-Ever" hotel ware is made of 5-32 of an inch metal, and is practically indestructible. The trays have been placed in almost every first class hotel throughout the Dominion. This is the only tray that does not buckle or warp, nor soil the linen in any way.

The Northern Aluminum Co. has a warehouse at 106 Front Street East, Toronto, and is in a position to fill all orders promptly. A postal addressed to their sales offices, 1,503-4 Traders Bank Building, Toronto will bring a catalogue.

RAMSAY'S PAINTS.

A. Ramsay & Sons, paint manufacturers, Montreal, had one of the most artistic displays in the Industrial Building, choosing to demonstrate their paints as actually used on buildings rather than showing the cans of paint themselves. The four model houses set on a lawn, cut up with imitation cement walks and backed by painted scenery, were certainly an attraction for both big and little folks. The model houses are supplied to hardware merchants for window disp'ay purposes,

CIRCLE WATERPAN FURNACES.

Having originated a new idea in furnaces construction this season, the James Stewart Manufacturing Company, Woodstock, secured a space in the Stove Building at the Toronto Exhibition in order to demonstrate the value of their idea to dealers and furnace users and so great has been the interest displayed by the hundreds of visitors at their booth that they are very much gratified with the results of their experiment

The "Good Cheer" furnace with the circle waterpan was, of course, the central feature of their display, one method adopted to show the utility and serviceability of the circle waterpan being the display of a number of two to five quart waterpans taken from other standard

CANADIAN NATIONAL EXHIBITION.—Model Houses shown by A. Ramsay & Son.

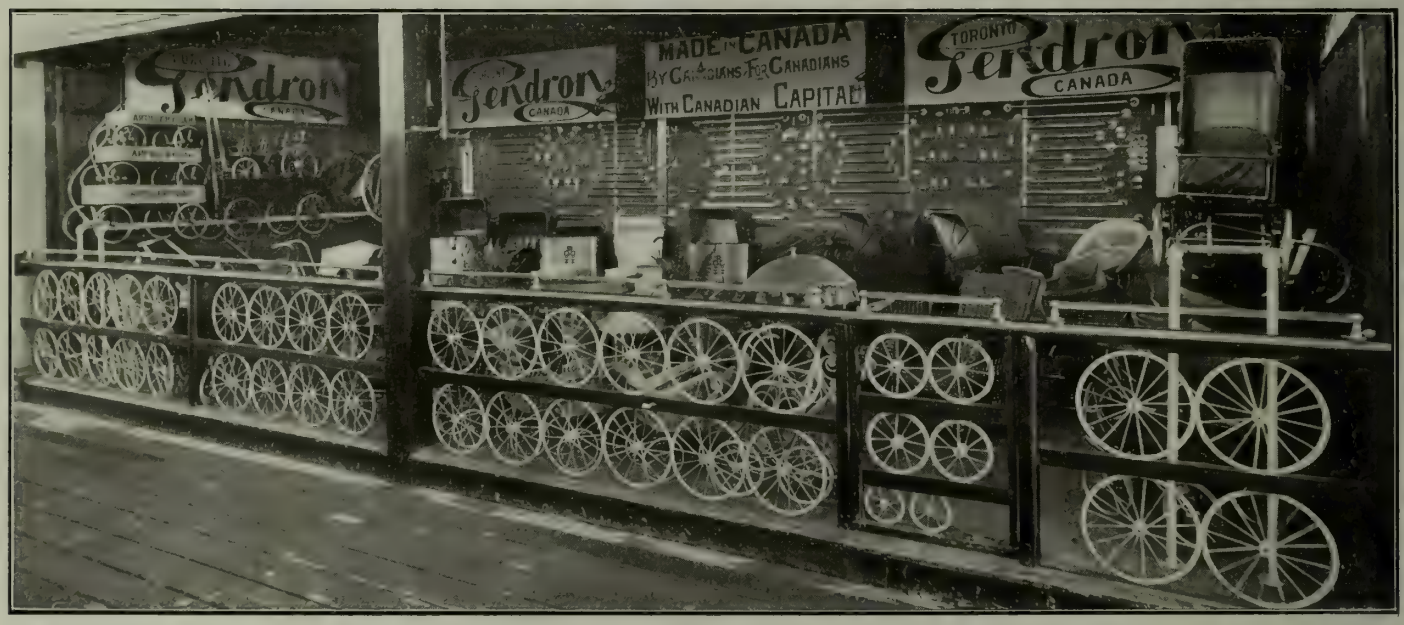
furnaces and showing them alongside the circular pan of the "Good Cheer" with its four to six gallons capacity. And to clinch the matter they picture an ordinary furnace and show how a furnace with an ordinary waterpan supplies humidified air to one flue only, while the "Good Cheer," with its circular pan, supplies moisture to every flue through which warm air is taken from the furnace. To further demonstrate their point they tell of experiments showing how flowers will grow in furnace heated rooms supplied with moistened or humidified air, while they die in rooms supplied by flues delivering unmoistened air. And they rightly argue that what is bad for plant life is bad for the lungs, etc., of the human body. The James Stewart Company invite hardwaremen who were unable to visit their display to send for circulars describing this latest idea in furnace construction.

Included in the display, of course, was the "Good Cheer" steel plate range in which the usual back grate rest is dispensed with, the grates being supported from the ends. The utility of this is proven by the fact that in the West where soft coal is used it is found necessary to replace the linings nearly every year in ranges of other construction. The makers of the "Good Cheer," however, have yet to ship their first fire box to the West because of the warping or burning out of these parts. The "Garnet," and the rest of the "Good Cheer" family of steel and cast ranges, baseburners, oaks, hot blasts, etc., were also on display.

CANADIAN NATIONAL EXHIBITION.—James Stewart Mfg. Co.'s Display.

CANADIAN NATIONAL EXHIBITION.—Onward Mfg. Co.'s Display of Vacuum Cleaners.

AUTOMATIC VACUUM CLEANERS.



The Onward Manufacturing Co., Berlin, Ontario, had a display of Vacuum Cleaners under the Grand Stand.

The "Automatic" needs little introduction to the Canadian hardware trade, fifteen hundred of them having been sold last spring, while hundreds of orders had to be refused because of inability to supply the demand fast enough. An enlarged plant, however, now makes it possible to turn out a much larger number and orders can be promptly filled.

The "Automatic" hand power is different from other machines in that it has a blower as well as a suction attachment. In both of these operations the machine is very powerful and the air displacement is claimed to excel any other machine by at least one third

The "Automatic" electric machine is a powerful machine fitted with or without an enclosing jacket. Complete it weighs only 40 pounds and is easily removed from one location to another.

Included in the display was a table containing a variety of the popular "sliding furniture shoes" introduced into Canada a year or two ago by the Onward Company. Made with glass and metal bases these "shoes" are fast taking the place of casters on beds and heavy articles of furniture and hardware dealers are finding them a very salable line.

CANADIAN NATIONAL EXHIBITION.—Gendron Mfg. Co.'s Artistic Display.

CHILDREN'S VEHICLES.

Probably the finest display of children's vehicles and reed furniture at the exhibition, was that of the Gendron Mfg. Co., Ltd., Toronto, in the Industrial Building. The accompanying illustration will give a good idea of the class of goods and the taste used in displaying this company's manufactures. The background of the exhibit was trimmed with a complete line of bathroom fittings, a new line made by the Gendron Mfg. Co.,

At the end was a raised railing, containing a boy's new express wagon, called the "Artillery Car." The body of this wagon was painted grey with a black gear and a curved iron handle, which is to be used for coasting.

For 1911 a complete line of collapsible go-carts was exhibited, including all the most up-to-date styles and motions. It is wonderful to note the improvement on this line of vehicles. Collapsible go-carts called "The Tourist" were in this arrangement, the Gendron Mfg. Co. being selling agents for Canada.

A noticeable and new idea was in the baby sleigh department. This year hood tops are being placed on some sleighs, and they look good and comfortable, giving the baby all the protection necessary. The fence or railing was filled in with the Gendron patent wire wheels, with glass bars for a trimming at top.

Directly inside of railing was a display of dolls' folding go-carts made after the principle of baby collapsible go-carts.

The centre of the exhibit was furnished with a new line of reed furniture.

STOCK FOOD AND WASHING MACHINES.

The International Stock Food Co., Toronto, had a very attractive display of their preparations for all kinds of stock in the Manufacturers' Annex, under the Grand Stand.

This company manufacture a full line of veterinary remedies, all of which are sold on a positive cash guarantee to give the results claimed or cost the user nothing.

Their goods are being handled by over one hundred thousand dealers in Canada and United States and in the twenty years the company has been in existence it has built up the largest business of the kind in the world. This speaks well for the company and shows that they are progressive and up-to-date in their methods.

While they have agents in most of the towns in Canada there are some points open and any dealer who is looking for a good line that will add materially to his yearly profits should write the International Stock Food Co. for prices and terms.

This might promise an opening for hardwaremen in the west, and in fact in all country sections where stock is raised or kept to any extent.

The company also manufacture the famous Dan Patch washer, which is giving good satisfaction. The machine is guaranteed for 10 years and is claimed to be without doubt the easiest running washing machine on the market. Hardwaremen are invited to write for prices. The claim is made for this washer that it saves time, money and labor ; that it is the fastest and easiest washer made, and that it is a great clothing saver, never tearing the most delicate fabrics or pulling off buttons. It has a detachable wringer attachment. The Dan Patch is constructed on different lines from any other washing machine. The mechanism is concealed beneath the bottom, so there is no chance of it catching the clothes in the wash or the clothes of the operator. It is built by expert workmen, of the best material and on scientific principles.

CANADIAN NATIONAL EXHIBITION.—Big Display of International Stock Food Co.'s Products.

CANADIAN NATIONAL EXHIBITION.—Dominion Roofing and Supply Company's Display.

MALTHITE ROOFING.

A fine exhibit of "Malthite" roofing was made in Machinery Hall by the Dominion Roofing and Supply Co., Toronto. This company are now manufacturing in Canada four leading lines of their roofing malthite—sand-coated, gravel-coated, mica-coated and asphalt malthite. Two of these lines which should appeal strongly to the hardware trade are the asphalt and sand-coated malthite. These materials are sold to the hardwareman at a low cost, and give him every opportunity to compete against shingles and metals.

The two-ply asphalt malthite is naturally the line most in demand, because it is used for such a vast variety of purposes. It is principally called for when old buildings are to be recovered, and is also much used on outhouses, sheds, barns, stables and on root and crop storehouses on farms.

The quality of malthite roofing is classed second to none. The base of the material is a heavy grade of wool felt which is densely saturated, waterproofed and then coated with a genuine natural asphalt—the highest quality it is possible to secure and one not made under a secret or artificial process.

"Malthite" roofings are guaranteed direct to the consumer for five, seven and ten years. The mica-coated roofing exhibit attracted great attention by its brilliant effect. It is specially adapted for dwelling houses.

The company's booth was decorated with blue and white bunting, while at the back a large sign brought attention to the different brands of roofing made by the company. Samples of crude asbestos taken from the company's mines in Quebec together with some asbestos fibre gave suggestions as to base of malthite and process of manufacture.

Model roofs showing the method of application of asphalt malthite were suggestive. This roofing allows of being painted any color. Suggestions, too, were offered regarding the application and forms of use of the other grades of "Malthite."

SPOONER'S COPPERINE.

Located on a prominent corner in the Industrial Building, Alonzo W. Spooner, Port Hope, had an exhibit of his famous babbit metal known as "Copperine," and Mr. Spooner spent a busy two weeks, and shaking hands with the numerous friends who stopped to renew friendship with him, and explaining the merits of his metal to those callers who have not yet learned to use "the best babbit metal on earth," as Mr. Spooner puts it. And certainly "Copperine" has a host of friends who are almost as enthusiastic about it as the jolly manufacturer himself.

One Flag, one King, one Empire, and one "Copperine," is Mr. Spooner's motto: "Copperine," he says, "is Mr. Babbit's metal plus a college education. It's the real thing—Canadian made and stumps the world. When any man offers you something better, remember he is not under oath. Copperine will do all any other metal can do, besides holding a larger reserve."

The hardwaremen who exclusively sell this metal invariably have the best metal trade, while those who grab for profits on cheap stuff lose by it. Buyers who get satisfactory goods will return for more goods. "Copperine" needs no introduction to Canadian engineers and manufacturers, mills, mines and saw mills. It is thoroughly well advertised and both goods and prices are right. "What more can the hardware trade desire?" asks Mr. Spooner, who claims to have been the first to first to start the hardware stores selling babbit metal in Canada.

Mr. Spooner has no travelers out selling to the customers of hardware merchants. When he appoints an agent he gives him exclusive territory and does not try to divide the business with him. "Once used, 'Copperine' will always be used."

STREET PARADE DISPLAY.

Kemptville, Sept. 12.—A paint exhibit shown by the hardware firm of Mundle & Percival, in a recent demonstration held here, created much attention. A small harmonium was concealed in the wagon, and a colored "chorus" composed of the staff sang popular songs as the procession moved along. One of the most popular songs went as follows:

We are the people,
Yes, we are,
Mundle, Percival
Rah, Rah, Rah.

With the flags of the wagon floating in the air, and the songs ringing out, the whole turnout was exceedingly popular.

A PRACTICAL ALTRUIST.

Nathan Strauss, when asked what had contributed to his remarkable career, said: "I always looked out for the man at the other end of the bargain." He said that if he got a bad bargain himself he could stand it, even if his losses were heavy, but he could never afford to have the man who dealt with him get a bad bargain.

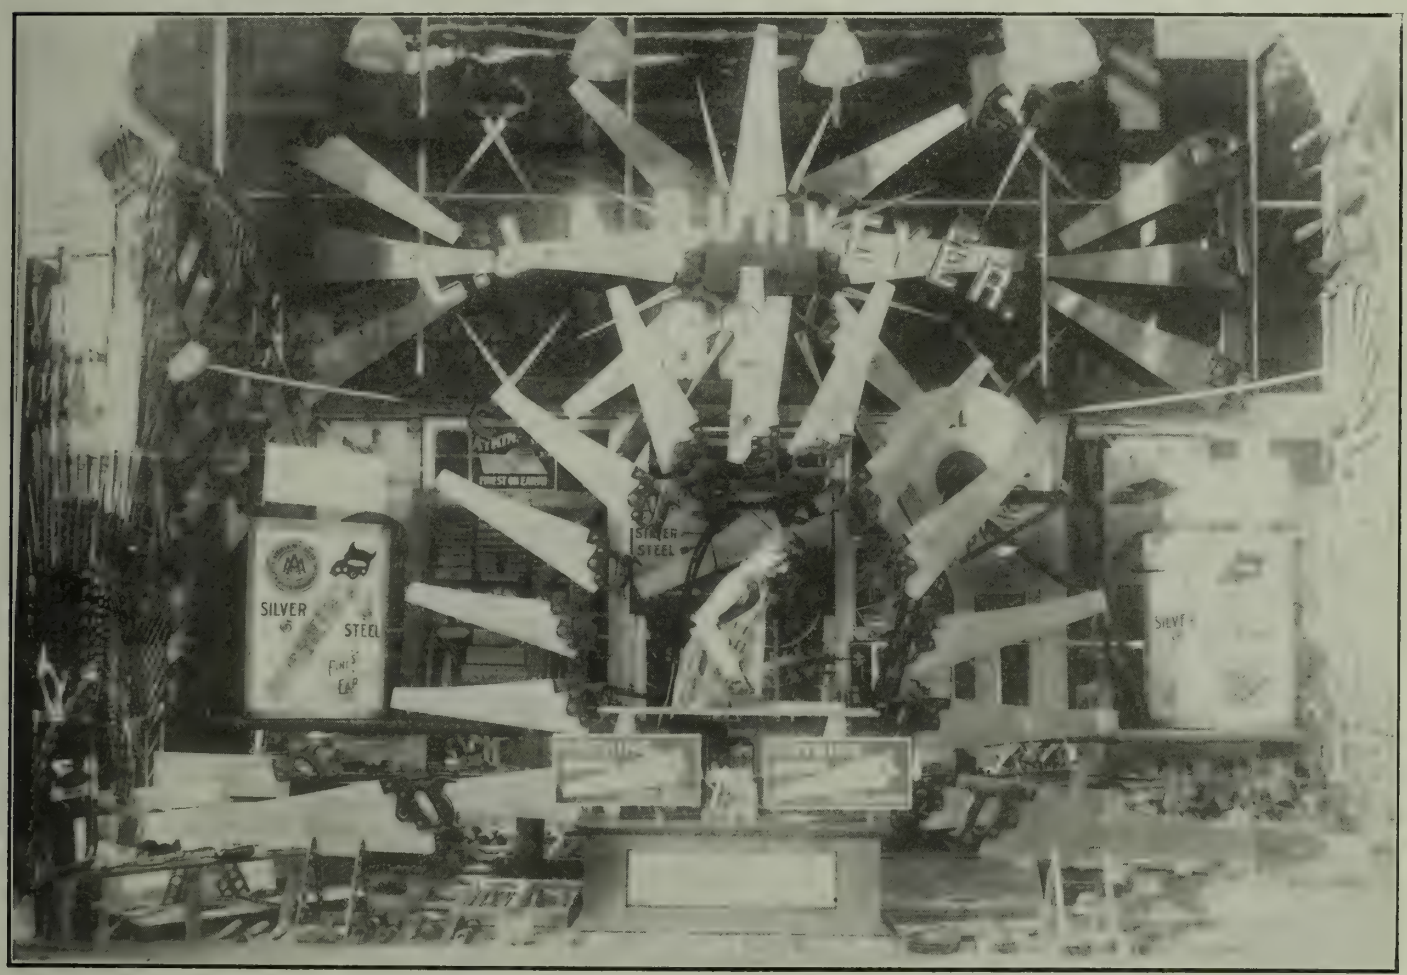
CANADIAN NATIONAL EXHIBITION—Alonzo W. Spooner's Display of "Copperine."

TO LIVE IN GLASS HOUSES?

Roger S. Pease, a glass manufacturer of Pittsburg, predicts that within ten years people in this country will be building glass houses. He pictures this future structure as excelling in sanitary appointments, beauty, and durability any type now known. It all sounds like a fairy tale, but an exchange remarks that it was not so many years ago that the description of a building constructed from cement would have seemed equally preposterous.

Display Made by Kemptville Hardware Firm in a Street Parade.

The Window Displays of a Hardware Merchant



A Window Display is a Great Business Bringer—By it a Demand Can be Created—Effective Windows Demonstate the Live Store — Spectacular Effects are Not Essential—What is Neccessary is the Design That Tells the Tale —The Neglect of General Utility Goods —The Value of the Wax Figure.

It is hard to understand why some merchants take so little heed of their windows. No better form of advertising can be had than a window display. At very little cost, unless a merchant goes in for elaborate spectacular effect, most artistic displays can be shown which not only brighten up store fronts but cause people to stop to admire the goods that the merchant is handling. A man who is carrying a good stock should take his window illuminated even though the store may be closed for actual business.

The Live Store.

A store window is an indication of the progressiveness that is actuating the merchant. A window which always looks effective, and shows that careful attention is being paid to it, demonstrates a merchant who is keenly alive to all trade possibilities, and who is on the lookout

latter may be much dearer in price. It is the same in the case of two windows, the one looking well cared for and the other looking just the reverse. Take the window in which there is absolutely no attempt at display. The glass is dusty and fly marked. Goods are thrown in carelessly as if they were junk and the whole appearance of the store looking as if the merchant was on his last legs. People are very impressionable. They are not inclined to probe very deeply, and although the merchant with the dirty window may be financially much sounder than the man with the bright window, and although he may carry behind his dusty counters a much more comprehensive stock and a better quality one too, no one believes it, and in the end he loses the trade that should be coming his way.

Mechanical Saw Window Display Shown in a Montreal Hardware Store.

a pride in showing them to the public even though this demonstration has no material effect upon his revenue. But it is a well-known fact that a window display is a great business bringer, and that when properly arranged, and shown in a systematic series, can create a demand. Many instances are given where merchants have absolutely educated their communities to buying a certain class of goods for which there had been no demand at all. In fact, so important is a window display that during the evening it is advisable for a merchant to have to secure all the business that he possibly can. People like to deal with such a live store. There is a feeling, rightly or wrongly, that this man cannot possibly have any old or inferior quality of goods in his store. With such a window he must positively have the best goods on the market. It is the same thing as in the case of an article that is covered with dust. Show a customer two stoves, one with the nickel parts dimmed, the other looking as bright as the proverbial new pin. It is easy to know which one would sell the quicker even though the

Displays Not Difficult.

It is not as though a window display was a very difficult matter to understand or necessitated a great amount of financial expense. Any man with a little ingenuity and some idea of arrangement can with his ordinary stock produce attractive window effects. We have heard some hardwaremen say, when spoken to regarding the windows that it is all very well for the bigger man to talk about window effect when they have plenty of money and plenty of help to produce a most spectacular effect. It is doubtful

if spectacular effect does bring any business. It advertises the store generally. People may say "So-and-So has a wonderful window, have a look at it while you are passing to-day." This does not bring in actual business although it advertises the store. But if a merchant takes the trouble to have an artistic display of sporting goods, bringing out, particularly, his line of guns, revolvers, or knives or whatever it may be, then comment is made that "So-and-So is showing a fine display of guns." This brings the sporting man, who probably wants a gun, down to his window. All that is wanted in a good window display is a little time and a little trouble and that is at the command of every merchant, irrespective of the number of clerks or of the trade that he is doing. As a man takes a pride in his personal appearance so a merchant should take pride in the appearance of his store. It is the outward sign of progressiveness and of pride in one's stock. One hour spent in decorating a window will bring in more revenue than seven hours spent in standing behind a counter waiting for customers.

Merchants, too, now-a-days are greatly helped by the manufacturers. Cards, signs, window trim, small working models and all manner of things can be obtained by the merchant, especially so in the case of paints. But although the paint manufacturers are away ahead of other manufacturers in the matter of helping the merchants in their displays, still there are very few manufacturers now-a-days who do not get out aids to displays which merchants will find very useful.

Prettiness Not Everything.

In regard to the spectacular effect of a window it must not be forgotten that prettiness is not an essential feature of display. As one authority put it many merchants ignore their window opportunities because they think that the chief requirement of the successful window is to look pretty. It is not essential for a window to look pretty just for the sake of beauty alone. A window display is for the purpose of selling goods and if other points besides beauty or artistic display will sell more goods then give beauty the minor consideration. There are lines of goods that are so homely and commonplace that they are neglected as far as display goes. These are goods of use in household, kitchen, garden and farm. They cannot be made into handsome exhibits but they can be made into interesting exhibits which is of far more importance. It is well to give up more window space than is commonly done to general utility goods. People like to look at enamelware displays just the same as they look at elaborate displays, say of vacuum cleaners Then again many merchants seem to think that it is only the sporting display that can be made attractive. It is true a sporting display commands general attention but we are not all sportsmen, neither are we all thinking of buying a gun to-morrow. After all things that people are compelled to buy; things that are absolute necessities; should be easier to sell than those which are used infrequently.

As it has been pointed out the rent paid for a store is based to an extent upon the number of people who normally pass the door each day. That means the merchant is paying rent for the whole store which is in a measure based on the value of the windows as advertising space. If the window is neglected the merchants are throwing away rent money. Neglect the windows and the customers will neglect the store. Keep the windows filled with goods and live talking sign cards. Make the cards tell the things that people want to know about the goods and always make them absolutely truthful. An unsuccessful merchant once said. "I have tried everything to sell goods but telling the truth about them and now I am going to try that." He was never afterwards sorry for taking this step.

The Wax Figure.

Every now and then controversy arises over the question of spectacular displays and the suggestion is being put forward that hardwaremen should make more use of wax figures than they do. No doubt wax figures lend themselves to various displays such as vacuum cleaners, wringers, sewing machines and so on. As it has been pointed out by an expert in contending that wax figures are of great help to the hardwareman. Oftentimes a merchant will occasionally think up an idea on the novelty order in which a wax figure can be used to good advantage. He borrows one and proceeds with a clever novelty window. The results are easily shown, there is comment on all sides by the public, unusal attention is being attracted to his show window, and better sales should be effected during the run of this particular display. But the hardware man runs this until it is getting old, takes out the figure and returns it to the owner, then goes back to the same old window, containing a lot of goods with price tickets, the same old background, day in and day out, with practically nothing to serve as an eye catcher for his display saying "what I want is the business window," which he is not getting: "I don't want all this fancy work, it's out of place in a hardware store, anyway; its too much trouble and expense to fix," and thousands of other non-progressive remarks and arguments, merely saying these things without ever once allowing his brain to work and think. Therefore, if modern and constantly up-to-date properly trimmed window displays are maintained and prove themselves an indispensible medium for disposing of other classes of merchandise, why will it not do the same for the hardware merchant, if carried on in the same way? The newspaper can only say "we have the goods for sale"; a show window says "here they are" and in busy times, with competition as keen as a razor, something unusual must be placed before the public eye in order to to gain attention. With the use of wax figures in displays a man is many points ahead of his competitor. However care must be exercised in posing; harmonizing with the display and using them regularly." Of course, this contention is very well put, and no doubt figures will help in displays, but it does not affect the fact that a merchant with simply and solely the stock that he has in his store can produce windows that will not only reflect credit on the store, but bring in good business fully commensurate with the time and trouble that has been spent upon the display.

MECHANICAL SAW WINDOW.

A highly realistic mechanical figure representing a workman using an Atkins Silver Steel Saw, has been drawing crowds of interested Montreal people to the store of L. J. A. Surveyer. In fact policemen have had to control the crowds so that traffic could have way. With the figure in motion one can almost see the sawdust fly; while the design of the window, made up of an elaborate display of saws and other tools manufactured by E. C. Atkins & Co., Indianapolis, Ind., and Hamilton, Ont., and illuminated at night by Atkins' electrical signs, is remarkably effective in an advertising way, at the same time being educational as to what can be done with a good mechanical figure backed up by decorative skill. The window display was designed by Hector A. Bernier, of L. J. A. Surveyer, whose skilful efforts in this way have several times been illustrated in Hardware and Metal.

The Atkins Co. intend to exhibit the figure in one or two Montreal stores, and then to take it on a tour throughout Canada.

LONG MEMORY CAME HANDY.

Kincardine, Sept. 12.—W. J. Kilmer, who was in Kincardine recently after an absence of a dozen years, is now in the hardware business in Spokane. He has a good memory, and is a shrewd salesman.

One day a woman came into his Spokane store to buy a stove. She haggled about the price.

"You came from Ontario," said Mr. Kilmer.

"Yes."

"Well, if I tell you what particular part you came from, will you buy the stove?"

"Yes."

"You came from Grey Ox in Bruce County."

"How on earth did you know?" she asked. He told her his name, and she paid his price for the stove.

OPENINGS IN WEST.

The Industrial Department of the Canadian Pacific Railway announce that there are openings for hardware stores at Cowley, Alberta; Candahar, Sask., and Jansen, Sask.

Hardware Convention and Exhibition at Peterboro

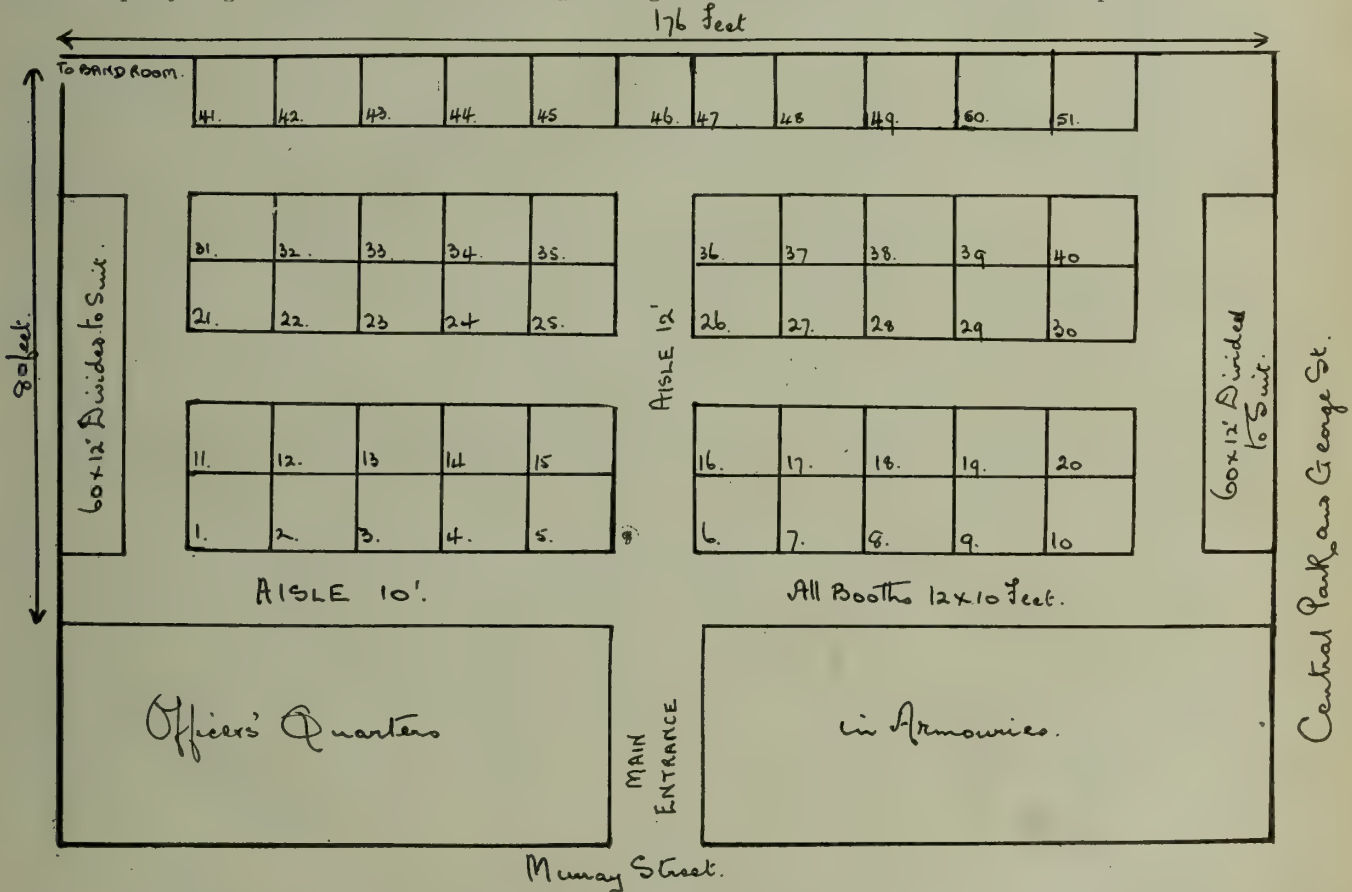
Arrangements Well Under way for Sixth Annual Convention of Ontario Retail Hardware and Stove Dealers Association—About Two-thirds of the Space in Large Armories Already Allotted to Exhibitors.

Plans for the big convention to be held by the Ontario Retail Hardware and Stove Dealers' Association at Peterboro, Feb. 21 to 24, 1911, are nearing completion and it is expected that a meeting of the executive committee will be held next month to complete the arrangements and deal with other business before the Association.

The fact that this is to be the first convention held east of Toronto, is exciting a great deal of interest amongst hardwaremen in Eastern Ontario, and it is expected that there will be a greatly increased attendance from eastern and northern Ontario, while the members from western Ontario will be on hand in equally large numbers as in previous years as Peterboro is only a short distance east of Toronto.

As in previous years the convention will cover four days. The present plan is to devote every afternoon from 1.30 to 4.30 to convention business, the exhibition hall being closed during these hours. In the mornings the convention committees will meet.

The exhibition will probably be open each morning from 9 to 12 and from 4.30 to 6 each afternoon. Besides this the exhibition will likely be open Tuesday and Wednesday evenings, the first night to hardwaremen only with a special program of friendship creating fun, and the second night, a band concert being p rovided and the general public admitted, while the retailers are in an educational "Question Box" session.



Certain hours will also be named each morning when Peterboro hardware manufacturers will be "at home" to visiting retailers.

On Thursday night exhibitors and retailers will fraternize again in a social event, which it is expected will excel in real enjoyment all previous gatherings.

The accompanying plan shows that the exhibition is to be on a much larger scale than attempted at previous conventions. The securing of the big armouries, 80x176 feet in size, made it possible to allow larger spaces to exhibitors, and booths at Peterboro will all have a frontage of twelve feet and a depth of ten feet, making 120 square feet, compared with 68 square feet at London, the prices charged being practically the same, and that exhibitors at previous conventions appreciate the opportunity of bringing their new goods before the retailers at the convention is shown by the advance booking so far made in response to circular letters sent out in August :

Booth No.
1 Metallic Roofing Co.,
2 Steel Trough and Machine Co.
3 Boeckh Brothers, Limited.
4 Cummer-Dowswell, Limited.
5 International Varnish Company.
6 Canada Paint Company.
7 S. F. Bowser Mfg. Co.
8 Dunlop Tire & Rubber Goods Co.
9-10 D. Maxwell & Sons.
11 Standard Paint Co.
14-15 Moffat Stove Co.
16 Gendron Mfg. Co.
20 Supreme Heating Co.
21 Pittsburg Perfect Fence Co.
22 Lewis Bros., Limited.
23 Clare Brothers, Limited.
24 Onward Mfg. Co.
25 Gillette Safety Razor Co.
26 Lufkin Rule Co.
27 McClary Mfg. Co.
30 D. Moore Co.
31 Brantford Roofing Co.
32 Tobin Arms Manufacturing Co.
35 Carborundum Co.
36 Goldie & McCullough.
40 Imperial Varnish Co.
41-2 Oneida Community.
43-4 Under option.
45 Northern Aluminum Co.
46 Brandram-Henderson, Limited.
47 James Robertson Co.
48 Rapid Tool Co.
51 F. W. Bird & Son.

The above shows over two-thirds of the booths already booked over five months in advance of the convention dates. The two large spaces at the end are being reserved for special exhibits to be made of "Made in Peterboro" hardware and "Philadelphia made hardware," plans being nearly completed for a composite display to be made by five Philadelphia firms, North Bros., Disston Saw Co., Enterprise Mfg. Co., Fayette R. Plumb Co., and the the Miller Lock Co., and for a similar display by Peterboro hardware manufacturers.

PUBLISHED EVERY SATURDAY.

WHERE MERCHANTS CAN LEARN.

In this issue of Hardware and Metal about a score of exhibits made by hardware, paint and stove manufacturers at the Toronto Exhibition are illustrated and described, the object being to enable hardware merchants throughout Canada, who were unable to attend the exhibition, to gather an idea of the new features and selling methods introduced at this year's big show.

The illustrations and descriptive matter will repay study as there are many progressive ideas shown in methods of displaying goods, as well as a review of the improvements made and new lines put on the market by manufacturers during the past year.

Attendance at the exhibition is, of course, the best way to gather ideas as there demonstrations can be seen first-hand, and display ideas can be compared in the mind's eye with like conditions in the retailer's store. Pointers can be picked up, too, by spending an hour or so watching the salesmen in the stove exhibits, listening to their talk to customers and taking note of how they show off the features of a range. The "mock sale" at the London convention of the Ontario Retail Hardware Association, was repeated scores of times during the Toronto Exhibition—minus the interested group of spectators in attendance at London.

Manufacturers intending to exhibit at the Peterboro convention of the Retail Hardware Association, can also learn a lesson from the experience of the past fortnight in Toronto. It was the demonstrations that caught the crowd. And at Peterboro demonstrations can be made to the men who control the sale of goods through retail channels. A manufacturer who "takes a space" at Peterboro and uses it merely as a place to shake hands with customers and pass out souvenirs is doing no kindness to the retailers, and little benefit to himself. If he does not go prepared to help his retail customers by giving them increased knowledge regarding how to demonstrate and sell his goods, he is losing an opportunity, which will likely be taken advantage of by competitors with more progressive ideas. Give the retailers more "selling pointers" and fewer souvenirs, and it will be better for both the manufacturer and his customer.

ANOTHER ADVANCE IN PAINT.

In consequence of the high figures ruling in linseed oil, paint manufacturers have either advanced the price of liquid paints, or are on the point of doing so. Those who have been watching the markets carefully have probably anticipated something of this sort, for it stood to reason that if quality was to be maintained makers of paints could not pay the price of linseed oil and yet charge old prices. As a matter of fact, considering the bullish tendency of all raw materials, the price of paint has been very carefully guarded, and only when there was no other course compatible with the preservation of the quality and the making of a just profit have manufacturers distributed trade by advancing prices. It is doubtful whether producers in other branches of trade would have been so slow to alter prices.

With the advance in the cost of paint, merchants must have no hesitation in raising their price to the consumer. The latter cannot complain. For years he has been paying far too little for his paints. Even now with the unusual marketing conditions he is only paying a fair price. The merchant who has confidence in his brands will meet the higher figures boldly, and when customer grumbles he must explain that this raising of price is a guarantee of quality, and therefore should be met willingly. The dealer who is afraid to advance his price is foolish and unbusinesslike.

This advance in paints bears out the advice that we have for some time been giving merchants. In our talks to dealers we warned them that the cost of paint would be raised, if linseed oil maintained its bullishness, and that the merchant who ordered his fall stock early would reap an advantage. Here we have visible proof of the value of that advice. The merchant who has ordered his fall stock can now feel pleased with himself.

The question will no doubt be asked, when is this advancing likely to stop. Is the present increase the last, or will merchants be up against another advance before they have thoroughly digested this one? There is this point to be remembered that so far as they can, makers will keep trade undisturbed from price changes, but after all it is simply a case of the cost of raw materials. If linseed oil becomes cheaper then the pressure will be removed from paint. So far the opinion seems to be that until the South American crop is harvested there will be no relief in the bullish tendency of flaxseed, as the shortage in the states will swallow up the Canadian harvest. Time alone can tell, but it is likely that the present advances, which will generally be a heavy one, will hold for some time.

SCARCITY OF CANADA PLATES.

A number of Toronto and Montreal jobbers handling Canada plates are annoyed at the delays they are experiencing in the import delivery of orders placed for these goods months ago. They state that hardwaremen in various sections of the country to whom they had sold these plates, promising delivery about September 1, are clamoring for their goods.

In reply the jobbers are explaining to their customers as best they can, suggesting that they order a few boxes from stock to keep them going pending the arrival of their import orders.

The jobbers state, too, that they have had considerable correspondence with manufacturers and supply houses in the Old Country regarding the delay in making delivery of these shipments, and only recently the latter replied that the volume of business has been so great and everybody wants delivery of Canada plates at the same time that it had been impossible to meet the demand.

In the meantime jobbers' stocks are getting low and the market is tightening up. Montreal has already advanced prices 15 per cent. and some prophets say Toronto will do likewise in a few days.

KEEP THE WINDOWS LIGHTED.

Now that the days are growing shorter the question of lighting the show windows again becomes an important question.

In a city of about 15,000 population, one evening recently, Hardware and Metal noticed that the windows of all the hardware stores were dark. At first thought we concluded that there must be something wrong with the incandescent circuit, but we were informed that it would be very unusual if the store fronts were illuminated.

The retailers of the city in question are leaving idle one of the best and

cheapest advertising mediums that is open to them. There, as everywhere else, many people pass down the streets in the evening and, if given an opportunity, the ladies would look for interesting offerings in the windows. They have more leisure then to do so than during the day.

In this connection we might mention the experience of a Toronto trimmer. As an experiment he put in a display Saturday, between five and six o'clock, of goods to be sold Monday morning at eight o'clock. The plan was so successful that he continued it for some time. The windows sold the goods without the aid of a single line of newspaper advertising.

WHERE CREDIT IS NECESSARY.

The most successful merchants who do a credit business have a distinct understanding with the customer at the beginning of the account. Either the bills are to be paid weekly, monthly or at a certain stipulated time, and if the accounts are not paid when the customer agrees to pay them, the line of credit is cut off.

When to stop extending credit to a customer is one of the most serious problems that the country merchant has to face. It is at once productive of more bad accounts and of the loss of more good accounts than any other item in the list of store management problems that the retailer has to contend with.

Credit is a necessary evil in merchandising. Some one merchant in a town may make a go of cash business, and some merchants cannot do it. There must be some credit business, and the man who gives credit must do so under a well established and thoroughly understood system or he will soon find his bills receivable eating up his profits and wearing a big hole in his reserve capital. Of course, there are extraordinary circumstances, such as crop failure, deaths, loss of work and things of that nature, where exceptions are made, but even then, great care should be exercised, in the extension of credit, and notes should be taken, bearing interest, for the merchant is as much entitled to interest on money that he may have tied up in merchandise sold on credit, as is the banker on money that he loans.

The only sure rule is to have a system, make a personal study of each customer and his ability to pay, be strict and prompt about collections, require notes on overdue accounts and close up those that appear hopeless. It is better to lose a customer and a small amount of money than to lose a large amount of money and the customer too.

SELLING ADVERTISED GOODS.

The handling of advertised goods has decided advantages, particularly for the hardwareman with a small business. One of the most important of these is the restricted selling price guaranteed by the manufacturer, which makes it impossible for competitors to under-sell.

Another point in favor of advertised goods, is their reliability. A manufacturer would be a fool to spend thousands of dollars in building up a demand for his product if the merchandise were inferior or not as the advertisements represented it to be, and he would very soon find out that such a thing would not pay.

Take a glance at the best known paint and hardware lines handled by the trade (they are best known because extensively advertised), and in every case they stand for quality and are the recognized standard by which all similar articles are judged. Try to call to mind one single article that is not included in this rule, and you will fail.

Besides the advantages of price maintenance and standard quality, advertised goods recommend themselves to purchasers and require less salesmanship, because the sale has already been half made in the mind of the purchaser.

NEWFOUNDLAND'S FISHERIES.

There is much satisfaction to not only Newfoundlanders, but to Canadians and Britons, as well, over the award at The Hague in the dispute concerning Newfoundland's fishing rights.

The decision rendered by The Hague tribunal is greatly to be commended, not because Newfoundland has been sustained on the most essential points, but because of its sane insistence upon that in which sovereignty consists.

The crown in Newfoundland has won on all questions involving sovereignty, and the rights of United States fishermen under the treaty of 1818 have been defined and confirmed.

In some ways the right of Newfoundland to regulate the fisheries was the most important point raised. This right was questioned because it might be exercised to infringe upon treaty rights established in 1818. But it has been amply confirmed to Newfoundland as inherent in her jurisdiction over the waters.

The United States also set up the extraordinary contention that territorial waters must follow the sinuosities of the shore. This has been a vexed question in international law since its science was first studied.

But the United States did not come into the court with clean hands, as it has always refused to admit the contention it wished to apply to Newfoundland in regard to its own harbors and bays. The United States failed to establish its case, so that the general result is that Newfoundland has not only had her jurisdiction confirmed, but has had it considerably extended territorially.

The decision is of stupendous importance to Canada, because it settles the sovereignty of Hudson's Bay, whose fisheries are valuable and which is not affected by any treaty with a foreign power. That sovereignty should be immediately and vigorously asserted.

This should be done before foreign fishermen have become accustomed to neglect its existence.

OLD GUNS IN WINDOW DISPLAYS.

Just at this season of the year, when arms and ammunition are coming into demand for the use of sportsmen, these lines will be featured in many hardware window displays. Very effective displays can be made by the introduction of antique and out of date weapons side by side with the modern, up-to-date lines the hardwareman is offering for sale.

There is no community that has not some relics of this sort, and the owners will usually be perfectly willing to loan them for the hardwareman's purpose. Weapons that have seen use in the American Civil War are plentiful, while old flint-locks, used in pioneer days, can usually be secured without much difficulty. If the weapon has an actual historic association—can be identified with the War of 1812, the American Civil War, or even the Canadian contingent to South Africa—this will add quite a bit to the interest or if it was used by one of the first settlers in that part of the country, this fact can be profitably brought out by means of a neat show card outlining the weapon's history. Indian tomahawks even are useful, as are stone arrow heads, as representing the chase in one of its most primitive forms.

The use of such old weapons in window displays serves a double purpose. The first aim is to attract attention, and this can be done by a relic of some sort probably better than by anything else into which motion and pantomine do not actually enter. Especially is this true where the weapons displayed are explained by show cards and have a historic and, if possible, a local interest.

The second aim is to emphasize the value, completeness and perfection of the modern weapons which also form part of the display. The placing of the old and the new side by side forms a singularly striking contrast, and brings out the value of the modern fire-arm most effectively.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Canada Plates—Advance in Ordinary and All Bright.
Turpentine—Advance of 1c.
Linseed Oil—Advance of 3c.
Liquid Paints—Some lines advance 15c

Toronto.

Linseed Oil—Advanced 2c.
Turpentine.—Advanced 2c.
Tin.—Cut 1c.

MONTREAL.

Sept. 16. Although the London tin market fell away during the week, local figures did not follow, and jobbing prices were quoted around 37c. Neither in advances nor in declines does the local market respond at once to the primary markets, although, of course, in the end it is always affected. Copper, spelter and lead are all unchanged. An advance has been made in Canada plates, ordinary going from $2.40 to $2.75, and all bright from $3.50 to $3.70. Trade has been very good in plates, and the fall movement is strongly marked.

Orders generally are coming in freely, and there is a good tone all the way round. More booking is being done as the end of the west bound shipping draws near, while from now on the inland boats will be taking heavier loads.

As we have said, the speculative movement in tin in London easied up during the week, but whether this was mere juggling before the arrival of Banca sale or the real commencement of the slide remains to be seen. Copper was about the same strength. Spelter is still showing higher figures in London, while at St. Louis the market is getting back to the prices obtaining before the last decline. There is an improvement in pig iron and steel in the States, but it is not considered as satisfactory as it might be, being no more than to be expected at this time of the year. The railroads are still conspicuous for their absence from the market for any important tonnages, although there is a better call for small structural work placed since the first of September for bridges and buildings. There is one good sign in the fact that accumulated stocks of finished materials are gradually being reduced. Prices on the whole are being firmly held.

Pig Iron—The local situation in pig iron remains unchanged. Orders are being placed freely for imported iron, for late delivery. Scotch brands are in good request. Canadian furnaces are reporting fairly good business, although there is no great rush on. Fall business is improving. Cleveland warrants are fluctuating, and there is evidently not such a good tone in the Old Country as formerly. The labor troubles seem to be a disturbing element. Prices in the States, both in pig iron and steel are being fairly well held. There is a lack of forward buying, users ordering just as they want the metal. On the whole a feeling of disappointment is felt that a better inquiry is not in evidence.

Tin—Tin locally is still quoted around 37c, the drop during the week in London not affecting the local market. Trade has held steadily all the way along, and the higher prices have not held off business to any great extent, as many users are in want of the metal. Inquiries show that a close watch is being kept on the market. The decline during the week in London may be mere manipulation, due to the fact that a Banca sale is due, or to the fact that the bull party cannot carry their tin any longer. In the meantime legitimate buyers have been held up, and forced to pay the price. Naturally no more buying is being done than can possibly be helped, especially as the chances are about even as to whether the squeeze can be continued or not.

Copper—Copper is unchanged at 13½c with trade showing a better movement. There is more life to inquiries, and prospects look good for a satisfactory fall business. The New York market has shown slightly better strength, although the Producers' statistics proved that the immense production has not been decreased to any appreciable extent. Still the London market helped things a little, and holders in New York are not showing too great a weakness in tempting sales.

Spelter—Spelter is unchanged, but firm in tone. Good business is being done. The English market continues to advance, while St. Louis looks to be in for another boom in prices.

Lead—Lead is unchanged, both for domestic and imported. Fair trade is offering. Lead is fluctuating in London, but on the whole has a stronger tendency.

Scrap—Scrap is fairly active, with prices on the whole unchanged. We quote: Heavy copper wire, 11c; light copper bottoms, 9½c; heavy red brass, 8c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, $12; machinery cast scrap, No. 1, $16; stove plate, $12.50; malleable, $9; miscellaneous steel, $5.

TORONTO.

Sept. 16.—The general condition of trade just now is somewhat slower than a week ago. Buyers are not at all so numerous, nor does there seem to be the same interest in metals.

Tin has declined again, and stock of sheets and plates are getting low, owing to insistent and seasonable demand. These are the two chief incidents of the week.

Trading in iron is fair and in copper steady. The other metals are unchanged in prices and conditions.

Pig Iron.—Small inquiries are the order this week, and trading is quiet. There is still a straining for business by both Canadian furnaces and English jobbers. Scotch iron continues to hold its position firmly. Deliveries are for small lots. Booking for futures is almost entirely absent, but there is still the hope that the closing months of the year will show good results, though orders are not expected to be as heavy as last year. Stocks of imported iron will undoubtedly grow larger during the next month, as the close of navigation will cause a rush in of English and Scotch irons. Quotations remain as at last issue. No. 1 Canadian foundry iron is at $20, and No. 2 at $19.50, f.o.b. furnace. This is for both Hamilton and Midland. Toronto prices are 50c above these quotations. Middlesboro No. 3 is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Scotch irons are about the same figures. Jarrow is $20.50 and Glengarnock, $22.50.

Tin.—The corner in tin has been broken, and immediately the price has declined. The price this week is 37c, one cent lower than a week ago. It looked more like higher prices when the market opened on Monday, and higher quotations were expected, but the London tin syndicate was obliged to let go its grip. There will be no sudden falls, however, —stocks in this country are too low for them to occur.

Sheets and Plates.—The consuming demand is improving rapidly; so much so that stocks in many jobbers' hands are playing out. Already advances have taken place in outside markets, but beyond a tightening of quotation strings there have been no changes locally. Canada plates are the most scarce line. Jobbers state there has been very slow delivery from manufacturers, and if supplies are not hurried forward at once orders will have to go unfilled.

Copper.—Trading is active, but prices are irregular. The local quotation remains at 13½c. Large consumers are holding off. Small lots for immediate use are the principal items of business.

Lead.—The good demand reported a week ago still holds unchanged. Stocks are fair, but none too great for present trading. Quotations remain at $3.80 for English lead and at $3.75 for Trail.

Spelter.—This metal is very active again. The price remains at $5.75. However, it is firm at that figure. All the primary markets report firm and higher quotations.

Old Materials.—Sales are none too frequent, and stocks are growing. Dealers are paying this week for heavy copper and wire 11 to 11½c; light copper and bottoms, 9¾c; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½; No. 1 wrought iron, $10; machinery cast scrap No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

September 16.—The market is undisturbed by any price change, and trading conditions are as favorable as they could be. There is in evidence a general fall movement and dealers are buying confidently and with more freedom although there is but little speculation.

With the return of householders from the country a stimulation is noted in general utility lines. Kitchen utensils, sadd irons, wringers, washers, window cleaners, mops, pails, enamelware and similar lines are prominent. Stoves are beginning to move well, especially as the weather locally has had somewhat of a cold snap to it at times. Horse blankets, cow ties, lanterns and sleigh bells, are moving now in very active fashion, while there is no let up in the demand for guns, ammunition and allied lines. Boot calks are also showing strength. The decorations for the Eucharistic conference in Montreal caused a run to be made upon nails and with the various stands, public and private, most dealers have had their stocks cleaned out. Skates and hockey stocks are being booked more freely, and a good season for these lines is anticipated.

Seasonable Lines.—General utility lines are moving well, and rush orders of an assorted character continue to come in. Bread makers, food choppers, wringers and allied goods are in very active request. Tinware is reported to be a good seller. Fall lines such as lanterns, cow ties, halters and coal hods are moving briskly, while there is better booking for sleigh heaters, weather strip, and snow shovels. Lumbermen's supplies in the shape of boot calks, axes, and axe handles are also showing stimulation.

Builders' Hardware.—Trade is brisk, some good orders being received for locks, lock sets, bolts and butts. The month has opened out well so far as new buildings are concerned, and the demand for builder's hardware promises to be well maintained. The market is firm, and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Sporting Goods.—Still to the fore sporting lines are in very brisk demand, and the call for guns, ammunition, decoys, knives and camping requisites is very prominent. Skates and hockey sticks are receiving stimulation, while orders are now being placed for toboggans, sleds and snowshoes. There is a very bright tone all the way round in sporting lines.

Bolts and Nuts.—Bolts and nuts are in good demand. Nails have been in strong request locally owing to the decorations and stands for the Montreal Eucharistic congress, while the country trade is good owing to the fixing up of barns and fences. We quote: Discount on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—There is a good steady demand all the way round for heavy hardware, and bar iron and mild steel are moving very well. We quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ⅝, $3.25; 1, $3.25; anchors, 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each; and steam gauges, 35c to 80c.

Wire.—Wire is in steady demand at unchanged prices. We quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal. Coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Sept. 16.—For the past week developments in the market for hardware were of a very favorable character, and prospects for a good fall buying movement are encouraging. Inquiries from local and out-of-town distributors are larger and the call for supplies on outstanding orders covered fairly large lines. Orders booked embraced a general selection of hardware, especially fall lines. Shipments are heavier now, and there is a swing and steadiness to trading.

Builders' hardware and guns and ammunition are the leading lines, though sales of household articles and farm and stable goods are splendid, too.

Travelers are sending in large-sized orders, and hardwaremen seem more eager to talk concerning their business and goods wanted.

Fall Goods.—The call for seasonable goods is brisk at present. Demand covers a multitude of articles. Horse blankets, hay and pitch forks, stable lanterns, shovels, and other implements used about the barn and farmyard are some of the wanted lines. Inquiry has opened up for winter goods, and already quite large orders for snow shovels have been filled and shipped. Sleigh bells, cow-ties, and similar goods are beginning to be asked for.

Builders' Hardware—This department is showing great activity at present. The demand is, splendid and it appears as if last year's selling record would be broken. Lock sets, latches, bolts and combinations figure in almost every order received. Building and roofing papers and other similar materials are going forward to Northern Ontario, and to the western sections of the province. Nails and screws are again exceedingly busy. Bathroom fixtures and fittings are increasing in demand. Building tools, are nearly as active as in early spring. Prices are firm and steady.

Household Goods.—Wringers, washers, sweepers, pails, mops, tubs, window cleaners, polishes, etc., are having a splendid call at present. Table cutlery, too, is prominent.

Heating and Lighting Goods.—Stove manufacturers anticipate this season to break all records for a decade past, even the bumper year of 1909, in the sale of stoves. Demand has been great,—beyond all expectations. House lamps and stable lanterns are moving steadily and well.

Heavy Hardware.—The call is still for pipe. Demand is splendid too, for sheets and Canada plates ever since the beginning of September. Stocks are being denuded. Bolts and nuts are firm in price with a good demand in progress. Rods and bars are improving in sales. Structural steel is as active as ever.

Sporting Goods.—Shot-guns, rifles and ammunition are the big sporting articles going forward just now. Football supplies are moving quietly. Inquiry for skates has opened up. Also there have been calls for hockey sticks.

U. S. METAL MARKETS.

New York, September 14.—The Iron Age says: Producers and consumers of iron and steel continue to keep in close step, and it is recognized that for some time distributors and buyers will work on a minimum margin of stocks. With some exceptions, chiefly in pig iron, contracting for far forward deliveries will be avoided until more can be found out of the probable extent of the revolution now under way in politics and business.

Pig iron has had most attention in the past week, but even here it is chiefly inquiry that is reported. Normally, heavy buying for the new year would be in order this month, and consumers are showing interest, but furnaces do not want 1911 business at this level. It remains to be seen to what extent this position will change as the month advances. In the East particularly there is talk of blowing out more furnaces, now that the end is being reached of the profitable contracts taken early in the year. The pig iron buying of the week has been mainly from pipe works.

Billets and sheet bars are weak, and on the former buyers expect concessions from $24.50, Pittsburg.

In the main new business in finished steel is better than in August. Competition is sharper in spots, and cuts of $1 a ton have been made in narrow and medium width plates.

The wire trade apparently leads in activity. Export rail business is good, sales of 25,000 tons being made by the Steel Corporation for shipment to Australia, besides fair orders to Brazil and other countries.

The United States Steel Corporation is operating 67 per cent. of its blast furnace capacity, 45 furnaces being now idle, against 42 Sept. 1, 39 Aug. 1, 35 July 1 and 31 June 1.

U. S. IRON TRADE.

Cleveland, Sept. 25.—The Iron Trade Review, says: The iron and steel market is not making as favorable a showing as expected for this season of the year. In most instances, new business is for immediate shipment, indicating that stocks are low. There has not been a great deal of forward buying so far. Except in one or two lines, fewer reports are heard of price concessions. Trading has been done in a quiet way and on the surface the market is not very active.

HARDWARE TRADE GOSSIP

Ontario.

Geo. Beckett has sold his hardware business at Goderich, to Geo. Wilson.

The assets of Geo. Cote, dealer in paints and wall paper, Ottawa, were sold on Sept 14.

Mrs. Mary E. McGlashan, window of the late Leonard McGlashan, Niagara Falls, Ont., died at Guelph, on Sept. 8.

Albert D. Kennelly, manager of the McClary Mfg. Co.'s Toronto house, has returned to his post greatly benefited in health after a three-month's absence spent in Muskoka.

Flowers & St. Ledger, sheet metal workers and roofers, Toronto, have dissolved partnership. Jno. T. Flowers will continue the business.

J. Mitchell, representing James Cartland & Sons, brass founders, Birmingham, England, called on the Toronto hardware jobbers this week.

H. H. W. Foget, of Toronto, is suing Edward Currie, also of Toronto, for $2,500 and interest from July 12, 1909, which he claims due as a balance on sale of Ontario Metal Novelty Co. to the Gendron Mfg. Co.

George Davidson, for years a member of the firm of McKiggan & Davidson, Woodstock, and A. L. McInnis, who has been in business on Reeve Street there, have combined in a heating, plumbing, tinsmithing and general hardware business.

William Bell, father of J. H. Bell, hardware dealer, Mattawa, died on Sept. 6, after a lingering illness of several months. The funeral which took place on Sept. 8, under the direction of the Masonic Order was largely attended and bore striking testimony of the high esteem in which Mr. Bell was held by all in the community.

Frank A. Child, hardware and iron merchant, Matheson and Cochrane, New Ontario, is erecting a store at Kelso Mines, mileage 222, on the T. & N. O. Ry. and intends to put in a stock of shelf and heavy hardware. This point is at present the only direct way for prospectors going into the Porcupine, Kelso being situated seventeen miles north of Matheson and thirty miles south of Cochrane. where Mr. Child already has stores.

Owing to increasing business the Hall, Zryd Foundry Co., Grimsby, have found their present building too small, and will erect larger premises. The Grimsby authorities recently voluntarily passed a by-law granting a tract of land alongside the G.T.R. line, allowing of switching and shipping facilities to the company and also loaned $20,000, returnable in 20 years, for the purpose of erecting a new plant. The new building will be 80x400 feet, all on one floor, and the latest machinery will be installed, making the factory up-to-date in every particular. Raw materials will be received at one end and the finished product turned out at the other. The action of Grimsby's council shows that the authorities have faith in the present management.

Quebec.

The Canadian Tungsten Lamp Co., Montreal, has been registered.

The Robertson Foundry Co., Robertsonville, has obtained a charter.

L. Paquette & Frere, hardwaremen, Montreal, have been registered.

C. Labelle, of Quebec, was a caller on Montreal hardware circles this week.

Russel & Gifford, dealers in hardware specialties, Montreal, have dissolved.

J. Fennell, Berlin, Ont., was a caller on the Montreal hardware trade this week.

C. P. Wright, hardwareman and grocer, Aylmer, has closed his business there and removed to Ottawa.

N. D. Delisle, of the North Shore Power, Railway & Navigation Co., Quebec, has been on a visit to Montreal.

J. Taylor, Montreal representative of the Pittsburg Perfect Fence Co., has been in Ottawa demonstrating his lines.

The Sherbrooke Iron & Metal Co., has been dissolved, and the Sherbrooke, Metal & Hide Co. has been registered in its stead.

H. C. Woodside, sales agent of the Pittsburg Perfect Fence Co., Hamilton, has been calling on the Montreal hardware trade.

L. E. Labrecque, manufacturers' agent, Quebec, was a caller at the Montreal office of Hardware and Metal this week.

B. J. Dixon, formerly with Lewis Bros., is to be married to Margaret McHattie next week in Montreal, at the residence of the bride's parents.

T. Blaikie, Montreal, representative of the Dominion Wire Manufacturing Co., Montreal, has returned from a trip down the Gulf to the Sydneys.

W. R. B. Leslie, representing the Dominion Wire Manufacturing Co., Montreal, in Eastern Ontario and Quebec, has returned from a trip through the Rideau Lakes on his motor boat.

Joseph R. Henderson, president and general manager of Brandram-Henderson, was called away to Halifax, owing to the death of his son Phillip. The sympathy of the whole trade will be extended to Mr. Henderson.

Western Canada.

Henry & Humphreys, hardwaremen at Vancouver, have dissolved.

Joseph Seve has opened a hardware and harness store at Makinak, Man.

Sanders & Burnett, tinsmiths, Ethelbert, Man., have gone out of business.

The Imperial Oil Co., are erecting a warehouse at Lanigan, Sask.

C. Hiebert & Co., hardwaremen, Didsbury, Alta., have added lumber to there business.

Egilson Bros., have started a hardware business and implement business at Calder, Sask.

R. J. Wells has sold his hardware business at Earl Grey, Sask., to the A. C. Beach Co.

N. A. McGratten has sold his hardware business at Candahar, Sask., to O. B. Grotte.

S. Harvey, general merchant Durban, Man., has added a hardware department to his store.

Geo. Allan & Co., hardware merchants, Bruce, Alta., have sold their business to M. Cross.

The Waterson & Colp Co., hardware merchants, Bow Island, Alta., has been dissolved.

W. Collinge has sold his hardware business at North Battleford, Sask., to Spragge & Hubbs.

R. A. Anderson, hardware merchant, Gainsboro, Sask., has sold his business to W. E. N. King.

D. G. Smith, hardwareman and harness dealer, McAuley, Man., is succeeded in business by H. Parker.

The hardware stock belonging to the J. R. Fairfax estate at Fairfax, Man., has been sold to Hannah & Son.

Duncan McDonald, hardware merchant at Shoal Lake, Man., has sold his business there and intends moving further west.

The Rollefson Bros. Co., Hanley, Sask., have sold their hardware stock to Ed. Moore and D. M. Dilly. The new firm will be known as Dilly & Moore.

Wm. Hargraves, hardware merchant, Kamloops, B.C., is opening a store at Merritt, B.C. He has secured a corner lot there and will erect a business block this fall.

Industrial Notes.

The $45,000 addition to the Oliver Plow Works at Hamilton, will be built by David Dick & Sons, Welland.

The National Iron Works, Toronto, are doubling the size of their plant. They expect to complete the alterations by the middle of October.

Port Arthur ratepayers last week carried a by-law authorizing an agreement to be made with Robt. Greig, Toronto, whereby, for a grant of a site. his company, a branch of the Ironclad Co., of New York, will establish enamel works there to employ not less than 200 men.

TO ENLARGE STOVE PLANT.

Clare Bros., Preston, Ont., are understood to have bought additional land to their present property on which they will enlarge their stove manufacturing plant to double its present capacity.

A Strong Method for Keeping Trade at Home

Stayner Retail Merchants Talk in Business Terms to the People of Their District—Make Direct Appeal to Not Only Their Sense of Loyalty, But Show Them They are Better off Financially in Spending Their Money in Their Home Town—Actual Instances Where Better Prices are Given Than by Mail Order Houses.

To get the trade of people who are always looking for the best price you have to SHOW them. To do this, good, sound business reasoning is practically the only way to permanently prove that you have the goods, that your prices are right, and that these people are actually losing money and time in sending their orders to outside centres.

Bell & McEachern, general merchants, Stayner, Ont., aim to SHOW the people in their district by appealing to two of their senses—their sense of loyalty to their home town and their sense of business acumen. As a matter of loyalty they should support their home town by buying at home and keeping their money there; but more important, they should buy at home because the prices are better, because the value of real estate is lessened if the money is sent away, and if the merchants are not successfull. Bell & McEachern say:

> "Hitherto our policy has been to ignore the practice complained of entirely, particularly the sending of mail orders, but it has become so widespread and appears to be gaining ground so rapidly that the prophecy of a prominent merchant not 75 miles from Toronto, that before ten years all business places outside of the large centres would be reduced to the status of a peanut stand, does not appear so wild as it sounds. Although we do not feel so pessimistic about the situation, it strikes us that we can no longer ignore it."

On June 30—the day before Dominion Day—they ran the following advertisement in a three-column space down the entire left-hand side of the front page of the Stayner Sun, the word "Loyalty" being in large black type, with a rule beneath, and there being plenty of white space surrounding the whole matter:

LOYALTY.

"To-morrow will be Dominion Day—the day on which we celebrate the confederation of the various provinces of our country. Surely the note of patriotic pride and fervor will be dominant throughout its length and breadth.

"Think of its magnificent size; its potential wealth; its sterling people! Three thousand five hundred miles in length; sixteen hundred miles in breadth, our boundless wheatfields; our hidden stores of minerals; our mighty tide of immigration—from three to four hundred thousand a year; our healthy, happy people. No wonder we sing with heart and voice, "God Save Our King, and Heaven Bless the Maple Leaf Forever!!"

"Loyalty to our country has built up our industries, conserved our farming interests, and is making of us a strong, sturdy, self-reliant nation.

"What do we think of the man or woman, who, enjoying all the privileges that citizenship brings, decries our land, our industries, our products, and gives his trade to a foreign country? His loyalty might well be questioned.

"A nation is simply a big community, made up in its integral part of small communities such as our own, reflecting their habits of life and thought; and yet what do we find many of our people doing locally? Following this very thing! If not actually decrying our town and business houses by word of mouth, they are doing so by practice. The ultimate outcome of such a course, if generally pursued will be that Stayner, and all other rural towns and villages will cease to exist.

"As business men we ask no favors, we make a straight appeal to your patriotism, to your sense of fairness, and at the same time to your self-interest, for the body politic is so constituted that what affects part affects the whole, and by sending your business away from your own town whether you are a farmer, a tradesman or a mechanic, you depreciate to that extent your own property. Why is it that farm land around the City of Hamilton to-day is worth from $500 to $1,000 per acre; or $1,000 to $2,000 around Toronto? Do you suppose if the people of Hamilton had sent their trade to Toronto, or the people of Toronto had sent their trade to New York that present conditions would obtain? Not much. These people were loyal to their respective towns in their small days and these results followed.

"As we stated before we ask no favors. If we cannot supply goods,—reliable goods—at as low a price as you can get any where we do not ask your trade, but we claim we have a right to expect it on even terms if nothing more.

"Here are a few instances that have lately come under our notice:—An order came in from a lady for three toilet sets—plain white ware at $1 per set. In it she said, "I was told I could not get these anywhere but at ——— (naming a Toronto departmental store) at that price and I was surprised to find that you had them.' Here was an order probably going out of town on which freight and packing would have to be paid—the latter at least even if it was a $25 order, adding from 10 to 15 per cent. on their cost; and going to swell the income of a multi-millionaire who never contributed five cents for the welfare of Stayner or five minutes for its upbuilding in any way.

Another letter order reached us this week asking—among other things — for six window shades, 'if you have anything similar to the enclosed clipping.' The 'clipping' was an illustration of a shade either in cream or green at 25c. Our price on the same article is 22½c.

"This week again we came across a magnificently illustrated summer catalogue from the same source quoting special prices for summer needs. On the back page, priced in large red ink letters to indicate something very special is advertised an Arabian Curtain Cloth at 24c. We have identically the same goods, and our ordinary every day price is 25c and we are making our ordinary legitimate profit on it, and so on through the whole catalogue.

"The same remarks apply to the practice of running to Collingwood or Barrie. Why should you build up these places and communities at the expense of your own? You will loose more on the value of your own farm if you destroy your own town as a market place than all your imaginary savings would amount to in a life time.

"Be sane, be sensible, bring along all your catalogues, your sale bills—common every day loyalty demands that you give us and the rest of our business people a fair show—compare prices fairly and honestly, and if we cannot do as well for you as any business house in Toronto or any other place we will not expect you to buy. Isn't that fair?"

BELL & McEACHERN,
"The House That Does as
It Advertises."

KINNEYISMS.

Don't hunt a job smoking a cigar.

There is no profit in cocktail acquaintances.

Most fortunes are made by going into debt with good judgment and paying out by self-sacrifice.

Every man is run from the waist up or from the waist down. All men come in one class or the other.

A clerk cannot distinguish himself doing "just as well" as his fellows. He must bring himself into notice by doing something unusual.

Men are half God and half beast. Always count on both.

A western inventor has devised a saw, in the handle of which is a receptacle for oil which may be used for lubricating the saw. The oil receptacle is provided with a valve connected with a spring-pressed button which may be operated at will to deliver oil to the blade of the saw.

News and Methods of Canadian Hardwaremen

Kitchen Window Display at Chatham — Central Heating Experiment at St. Thomas—Port Arthur to Get New Foundry—Vancouver Hardwaremen Hold Picnic.

CENTRAL HEATING UNSATISFACTORY.

St. Thomas, Sept. 14.—Stove dealers here are looking forward to selling heating equipment, either now or next year, to customers of the city's municipal plant, who, on installing the steam pipes disposed of their heaters and furnaces. The system cannot be said to be proven a failure; at the same time its limits are now pretty well defined, and there will be no extension.

Its great defect is in the matter of expense, and unless there is a modification of the scale of charges, those using it may be expected to go back to the old way. For about a year no definite rate was fixed, and it was finally figured out on the basis of the cost of the coal which would have been used by the customer. At a recent meeting of the council a flat rate of 25 cents per thousand cubic feet was decided on.

A bill of $300 was rendered one of the city's clients a few days ago for heating his premises. This about equalled the cost of 45 tons of coal for five months, not unreasonable for the size of his building. The municipal plan being new, however, people expect something cheaper than the ordinary.

The adjustment of a rate based on meter measurement may be econocically more agreeable to householders, but it must be either more widely used or a means found for cheapening the production before it will become popular with coke at $4 per ton.

The scheme grew out of the circumstances that St. Thomas had surplus steam at its power house. It was found easy to pipe this through the library and other public buildings, and extension of the system was begun. As it grew larger, however, the city officials discovered that the supply of exhaust steam was used up, and it became necessary to create live steam. Further, in the far-away points to which it was carried, much steam passed off in waste water, and there was no way of returning it to the power house, as was done in the case of the public buildings, near-by.

The system of piping the steam is not complicated, and details were published at the time the experiment was inaugurated. The city's list of customers is fairly numerous and quite representative, including residences, stores, flats above stores, and a hotel building.

PORT ARTHUR WANTS FOUNDRY.

St. John, Sept. 14.—A despatch from Port Arthur last week stated that the City of Port Arthur had agreed to grant a free site and tax exemption for a period of twenty years to T. McAvity & Sons, of this city, for the establishment there of an iron foundry. George McAvity, a member of the firm states that he has not yet received a confirmation of the report from the firm's representatives there. It was their intention, he said, to move their iron moulding work westward, but would not do so for at least a year or a year and a half. This will probably mean the closing of the St. John foundry, but the brass works will be continued here and eventually work in this line may be taken up in Port Arthur without closing the local works. They will be hampered for room even with the removal of the foundry from St. John, and are anxious to secure a larger site here.

KITCHEN WINDOW DISPLAY.

Chatham, Sept. 14. — The Canada Grain Shocker Co., of Hamilton, recently organized, will locate its new factory in Chatham, an agreement to that effect having been reached last week, the city giving a free site. The company will manufacture agricultural implements, specializing upon a grain shocker attachable to any make of binder.

J. Simon, formerly of the staff of Campbell & Callahan, tinsmiths, has rented the tinshop in connection with Jas. E. Gray's Ark and China Hall, and is starting in business for himself.

The Manson Campbell Co., is adding to its present lines the manufacture of cutters and democrats, the latter being intended for the Northwest trade and being handled through the Gray-Campbell Co., of Moose Jaw.

Westman Bros. show a good kitchen display this week in their large show window. The floor of the window is covered with linoleum. In the centre background is shown a refrigerator, and to the left a handsome kitchen range, while to the right is a kitchen table, covered with oil-cloth and laden with kitchen utensils and conveniences, including spice cans, food chopper, kitchen scales, and other articles. The foreground shows three cards of penknives and other cutlery, while kitchen utensils of various sorts, including a mop pail, bread basin, small grindstone and pans are also shown. Pans of various sorts hung at the back of the window, above the refrigerator, add to the kitcheny appearance of the window.

BUILDING AT LONDON.

London, Sept. 16.—Monday of this week was the biggest day in a long time for the taking out of building permits in the city engineer's office. The nine issued amounted to almost $50,000. Hayman & Sons will erect a three and four-storey brick apartment house at 438 Wellington Street, to cost $30,000. Flavelle & Silverwood, produce dealers, are to put up a three-storey brick warehouse on Bathurst Street, to cost $11,000. The McClary Mfg. have taken out a permit for a one-storey concrete building on Adelaide Street, to cost $5,000. The water commissioners took one out for a substation, one-storey brick, to be erected on Cabell Street, for $3,350, and John McNee & Sons, cigar manufacturers, one for a four-storey brick house at 381 Clarence Street.

Exhibits by dealers in hardware, stoves and building materials are very numerous at the Western Fair this year. Displays of cement machinery are in a new annex to the stove building. Among local exhibitors are the Purdom Hardware Co., Columbia Handle Co., Dennis Wire & Iron Works, London Foundry Co., and London Heating & Plumbing Co. Kilpatrick Bros., show Burrow, Stewart & Milne stoves; J. T. Smith & Sons show D. Moore & Co. stoves; C. Norsworthy, St. Thomas, shows Howard furnaces; J. E. Young shows Findlay Bros. stoves, and Westman's Hardware shows Moffat ranges. Other hardware exhibits were made by the Hall, Zyrd Foundry Co., Grimsby; Brantford Roofing Co., Harriston Stove Co., and the Enterprise Foundry Co., Sackville, N.B.

HALIFAX MERCHANTS BUSY.

Halifax, Sept. 12.—The Hardware dealers are now preparing for a busy season. The shooting season opens this month and several of the dealers are making window displays of firearms and general sporting goods. There is already a fairly good demand for ammunition and some goods have also been sold.

Some of the lumbering firms are ordering supplies for the winter. The demand as yet is rather light, but from now on it is expected to increase. There is a fairly good sale for glass and there is also some movement in bar iron and ingot tin. Lanterns and rope are selling quite freely.

There is a little stir in the stove line, and some of the dealers have quite a few orders on hand. The change in the weather during the past week was the cause of this activity.

HARDWAREMEN HOLD PICNIC.

Vancouver, Sept. 12.—The employes of McLennan, McFeely & Co. spent Saturday afternoon in an enjoyable picnic to Bowen Island, being the second annual outing tendered their employes by the firm.

The afternoon was spent in sports and games, for which handsome prizes were provided by the firm, presented by Mr. McLennan at the close of the day. The sports programme included a baseball match between benedicts and bachelors, the same two teams later engaging in a tug-of-war. In the first event the married men were the victors, but had to give way to the bachelors in the tug-of-war. Races for the men and also for the ladies were well contested, and a fat man's race provoked much amusement.

Refreshments were served and an orchestra provided music for dancing, which was indulged in during the evening until the time arrived for a return to the city.

GENTLEMEN:—

You can make a larger profit by selling Stephens' Paints, Stains, Enamels. etc., than you can by handling any other line. Big talk, you'll say, but facts prove it. Your customers want Stephens' goods, and are going to get them somewhere. You can make a big profit by getting in a line at once.

Everyone in your territory will have Stephens drummed into them this coming Spring and Summer till they will say "Stephens" in their sleep. You will profit by it if you have our lines. Remember—the people of the West are loyal to the people of the West—and on account of that we are again in a position to interest you.

You send us an order for anything; your order reaches us say the following day; it leaves here filled complete, you get it promptly—your customer gets it promptly. Both you and your customer are satisfied and come back for more.

Isn't it an ideal proposition all round? It is, and we live up to our ideals.

Yours truly,

G. F. STEPHENS & CO., Limited.

Fifteen Years Making High-Grade Hockey Sticks

Look for the stamp on all our high-grade patent sticks. We hold patents on our left and right and groove handle sticks.

Ask your Jobber for the Salyerds Stick, and you will get Quality.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg Hardware Quotations.

Winnipeg, Sept. 15.—The trade is excellent in a very wide range of goods just now. Builders are ordering freely for finishing materials, and interior fittings. Farmers' supplies, including wire, lanterns, barn fittings, etc., are being ordered extensively this week. Household goods, which include a wide range of supplies, are the leading lines that are going out at present. Stoves, stove-pipes, weatherstrip, enamelware, cutlery, clocks, etc., are having a wide sale just now. Sporting goods are also going out well, and the season's trade is likely to be excellent in these lines. It will be some weeks before merchants everywhere will have their fall and winter stocks on hand. The habit of slow ordering on the part of the merchants, coupled with the fact that transportation is not the best now owing to the heavy traffic of wheat to the east, and the additional reason that wholesalers find it difficult to dispatch the great volumne of orders at once, will hold the trade back somewhat. But the retail trades are all in good condition. Money is quite free, and the coming season's trade as a whole looks very bright. Wholesalers report collections very fair this week.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75.

Auger Bits—"Irwin" bits, 47½; other lines, 75 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—planished copper, 33½c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, $4; pressed standing seamed roofing, 28, painted, $3,20; galvanized, $4; 26, $3.55 and $4.35.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 10; diamond, 50; granite, 60 per cent.

Fittings—Wrought couplings, 60; nipples, 75; malleable fittings, 25; bushings and unions, 60.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.80; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37¾ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2, and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3,30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50. Galvanized, ¼-in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼-in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $4.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper No. 8, 30c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c per lb.

Rope—Sisal, 9½; pure manila, 11; British manila, 9¾; lath yarn, 9¼c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—21c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $8.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.50.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box. $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2.90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.75.

Paints and Oils.

Strength characterizes the situation in paints and oils this week. A local jobber stated to-day that higher prices on the general line of paints and oils was inevitable. The demand in the west is daily growing greater for all kinds of paints and finishing materials. Wholesale stocks are kept low continually and western distributers find it difficult to make satisfactory deliveries.

Linseed Oil.—A very firm market prevails and reports from the U. S. are that an effort is being made to buy heavily of the Canadian seed. This will tend to advance the future market very soon. The report is that the U. S. crop is about 8,000,000 bushels short and that the market there is steadily going up. The eastern Canada market is very strong and as the oil could not be brought west for the difference in the prices, it seems that the western market is sure to go up a few points at least. Heavy sales are being made at the following prices: $1.06 for raw and $1.09 for the boiled.

Putty and Glass.—Glass is going out just now very heavily and it will be some weeks before the trade will be satisfied, many buildings in every centre in the west are nearing completion and this causes the extra rush in the glass trade. Putty is likewise moving freely and at the following prices: In bbl. lots, $2.50; cases, $2.75; kegs, $3.

Turpentine.—The price is up to $1.05 to-day and there are evidences that this price will be strongly maintained. Southern crops are light, even lighter than formerly reported.

White Lead.—There is a good output of white lead and the market condition has greatly improved within the past few days. Local stocks are large and shipping should be prompt. We quote: $5.50 to $6.25, according to brand.

Varnishes.—A tremendous output is reported for August and the demand continues. Household renovating has began everywhere in the west and specialties for this work are selling well. The quantity of fine interior finishing in new building is enormous and the demand will continue for some weeks yet. Coach varnish is also selling well, and the trade improves generally as manufacturing industries open up in the west.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 24c; Searchlight, 22c; Red Rose, 25½c; Keystone Special, 20c; Pemoline, in bulk, 19c; Silverlight, in bulk, 16c; Acme lamp, in bulk, 28c; White Rose, in bulk, 22c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

JUST as a man is known by the company he keeps, just so is a dealer known by the manufacturer he represents. It's the same in business. If you are handling a line of paints and varnishes that is not well and favorably known, you may succeed in time. But there is always that uncertainty which connects itself with your store and your stock. It is never too late to connect your store with the best.

SHERWIN-WILLIAMS

PAINTS AND VARNISHES

immediately give the dealer the influence and prestige because they have attained in years of satisfaction a reputation second to none in the Dominion of Canada. The entire line is built on quality. Then, too, there is an aggressive, up-to-date organization always behind you and co-operating with you. It is this co-operation which has been the means of making so many successful paint dealers in this country. If you are handling another line, or if you are merely contemplating the stocking of paints and varnishes, you can benefit from looking over our attractive agency proposition. Write for it today. It may mean your wisest move.

Close Study of the Relation of Cost to Retail Price

Henry Johnson Jr., Gives the Retailers Some Sound Advice in This Article—Shows Why 25 Per Cent. on is Equal to 20 Per Cent. off—The Grocery Department of the Catalogue House — Retailer Must Not Pay More Than an 80-Cent Average for Goods Selling at $1—Cost Price Should be Figured on Replacement Value—Points Raised Applicable to Hardware Business.

By Henry Johnson, Jr.

Many years ago, when I was learning the true inwardness of the grocery business in the hard school of experience, an old wholesale grocer said to me, impressively: "Know what things cost—KNOW what things COST—that's the most important thing you can learn." And, being necessarily the basis of the entire structure, surely this knowledge is fundamental.

The trouble is that figures do lie so badly that we must watch them every minute or they will deceive us; and as for tapping the till—why, figures are the greatest thieves you ever saw. But, like the "trusty" in prison, the reformed set of figures is the best and most reliable friend any merchant can ever hope to tie up with. Therefore, let us reform our set of figures without delay.

Some Vagaries of Figures.

Maybe you have tried some of these experiments. Take $1 and add 20 p.c., then deduct 20 p.c. and see if you have your dollar. You surely have not. Take 65 cents and add 25 p.c., then take away 20 p.c., and see what you have. You will have 65 cents. Let me see: 65 plus 25 p.c. is 81¼ cents. 20 p.c. of 81¼ is 16¼, which being deducted, leaves us with the original 65 cents. This illustrates, to some extent, that we must be careful from which end we figure our profits and our expenses.

Department stores are things we do not like, yet they are wonderful organizations. If they were not well organized, they could not live because their average of expense is killingly heavy. It is not uncommon for them to carry a burden of upwards of 30 p.c. on the average. Now, figuring your way and mine, we would say that, in order to "get by" those people would have to make a profit of 33 1-3 p.c. or better; and, to get any velvet, they must work the average up to nearly 40 p.c. But the department store does not figure things that way. They determine that they "must not pay to exceed 60 (or 65) cents for their goods." That means that merchandise to be sold for $1 must cost only 60 to 65 cents on the average.

Not a Profitable Department.

This is what is meant by the Relation of Cost to Retail Prices. But let us follow the department store a little further, just to demonstrate that the grocers have no monopoly of trouble. In the department store there is a grocery department. It is put there as a leader, the intention being to carry it for the advertising, etc., or to plan things so that it will carry itself. But the truth is, it never really carries itself, in a department store, for that is not in the nature of the grocery business. With all the "buying power" in the world and unlimited markets, etc., to draw from, no grocer can work up an average profit of much over 22 to 23 p.c.—and he is a bright grocer who can get it above 20 p.c. The reason is obvious—competition will not admit of wider margins. Thus the department store must work things out so as to carry the grocery department.

To begin with, then, there is the millinery department, with actual, direct expense of, say, 27 p.c., though really I do not know just what it is. To this 27 p.c. must be added, say, 8 p.c. to cover the owner's salary; the office help, general telephone service, the "rest room", the children's school, and sundry other things which must be "spread around" to be carried. In this way the grocery department on the face of things shows an expense account of 24 p.c.—an impossible figure. So the management arbitrarily deducts 8 p.c. from the burden of the grocery department, leaving 16 p.c. of an expense account, and this 8 p.c. is credited on the sales of groceries and apportioned onto the other departments pro rata.

Cost, 80 Cents; Selling Price, $1.

The figuring of the proper margins, etc., on all these departments, keeping track of returned goods, credits, and "mark-down" sales, and all that, is a stupendous and exceedingly intricate task; and, to simplify things, so the matter might be clear to the ordinary man, the plan of working on the Relative Cost basis came into vogue. Thus, the grocer, who is the man we are interested in, finds that, to make any showing at all, he must not pay over 80 cents for his goods.

And this is a system not without merit for our consideration. And its management is simple, once we get accustomed to it. Suppose you start to work that scheme now. Your first step will be to inventory your stock, and figure up the list at retail prices in a first column. Then, in a second column, put down your cost prices, always using replacement values as your cost. Now, add up your columns and you can see at almost a glance what you are paying for a dollar's worth of goods.

Shrinkage in Figuring Profits.

Taking round figures, suppose your first column foots up $6,000 and your second column produces $4,800, you have right before you the "answer" that you are paying 80 cents for your goods. And one vast and helpful advantage here is that you know this is the average of your cost-relation. Such an example, honestly followed out, would set you thinking hard, very hard indeed. I am satisfied it would set you about the task of raising the average materially, for I believe you would agree with me that such a high cost-relation was too dangerously near the limit at which the margin might be lost entirely. For it must be remembered that, in all such processes, one takes the full value of each package. One estimates 100 lbs. of sugar in a bag; 49 lbs. of flour in the quarter barrel sack; 119 lbs. in the bag of nuts just in from the jobber. But, in selling these things there is the inevitable shrinkage with which we are all theoretically familiar, but which we do not always remember when we get to "figuring profits."

Now, therefore, let us examine things. We have arrived at the average cost-relation and it has been a revelation to us; let us profit by the lesson. If we find that our cost-relation on our best grade of canned goods has been 70, maybe we can find ways and means to reduce that to 65 or even 60. If we have been giving undue prominence to a breakfast food which we have been told "pays 20 p.c.," but which our critical study demonstrates yields only 16 2-3 p.c. gross, let us lay that away and devote our attention to a line that yields better money.

Absolute Knowledge Obtained.

The point is, that such critical, analytical study of the facts of our business will tend to put us on the sure ground of absolute knowledge, give us our bearings and enable us to read the sextant correctly.

Such thought and accurate care will prompt us to constantly aim to buy and push more profitable goods, which means better goods; which means better trade; which means a higher class business all the way through. I know because I have been there to see. I may say, in fact, that the store of Johnson & Son, which was formerly one of many, is to-day the place where the "best people" like to trade; it is the "fashion" to trade at Johnson's. And, much as we may feel like smiling at such notions, we can usually find a solid basis for the preference. While a lot of women are chattering in a sort of aimless way about how and why they like this or that better than the other, you may properly and correctly conclude that the store they prefer to go to, passing many others on the way, has character and abiding merit.

And that comes about in just one way, gentlemen. It is the result of honest effort along all the various avenues of work, thought, study and business analysis. What say you?

WILL PRICES DECLINE?

Editor Hardware and Metal.—A number of jobbers and dealers in linseed oil and turpentine—owing to the very extraordinary prices—have made several inquiries from me as to the possibility of an early decline, and I thought possibly you would not mind being a medium to answer some of these inquiries.

First, in regard to linseed oil, we all recognize that the present price is extreme and possibly hardwaremen and consumers think they are being held up, either by the Canadian producers or by the jobbers. An examination of the flaxseed market is the only guide in this matter and the crop in the Dominion of Canada is not a large factor in regulating this price. The East Indies, of course, is one of the large producing countries and the prices for such seed for the next three months must regulate the British market. The cost for Calcutta seed as now quoted in England would make oil—produced and shipped to Canada, freight and duty paid here, without any profit for the English crusher—cost, allowing the full price for oil cake, 98c per gallon, so that it will be seen from this source there can be no relief for the next two or three months, unless some extraordinary circumstances occur. The price for flaxseed in Chicago now being double what it was last year at this time makes it impossible to bring any seed from that direction and Americans are willing to buy Canadian seed at Winnipeg at such a price as makes oil cost $1 per gallon produced, without anything for barrels or any profit for the crusher, so that unless some violent eruption takes place in the American market our local price is not at all likely to change until there is relief from seed coming from the Argentine Republic, and as they are only just now sowing their seed their harvest cannot be sooner than December or January.

In the matter of spirits of turpentine, the price for turpentine at the place of production is now higher than it has been at any time in the past eleven years, with the exception of the months of January, February and March in 1907, and the best information that can be gathered from these points—Savannah and Jacksonville—confirm the statements that have been made for the past few months that several circumstances have combined to put the market where it is now. First, the weather conditions have been unfavorable; early in the season very cold and very dry; later more rain than usual; and, when the gum began to run freely, more labor was required in gathering it, making the second reason, the cost of producing, another cause for the advance. But greater than all these the circumstance that effects both turpentine and rosin is beyond any control and sure to affect these lines for years to come.

The growing scarcity of the source of supply—it is claimed that the pine tree will only admit of securing gum from it for five or six years; during these five or six years the bark is taken off the tree up to a height of fifteen feet from the ground and scraped for gum. When the tree becomes exhausted for this purpose it is cut down for lumber. Trees, to begin this process or scraping the bark, must average twenty years old, so that the growth cannot keep pace with the destruction of the timber. From this it is seen that the resources of the forest are taxed three to five times beyond their recuperative facilities and the parties interested in what is known as naval stores, which includes turpentine and rosin, are now seeking to reserve all their forces to educate the parties who own or lease timber lands throughout the Southern States, and they are also seeking to regulate the output with discretion, as they claim that within a very few years the deficit will be worse than it is at the present time.

These high prices for turpentine and rosin have tended to encourage the manipulation of other substances to to take the place of turpentine and one source of this substitute for gum turpentine has been found by using the waste timber. First, this process was begun by heating and burning the timber to extract the gum but as this left a very unpleasant smell of tar another form has been found by which the timber is broken up into small particles and then put through a system of steaming by which the gum is extracted and a quantity of turpentine is produced called wood spirit turpentine. Beside this the inducement has been very great to try mixing, and some have become so expert at the mixing process that it is difficult to detect the mixtures of petroleum and other substances, allowing the ordinary user to be imposed upon by unprincipled dealers.

Adulterated Turpentine.

In the month of March the Department of Inland Revenue applied to me to get them samples of wood spirit turpentine. I wrote some producers who had been asking me to handle their goods and secured samples, forwarding same to the Inland Revenue Department.

The printed report is contained in Bulletin No. 211, and I find in it some very interesting experiments, testing as well a great number of samples which the officers of the Department secured themselves, ranging over a district of country from Halifax on the east to Hamilton on the west. In this bulletin I find they have tested some 75 samples of supposed pure turpentine, out of which they report that fourteen contain petroleum; seven of these are said to have been furnished to various dealers by a company called the Carolina Pine Products Co.; two others are furnished by the Southern States Turpentine Co.; one by the North Carolina Production Co.; one by the American Turpentine Co. and three by jobbing houses, the furnishers of them not being given. This printed report from the Government is worthy of the attention of all dealers in turpentine and it is not out of place to say to them that where prices are cut below responsible dealers' figures, they should be very careful as to the responsibility to them of the seller, as this report indicates some of these manipulators are able to mix so successfully that they think they are safe in defying detection.

Toronto, Sept. 14. E. Fielding.

HARDWARE LETTER BOX

Any question on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? If an immediate reply is desired by mail stamped envelope should be forwarded. If inquiry is of a nature that the correspondent does not desire publicity, he can use initials or non de plume.

Family Banner Stoves.—Illsey Bros., Castor, Alta., ask for the name of the manufacturers of the "Family Banner" stove.

The Gurney-Tilden Co., Hamilton, now known as the Hamilton Stove & Heater Co., Hamilton.—Editor.

Self-weighing Shot Case.—J. O. Cadham, Portage la Prairie, Man., furnishes the name of the Vandergrift Manufacturing Co., Jamestown, N.Y.. as the manufacturer of a self-weighing shot case.—Editor.

Galvanized Wire Nails.—In answer to an enquiry regarding galvanized wire nails in Hardware and Metal of Sept. 3, a list of manufacturers of these goods were given, but owing to an oversight the name of the United States Steel Exports Co., Montreal, was omitted. This company has developed a very large trade in Canada, and they can supply anything desired in this class of goods.—Editor.

BE ON TIME.

If you cannot be punctual to the minute it is better to be ahead of the time than behind it. The one who is habitually behind time loses many of the best bargains of life. He loses the respect and confidence of his fellowmen; he loses faith in himself.

If you have a disagreeable task awaiting you, the easiest way to get it off your hands is to do it at once. "Promptness takes the drudgery out of an occupation." The man who is a little behind time is obliged to hurry so much that he has no time for the beauties of life as he goes along.

He misses the comfort of the one who can take things more leisurely, and he makes himself the object of amusement for others simply because he is always compelled to do things on the run.

If he is behind time in ordering goods, he loses the cream of the trade. If he is behind time in announcing a new consignment, he likewise misses the seasonable custom. If he is behind time in delivering goods to customers, he loses their confidence. If he is behind in paying his bills, he loses the advantage of the discount. In fact, it sometimes seems as if the man who once falls behind is soon enveloped in a series of obstacles little and big.—Michigan Tradesman.

No. 26

THE FOLLOW-UP LETTER.

Follow-up letters are powerful levers in getting business. Probably no other form of canvassing, leaving out the personal call, is so effective. A stock letter is convincing, but if the merchant takes the trouble to impart personal touches to his letters, in fact, writes each one separately—then they have a greatly added strength. In very large and congested communities it is practically impossible to add these personal touches, but in small places or sparsely populated ones, where the hardwareman probably knows everybody by their first names, the case is different. But whether the letter is a personal one or not, it does what many other forms of advertising cannot do—it reaches a probable customer at his home. So does the ordinary circular, but circulars are often thrown away unread or but cursory scanned.

A letter, however, addressed to the householder, is another matter. All the members of the family are probably curious to know what it is all about. The letter, the enterprise of the merchant, and more important still, the matter of paint are generally discussed. The head of the family may dismiss the matter from his head shortly afterwards, but it is more than likely some one else will revert to it again at the next meal, and then the question of paint will crop up again. Thus by one letter the merchant sets many forces at work in his interests. The head of the family may through some obstinancy be averse to doing any painting but once the matter is discussed among the family he is given little opportunity to let the matter slide.

A merchant must not think, however, that one letter is sufficient. It may be in some cases, but not in all. Like all other kinds of advertising it is the repeated knocks that brings about the result. The merchant must keep a careful tally on his letters, and mark down the names of those to whom letters have been sent. When these people have not shown any signs of buying paint he must get after them again with another letter, taking care to word it differently. Do not make the great mistake of sending the same letter or then it loses the characteristic of a letter and becomes a circular, and the next one may be thrown away unread. The great thing in these letters is to make them interesting, and to do away as much as possible with the ordinary advertising expressions that are met with in circulars and the columns of the local newspapers. Hold the attention of the reader, that is the

YOUR store can safely sell one brand of paint and be sure your fussiest customer will come back and tell you he is satisfied. These paints come in tins labelled

Great holding and driving qualities.

THE MONTREAL ROLLING MILLS CO.
MONTREAL

point to be aimed at. If the first letter is interesting then the farmer, or whoever it may be, picks up the second letter and recognizing the sender, says: "I wonder what Mr. Dealer has to say about painting this time. I believe I will call in and see him to-day." Thus the lever works.

Too long a space of time should not be allowed between each letter. The fall painting season is none too long, and it is best to strike while the iron is hot. In these letters, besides pointing out the value of painting be sure to enlarge upon the merit of painting in the fall. There is a very popular impression that the fall is not a good time to paint. This should be corrected at once.

PAINT AND OIL MARKETS

MONTREAL.

Sept. 16. Turpentine and linseed oil continue to be the predominating features of the paint and oil market. In fact little else is talked about. With prices advancing steadily in Savannah it was only to be expected that local figures in turpentine would firm likewise, and the 1c increase taking effect this week is low considering the situation here, and the prices obtaining in Toronto. Linseed oil presents the same position as it has shown for months, a scarcity of oil, high prices in England and a growing local demand. Here again an advance of 3c was only natural. In fact, higher figures are expected at any moment. No other changes are reported, but naturally all lines are very firm in sympathy with turpentine and linseed, white lead ground in oil especially.

Trade generally is very good, and orders are of a well assorted character. The prospect of higher prices all the way round is stimulating buying, and many a speculative order is now being placed.

Turpentine.—With the higher figures obtaining at Savannah, and the general firmness existing in the paint and oil market generally turpentine prices locally have been advanced 1c. There is a brisk demand, and some buyers are buying well ahead anticipating still higher figures. We quote 97c.

Linseed Oil.—The scarcity in linseed becomes more marked as time goes on, and with the English market advancing local prices naturally follow suit. The market is simply barren of stock, and the buyer of single barrel is more welcomed than the one who wants 20 to 30. In fact holders are very reluctant to part. This condition is not confined to Canada alone. It is shown by the following cables that recently passed between a local agent and a prominent English house. The agent cabled.—"I can place 500 barrels of linseed. What commission?" The house cabled back promptly "Would rather pay you a bonus to keep out of the market." In anticipation of higher prices, buyers are extending themselves so that the demand is brisk all the way round. In these circumstances prices have advanced 3c, with a likelihood of further advances at any moment. We quote $1.02 for raw and $1.05 for boiled.

White Lead.—Indications are that the high figures in linseed will stiffen the price in white lead, and an advance may be looked for any time. Buying is good and the tone all the way round is satisfactory. We quote $5.50 to $6 according to brand.

Paris Green.—Contrary to some expectations the Paris green season has turned out a very satisfactory one. The hot weather of July and August stimulated the demand and almost without exception both makers and holders are cleaned out of stocks entirely.

Varnishes and Japans.—The fall inquiry is now in evidence and the implement factories together with the makers of carriages, pianos, etc., are free buyers of varnish. Household lines are also selling well. The competition is very keen in varnish lines, and the market is being well catered to. Despite this, however, everyone is talking of satisfactory trade.

Putty.—Putty is moving actively, and is firm in tone. We quote: 100-lb. drums, $2.45; bladders, in barrels, $2.70.

TORONTO.

Exceptionally high prices are asked for linseed oil and turpentine, both these commodities being at record-breaking figures. A short time ago dollar prices were promised for oil and now that figure is asked for turpentine. Quotations are not even, however, though there is no unsettling effect noticed on the market.

Trading is showing improvement in paint goods this week, and evidently the fall season is opening up. Prepared paints are moving better again, and there is a heavier steady volume of white lead going out.

Linseed Oil.—Even the lowest quotations of linseed oil have advanced 2c higher than a week ago. The lowest figures now obtainable are $1.02 and $1.05 for single barrels of raw and boiled respectively, with a majority of the houses asking $1.05 and $1.08.

Turpentine.—This commodity is this week quoted at $1, a 2c advance over last week. There is, however, a little to be had at 98c still. Trading is only fair in both turpentine and linseed oil. Rosins are still at high prices also.

White Lead.—Movements are heavier and the tone of the market is good. The improvement over a week ago is very noticeable, demand livening up well. Stocks are fairly large. Quotations are unchanged. Pure brands run up from $5.65, with No. 1 tapering down to $5.25. Red lead is firmer, though no change in price has occurred or is likely to take place in the near future. Sales are showing improvement. Genuine red lead in casks is at $4.75; 100-lb. kegs,

Hardest Job in the World

IF you are trying to build up a big paint business with inferior paints, Mr. Dealer, you have got the hardest job in the world before you. You may sell a lot of it—but the more of it you sell the more trouble you are piling up for yourself, and you'll have a merry time trying to explain bye-and-bye. More businesses are wrecked on the rock—"IF"—than on any other. You can't get around the *ifs*—you can't climb over them, nor squeeze through them—*you must get rid of them.*

Martin-Senour Paint—100% Pure

never needs an apology—no *ifs* in its manufacture—no *ifs* when you sell it—no *ifs* to explain after the customer uses it. You'll get rid of every *if* the moment you get rid of inferior paints and begin to sell the Martin-Senour Line—and you will begin to make more money, too. Suppose you write today for the proof of what we say—get our price list and plans to build up the dealer's paint trade.

$5.25; and less quantities $6.25 per hundred pounds. No. 1 is at $4.25 in casks; $4.75 in kegs, and $5.75 in smaller quantities.

Varnishes and Prepared Paints.—A good tone is manifested in all lines of varnish and ready-mixed paints. Household specialties are selling well. Varnish in bulk, owing to the development in industrial trade is improving. Coach, carriage, piano and implement varnish are prominent.

Glass and Putty.—Both these lines are moving freely. This week shipments have been quite large and heavy in volume. Prices are steady with the market firm. Casks of bulk putty are quoted at $2.20, with bladders in barrels at $2.70.

Petroleum.—All coal oil lines are particularly active in movement just now. The market is firm with quotations unchanged. Prime white is 13c; water white, 15c; and Pratt's astral, 17½c.

ADVANCE IN LIQUID PAINTS.

The Canada Paint Co., Montreal, in consequence of the high price of linseed oil have advanced their prices on various lines of liquid paints, 15c per gallon. It is expected that advances will be made all along the line.

PAINT MANUFACTURER BEREAVED.

Great regret will be felt among the hardware trade generally at the death on September 10, at Halifax, N.S., of Philip Henderson, son of Joseph Henderson, president and general manager of the Brandram-Henderson Co., Montreal. Mr. Henderson had been in declining health for two years and acutely ill for the past six or eight weeks. Two years ago he went from Montreal to California in seach of health. No improvement manifesting itself he returned east, and came to his native city of Halifax. His funeral was held on Monday.

CARE OF VARNISH BRUSHES.

Much of the usefulness of a varnish brush depends upon the treatment it receives when purchased. The stock of the new brush should be run through the fingers until the loose hairs and dirt are completely worked out and it should next be placed in clean linseed oil and wiped out over the edge of the cup. The brush will then be fit for use in putting on the under coats of varnish, and after a week or two of this work it will do to use in applying the finishing coats of varnish.

A brush should always be suspended when not in use, and never allowed to rest upon its point, for if this is done it will lose both form and elasticity.

Every painter should keep his varnish brushes in a clean receptacle with a cover fitted tight enough to keep out all forms of dirt. If you happen to drop your varnish brush on the floor while using it, pick it up carefully, and holding it at an angle, flood the dirt off by pouring on a small quantity of turpentine. To clean a varnish brush, wash it in oil first, and next in turpentine. Then by a week's use with undercoats, it will be restored to its orginal cleanliness.

Your own particular requirements can best guide you in choosing preservative liquids for varnish brushes. Thus, brushes which are used every day on good clean work, can be kept in raw linseed oil. In the morning you can rinse them out in turpentine, wipe over the edge of the cup, and have brushes in fine condition for the day's work.

But the brushes which are not used so often, or have any chance of becoming dirty, you must treat differently. The rinsing in turpentine will merely loosen the dirt which will be forced up into the body. These brushes can better be kept in a finishing varnish which should be frequently changed.

Every precaution should be taken lest dust collect on the brushes, and they should never be left lying around for any length of time when not in use. If a cloth is used to clean the handles, it will distribute lint, and this work should be done with a stiff, partly worn brush.—Varnish Talks.

SOME ETHICS OF BUSNESS.

Many theories may be held by the merchant, but the cold facts remain that an enlightened self-interest is the most potent force in a business.

Permanent success is not won by deception, sharp practice, or many other unprincipled methods, but is the reward of a clear conscience, fair dealing and perseverance.

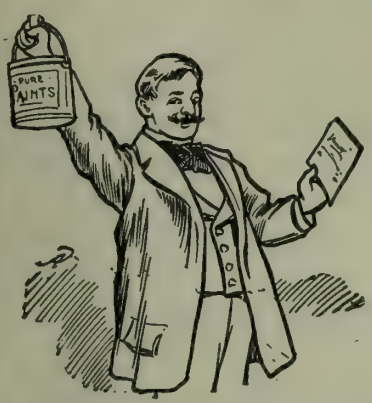
An exchange says: "The commercial agencies and the numerous legislative acts against fraud have made it both dangerous and unprofitable to be dishonest. Experience has shown that it is short-sighted to misrepresent goods; that it pays better to furnish good quality than poor, and that a good name in business is a tangible and permanent asset."

One of the surest methods to success is a close harmony existing between the employer and employes. When a company or firm show by their talk and mannerism that a department manager or clerk is only a nail or spoke in the wheel, and can be dispensed with without loss or regret, then a disorganization will spring up throughout the entire force, which causes mistakes and the loss of many dollars. The dealings between these two classes are all important, for human nature is what makes for the success of all.

We are not advocating anarchy or even disobedience, but for that closer fellowship that every successful concern has been so ready to recognize. This means, when analyzed, that sentiment is an element of success, and that the best efforts are the results of encouragement and enthusiasm. It follows, therefore, that the best results can only be obtained by the best and fairest treatment of the worker. Even if it is a selfish motive it is the foundation of success, and very satisfactory to the toiler.

In the meanwhile each employer in a broad or narrow field should recognize the obligation not only to make the business under his direction successful in its financial results, but to do this, as far as possible, in connection with, and by means of, the development and welfare of those by whom his enterprises are carried into effect.

THE HARDWAREMAN WHO DESIRES TO ACCOMPLISH MORE BUSINESS THAN HE IS NOW DOING SHOULD PURCHASE THE VARNISHES AND PAINTS OF THE CANADA PAINT COMPANY.



PROGRESS MARKS THE DISTRICT WHERE THE CANADA PAINT COMPANY'S VARNISHES AND PAINTS ARE NOW IN VOGUE.

SUCCESS IN ADVERTISING DEPENDS UPON GOOD COPY, A GOOD PAPER (LIKE "HARDWARE AND METAL") AND GOOD STOCK TO KEEP FAITH WITH THE PUBLIC.

FREQUENT ATTEMPTS ARE MADE TO DISPLACE THE MANUFACTURES OF THE CANADA PAINT COMPANY, BUT THEY PROVE FUTILE.

THE SUMMER LULL IN BUSINESS IS SUPPOSED TO BE IN EVIDENCE, BUT THE CANADA PAINT COMPANY ARE RUNNING FULL "BLAST" IN EVERY DEPARTMENT.

THE PAINT CALL

Always in the Fall of the year a great call goes up for paint.

Self- Measuring Systems

For Handling Kerosene and Gasolene

Emphasize one feature that is important aboveall others in the general store—

CLEANLINESS

From the slopping and dripping of faucets and funnels, the porous boards of the floor near the oil supply become soaked through and through, making the appearance unsightly and unclean. In any store, under the old method of handling oil, this condition exists—it cannot be avoided. The merchandise stored near such a place is easily contaminated. After drawing oil, the least odor from the hands or clothes is absorbed by the paper used to wrap up merchandise, which quickly becomes infected with the disagreeable and nauseous taste of oil.

The only system that will remove these objections is one that will hold the oil in a tank absolutely leak and evaporation proof, measure the oil accurately into the customer's can with neither spilling nor slopping, dispose of unclean measures and funnels, and one in which the flow of oil is instantly cut off the moment the desired amount is drawn. All of these features and more are found in the Bowser Adjustable Measure Oil Equipments. They will meet any conditions and requirements, being made in more than fifty different styles.
If you are interested, you need only to drop a card, asking for Bulletin 15, and you will then receive full information.

JAP-A-LAC

A HIGH GRADE

VARNISH AND STAIN COMBINED

To the Hardware Trade in Canada—

We wish to announce that we have completed arrangements to manufacture all of our products in Canada, having established a complete and fully equipped Varnish Manufactory at Toronto.

The large demand for JAP-A-LAC and GLIDDEN'S GREEN LABEL VARNISHES for architectural and general use, due to our extensive advertising campaign in Magazines published in the United States, will be largely increased by our advertising campaign to the consumer in Canada.

We intend to make JAP-A-LAC a household word in Canada, just as it is now in the United States, and it is to the interest of every dealer in paints to carry a stock to supply the demand we have created, and will continue to maintain.

The quality of our goods is of the highest. Our experience of nearly forty years is back of every gallon we manufacture, and our experienced corps of chemists and varnish makers have personal supervision over all our products.

Our discounts to the trade are liberal, thus insuring a satisfactory profit to the dealers who co-operate with us to reap the benefit of our extensive advertising.

We solicit your enquiry regarding our proposition, which is the most attractive ever offered to the dealer.

Stanley Tools

THE "HURWOOD" SCREW DRIVERS shown herewith are mechanically the best Drivers ever offered. Blade, Shank and Head are formed of one piece of steel, finely tempered.

We are now prepared to ship from our CANDIAN WORKS our complete line of Iron and Wood Bench Planes, Block Planes, Bit Braces, Spoke Shaves and Pocket Levels, and as fast as practicable, to these will be added other lines of tools shown in our catalogue.

The word "STANLEY" appears on every tool.

Address all communications to

STANDARD THE WORLD OVER

Stanley Rule & Level Co.

NEW BRITAIN, CONN. U.S.A.

EVERY TOOL GUARANTEED

Maxwell's Latest

is the "Champion High Speed Washer." This machine differs from the famous "Puritan" only in the driving mechanism. The

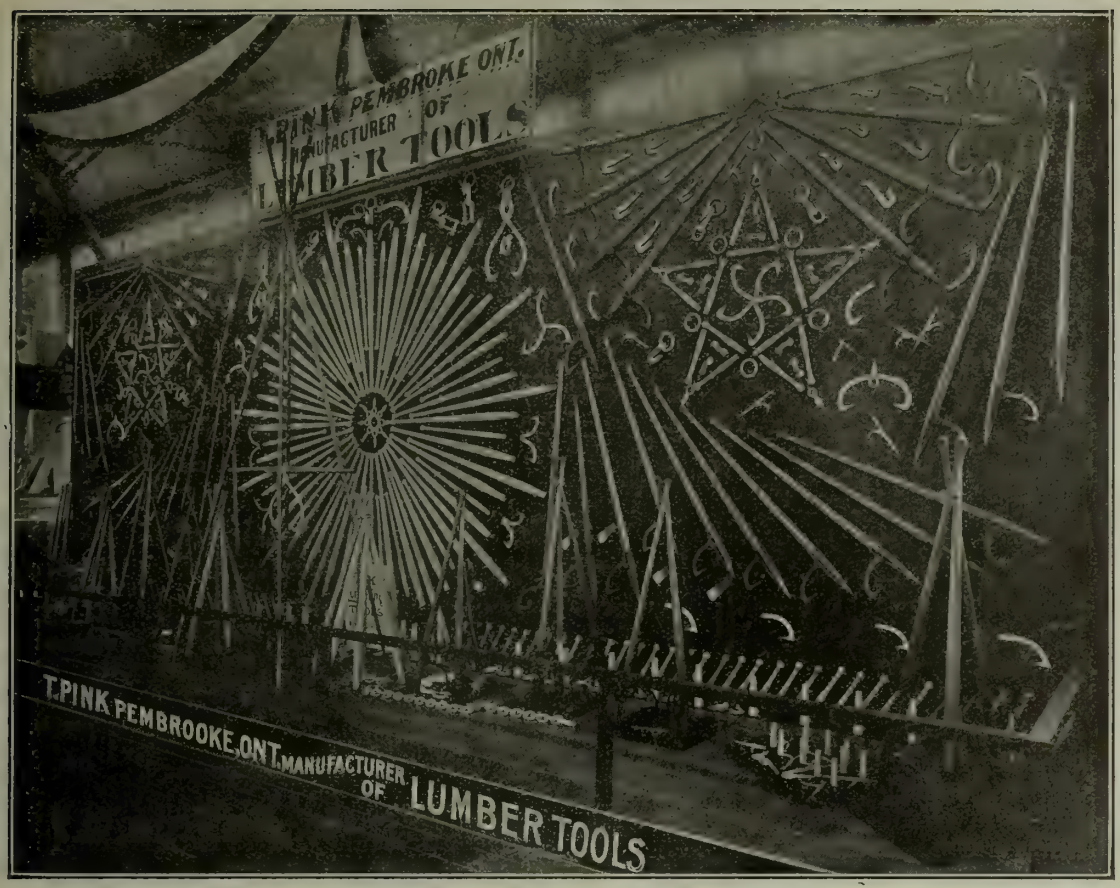
Champion High-Speed Washer

is run, as the illustration shows, by a lever. This lever also starts the balance wheel, which revolves four times for every stroke. The great momentum of this balance wheel helps to turn the dolly block and makes the "Champion" run very smoothly and easily.

It is sure to be a splendid seller.

David Maxwell & Sons : : St. Mary's, Ont.

Good Profits Await You



if you will get out and secure orders for the well-known McFarlane & Douglas line of

Metal Ceilings and Walls

The work is by no means hard, because, with our finely illustrated catalog in your hand, you can easily show your customers where they can save money by using our goods. Metal ceilings and walls are certainly healthier than any other kind—a damp cloth instantly cleans them. They are also fire-proof; very beautiful in appearance and will never fall down. Write for Catalog and Trade Prices.

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

CONGO NEVER LEAK ROOFING

The NEVER LEAK GUARANTEED ROOFING

Congo on Maryland Terra Cotta Company's Buildings—Baltimore, Maryland

We don't suppose you care a rap what Congo is made of what interests you is *how long it is going to wear.* What it is made of interests us because we give with every roll a *Surety Bond Guarantee,* the like of which no other manufacturer has offered.

Herewith are a few of the features that make it possible for us to guarantee Congo 2 or 3 ply for *10 years.*

It never gets hard or brittle. It never breaks or peels off. It is giving as perfect satisfaction in Europe, India and Australia, where we ship thousands of rolls, as in America.

Congo doesn't run, rot, buckle up or shrink.

The caps, nails and cement which we furnish free, are the best money can buy.

We don't use the old *tin caps* for Congo, but *galvanized caps* which never rust.

FREE SAMPLE

You can satisfy yourself as to its lightness, pliability and wonderful waterproof qualities by writing to-day for a Free Sample. As to its wearing properties—we guarantee them. Can any reasonable man ask more?

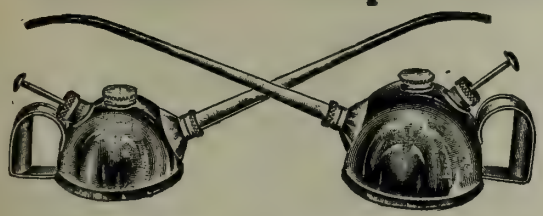
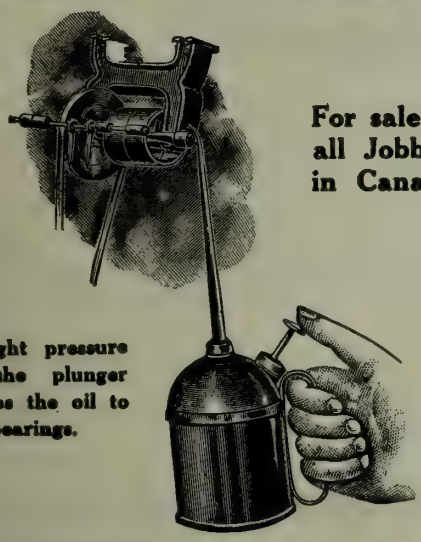
The Ironclad Alarm



THERE'S one thing we can talk about and that's the Ironclad. We've sold close to a half a million of them and we've sold them by talking about them. Some of these talks were written for hardware dealers, for men that believe in the clocks as we believe in them. We've had them electrotyped newspaper single and double column size and we'll lend the plates to dealers that will guarantee to use them.



Make your requests through your jobber. We'll print your name on dials in lots of 24. We'll add a striking window display if you like to send in repeat orders.

Packed 12 in a box with advertising matter. Dealers' names printed free on dials in lots of 24. Height 5 inches. Dial 2¾ inches. Weight 2½ lbs. Rings 35 seconds, can be shut off at will.

Ask your Jobber to quote on the New HAND DRILLS shown here

NORTH BROS. MFG. CO., Philadelphia, Pa.

We Do Not Waste Your Time, Gentle Reader

bragging about "the age of our firm," "the infallibility of our workmen" or the "superior standard of our goods."

We take it that you read these columns, not for the life-histories and self-eulogies of the advertisers, but to find out what is new and saleable and profitable in your own business.

In any advertisement over this firm's name you will find useful, truthful information about seasonable goods, not—to quote Mr. Roosevelt—"hoary flapdoodle" about the antiquity of our business.

We try to fill our space in Hardware and Metal with practical information to interest busy men.

Remember these facts when you read of "GALT" SHINGLES or "CLASSIK" Ceilings.

The Galt Art Metal Co., Ltd. :: Galt, Ont.

Selling Fast!

Why? For more good solid reasons than ever sold a rifle before. Each feature of the Standard Automatic is inducement enough by itself to sell it. But putting them all together, its greater power, increased speed, reduced recoil, light weight, perfect balance, beautiful workmanship, durability, flat trajectory, instantaneous loading and unloading features, and its simple take-down—is it any wonder these rifles have made such a great hit with the sporting world?

TWO MODELS
GAS-OPERATED
HAND-OPERATED
35-30 and 25 Calibres

STANDARD RIFLES
GAS-OPERATED HIGH POWER

BIG GAME SHOOTING

are new. There's no sentiment attached to handling them—but there's good profit instead. And there's added prestige for you—if you carry these highest-class rifles made.

"Big Game Shooting" is an interesting booklet we're sending out to the consumer. We would like you to go over it—and incidentally learn all about Standard Rifles. Let us send you some extra copies for distribution. Write to-day.

The following Canadian Jobbers carry a stock of "Standard" Rifles and can ship promptly: LONDON—D. H. Howden & Co. Ltd. MONTREAL—L. H. Hebert, Lewis Bros., Ltd. FREDERICTON N.B.—R. Chestnut & Sons. Disston

Disston processes of file making have led to a success that is amazing

The buildings which, only a short time ago, many believed would house the department for years to come, are to-day entirely inadequate. Another large two-story building is now almost completed. It will soon be equipped with every modern and valuable device for the manufacture of files.

There can be only one reason for such development, such steady and rapid growth: Disston files are the best, the most satisfactory, the most economical in the World.

More and more users of files are learning these facts every day, and going where they can buy the Disston product.

Thousands of retail dealers are profiting by the reputation and the quality of Disston's brand.

If **you** are not doing so, it's time to begin.

If you are unable to obtain the Disston Brand, write us and we will see that you are properly supplied.

No. 202

There's a Chopper no dealer will be ashamed of selling, the Chopper that cuts meat, does not tear it.

ENTERPRISE FOOD CHOPPERS

are trade builders

Each one sold is an advertisement for the store that made the sale

Each Enterprise Chopper is individually fitted together, the feed screws and cylinders are carefully milled to fit each other, cutting starts as soon as food leaves the hopper. This Chopper does not tear the food, it **cuts** it. Each one packed in paper box.

No. 202 chops 2½lbs. meat per minute, weight 4½ lbs. each, four knives with each chopper, making it suitable for chopping every kind of food.

Price to Dealers $14.40 dozen F.O.B. Montreal

Caverhill Learmont & Co

MONTREAL

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes
(Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

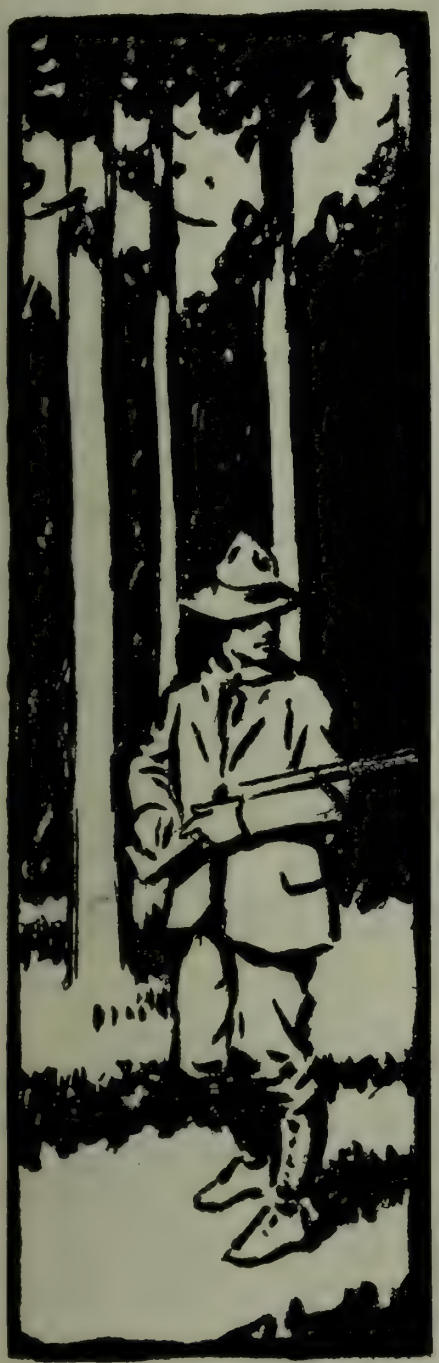
Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.



DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

"Big Hit"

CHICAGO FLEXIBLE SHAFT COMPANY, 250 ONTARIO STREET, CHICAGO

American "Dead Shot" Powder

A line that we can thoroughly recommend for satisfactory performance under all conditions, and one that wide-awake dealers in hunting supplies can afford to push.

"Dead Shot" Powder has been on the market for years and has won a reputation for uniform strength and reliability. The manufacturers have the encouragement of a very successful business to keep them doing their level best.

Our persistent aim is to supply the best goods of every sort in the lines that we handle. **"Dead Shot"** Powder measures up to our standard of good quality. A trial will convince.

DISSTON PROGRESS

1840. Henry Disston made but *few* saws a day.

1850. Made *some* dozens each of various kinds of saws per day.

1860. The Disston Saw Works turned out *hundreds of dozens* of saws per week.
1865. Factory destroyed by fire—rebuilt immediately.

1870. Sales increased to *thousands of dozens* per month. Factory again destroyed by fire and rebuilt.

1880. Mounted up to *tens of thousands of dozens* per month.

1890. Leaped to *hundreds of thousands of dozens* per year.

1900. *Millions* of saws of various patterns were made and *sold*.

1910. Sales still increasing and the demand for Disston brand of saws and tools unprecedented.

THE REASONS: Integrity, persistence, courage, enterprise, knowledge, all united in a constant effort to manufacture and deliver the *best* saws for every purpose which it lies within human power to produce.

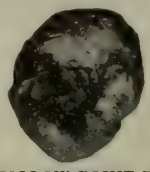
but if you sell

Harris Heavy Pressure Bearing Metal

you make a fair profit and you get repeat orders. This is not just selling talk. But the dealer who handles knows. Sell something that gives satisfaction and you will get repeat orders.
Harris Heavy Pressure Bearing Metal will do it.

The Canada Metal Co. Ltd., Toronto



HOLLOW POINT BULLET

A NEW FEATURE IN METALLIC AMMUNITION

The hollow point increases the shocking and killing power of the bullet because of the greater mushrooming qualities over the solid lead bullet.

HOLLOW POINT BULLET
(Before Firing)

HOLLOW POINT BULLET
(After Firing)

SOLID BULLET
(Before Firing)

SOLID BULLET
(After Firing)

.44 CALIBRE

Note the cross section of the unfired hollow point bullet and its mushroomed appearance as compared with the solid bullet after being fired. Sportsmen can increase the efficiency of their rifles and revolvers in game shooting by using hollow point bullets at a trifling added cost over the old solid bullet.

UMC hollow point lead bullets come in the following sizes:

.22 Short, Hollow Point, Black and Smokeless.
.22 Long, Hollow Point, Black and Smokeless
.22 Lon Rifle, Hollow Point, Black and Smokeless.
.25 Stevens, Hollow Point, Black.
25 Stevens Short, Hollow Point, Black
.32 Winchester, Hollow Point, Black and Smokeless.
.38 Winchester, Hollow Point, Black and Smokeless.
.44 Winchester, Hollow Point, Black and Smokeless.

INCREASE YOUR SALES BY BEING THE FIRST TO INTRODUCE THE HOLLOW POINT BULLETS IN YOUR CITY

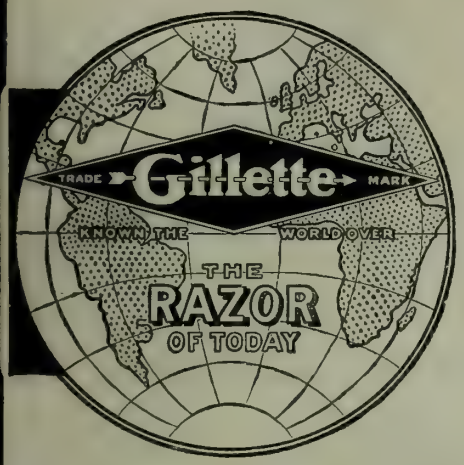
The World's Best Shot Gun

The Only Shot Gun Made in Canada

Few Parts—and all parts interchangeable

THIS IS A VERY STRONG SELLING POINT FOR YOU TO EMPHASIZE WHEN SELLING

The Simplex Action of the Tobin Shot Gun contains fewer parts than are usually to be found in guns of the hammerless type.



Tobin Simplex Guns

And what few parts there are are characterized by the utmost precision of action. They can be examined or removed by the use of a screw driver.

Tobin Guns are hard, straight shooters. Every gun, and all parts thereof, are sold by dealers under our unrestricted guarantee of complete, enduring efficiency. Write at once for the Tobin Catalogue.

Tobin Arms Manufacturing Co., Limited, - Woodstock, Ont.

A SUGGESTION
For Boosting Christmas Profits

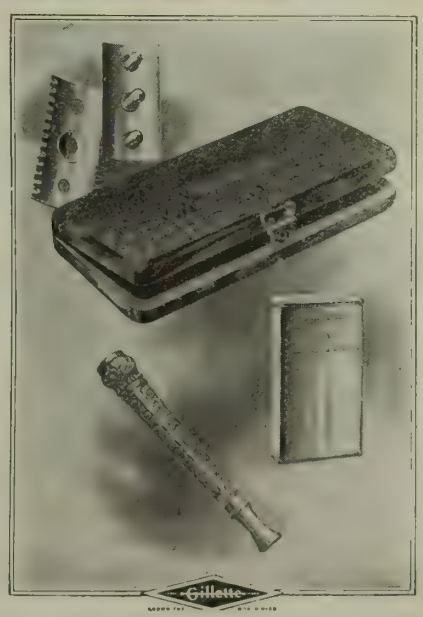
Take one bright young man from among your clerks—a chap who really wants to get ahead.

Set aside for his management, from now to Christmas, a section of a counter or silent salesman in the front of your store, and a small part of your window space.

Order at once a good assortment of GILLETTE Safety Razor Sets—at least 50 per cent more than you sold last Christmas With your order tell us what advertising cards and signs you have and we will enclose with the shipment enough additional advertising matter to make a corking good display.

Then put that young man in charge of your Christmas GILLETTE Department, to give it his special care, and to push it as hard as he can. Give him to understand that it is his opportunity to show what is in him—and that a good showing will be distinctly to his advantage

Then watch your GILLETTE sales and profits go up. Watch that young man develop into a real salesman, and grow more valuable to you.



But why select the GILLETTE for this experiment?

Because you have no other specialty in your store that fills the role of Christmas leader so perfectly. Everybody knows the GILLETTE as the best razor made bar none. Men buy it for themselves—men and women buy it for a present. Its handsome appearance, real every-day utility, and popular price make it the ideal Christmas gift for a man.

Besides, we are backing up the GILLETTE with an advertising campaign, with special Christmas copy, which is not approached by the advertising for any other $5.00 article you handle.

Think over our suggestion, but whether you adopt it or not, **don't put off ordering your Christmas stock of GILLETTES.** We can fill your order received **now**, at any date you specify. Later, when the rush is on, we may not be able to do so.

Is the GILLETTE Depot Sign, shown above, getting a chance to draw buyers to **your** store?

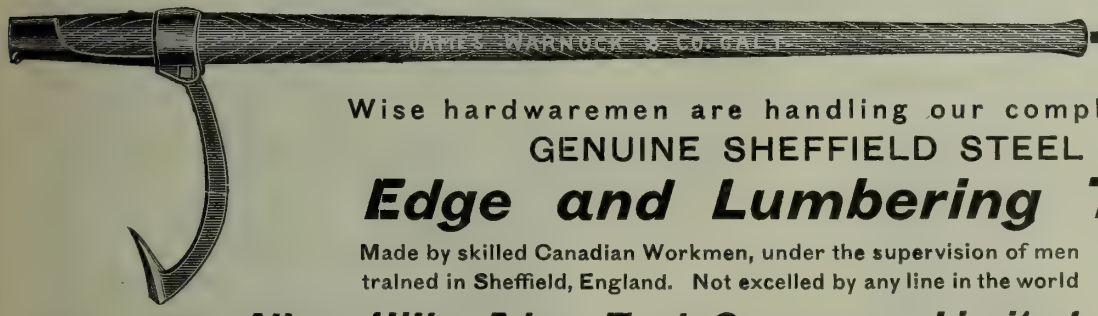
IF THERE'S A GAS WORKS IN YOUR TOWN



You can make extra good profits by taking on an exclusive agency for the "PERFECT" Gas Controller. Every householder or manufacturer who uses gas is a very probable buyer of the

"PERFECT" GAS CONTROLLER

because it reduces gas bills from 15 to 50 per cent. It works automatically, and, once in place, needs no attention and cannot be tampered with. It automatically controls the gas pressure from the meter to the burner, allowing just sufficient pressure to reach the burner to produce absolutely perfect combustion when the light is applied to the tip. A window demonstration always brings a crowd of interested people around the window and results in booming sales. This is a real money maker. *Write for full particulars.*

ONEIDA COMMUNITY, LTD.
NIAGARA FALLS, ONT.

Mr. Hardware Dealer! —How many merchants do you know in your town?

Suppose you know only one round dozen.

If you can show them how to make their stores more attractive—you stand to make some money.

Because they'll do more business.

Before passing up this proposition figure it out for yourself.

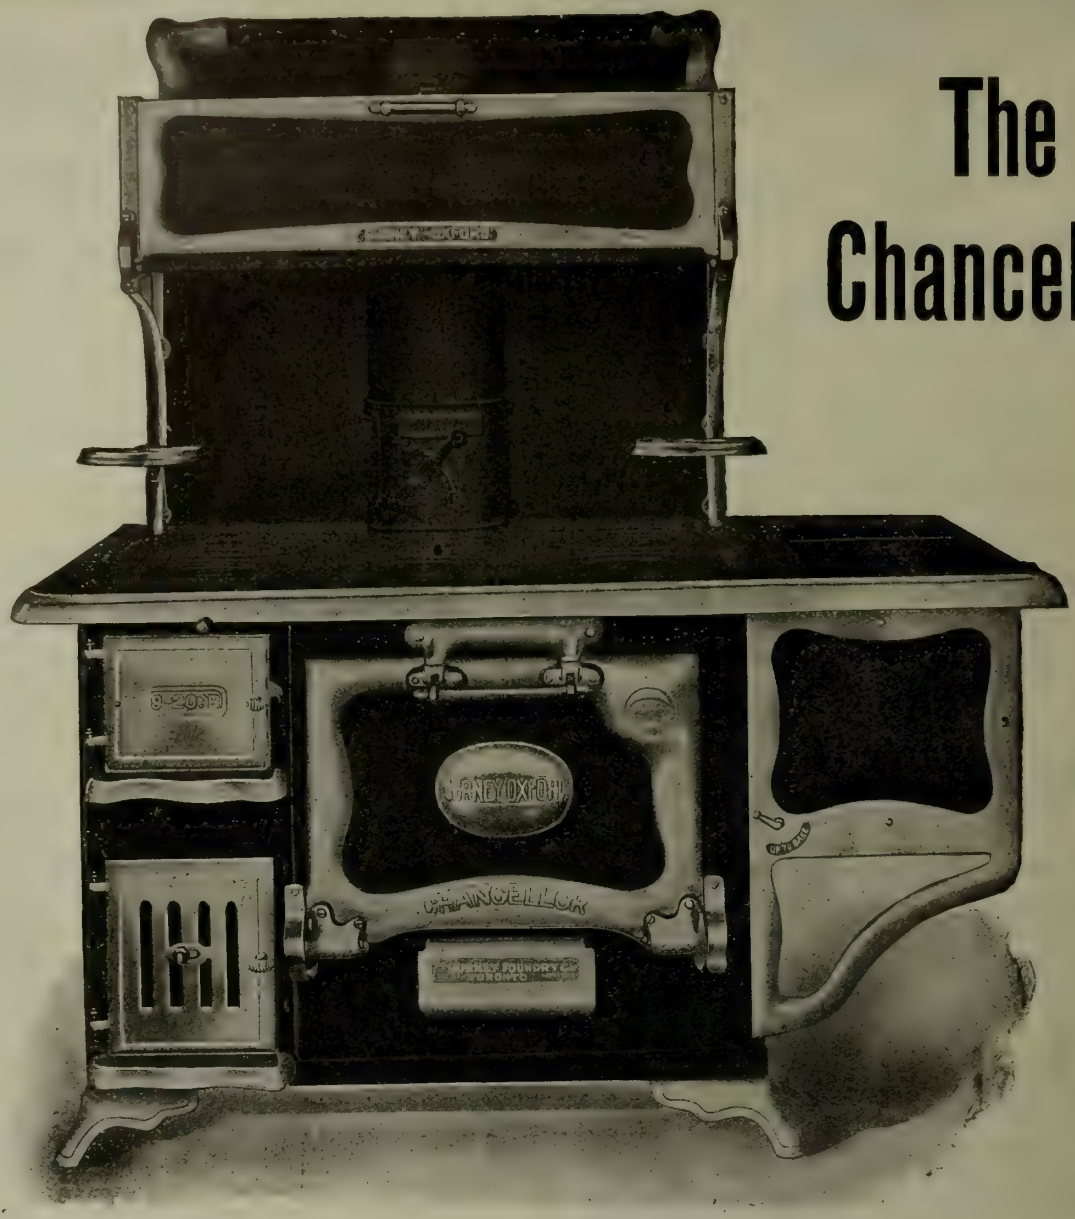
There's a certain profit in MATERIAL for this dozen and—further profit in the ERECTION.

But, consider the effect these will have on the other merchants in your town.
It will create a big demand for artistic interiors—for

METALLIC Ceilings and Walls

—and every square yard erected means profit to you.

"Metallic" Ceilings and Walls are just as essential in the home.



They are FAR SUPERIOR to the ordinary decoration — MORE ARTISTIC, MORE ECONOMICAL and PERFECTLY SANITARY.

"Metallic" is the cleanest and brightest interior decoration on the market and is ABSOLUTELY FIREPROOF.

Write to-day for illustrated design catalogue—it means dollars and cents to you. Send measurements of store or home for complete estimate of cost.

Manufacturers of "Eastlake" Steel Shingles and "Metallic Building Materials.

The Metallic Roofing Co Limited
TORONTO & WINNIPEG

The Chancellor

THIS is our newest steel range design and always pleases the critical buyer.

The "Chancellor" is being prominently featured in our big national advertising campaign. Note these special features.

The Chancellor is fitted with our New Oxford Reversible Grate for hard coal with large air space, guaranteeing the most heat for coal burned, or for western requirements equipped with our celebrated Duplex grate for soft coal. Remember these grates are interchangeable. Special wood grate when required.

The oven flue construction means perfect baking results. The divided strip on top ensures an even fire travel over front as well as back of oven. Moreover, this supports the top so it can't possibly sag in the centre, where greatest weight is apt to come. The firebox will accommodate a stick of wood 24 inches long. The change of linings can be made in a few minutes. The linings and grate may be removed independently of each other.

The bottom of the smoke flues is cast iron—free from the attacks of creosote. Feet on base; no scorched floors.

The oven door is strongly constructed and will support the heaviest roast. Expanded metal asbestos protection to oven top, and flue wall won't wear out. The warming closet has a drop door—when down will act as a shelf to rest dishes on. The body of the range and the warming closet of Wellsville blued steel are easily kept clean.

The broiler top is a good feature—a slight turn of a crank and the front top section is lifted at an angle suitable for broiling and carries all odors, when broiling, up the flue. Large reservoir with embossed sides. Plain nickeling, easily cleaned. The Chancellor is made with 16, 18 and 20 inch ovens, and with four or six holes.

The Gurney Foundry Co., Limited

TORONTO

MONTREAL HAMILTON WINNIPEG CALGARY VANCOUVER

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

How We Are Specialists

Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

"Our Plan"

We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.

We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.

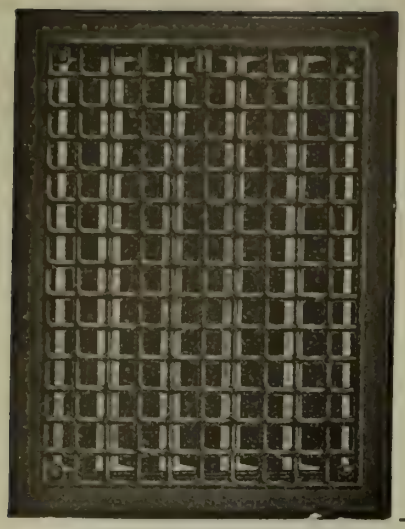
A Self-Selling Range

is the range most worthy of your attention. And that is just why you should be handling "Monarch Diamond" Planished Steel Ranges. Their good points are so numerous, and so plain to be seen that little or no argument is required to make sales.

MONARCH DIAMOND

HIGH GRADE THE DIAMOND LINE RIGHT PRICE



Planished Steel Ranges

burn any kind of fuel. They have large, roomy ovens that cannot warp or be in any way affected when in use by cold air currents along the floor or elsewhere. The BODY is THREE-PLY—two layers of heavy steel between which is a layer of asbestos. The FIRE-BOX is splendidly proportioned and is fitted with easily-removable duplex grate bars. The Front Key Plate is hinged, allowing access to fire for broiling, etc. Reservoir holds three pails of water, is made of heavy planished steel retinned inside. Fire Door is extra large; takes in rough wood; it is made double, outside nickel which does not tarnish.

No matter what line you have been handling it will pay you to look into the "Monarch Diamond" proposition.

Make Good Profits Carrying Our STEEL SIDINGS

There is a good margin of profit for you in handling PRESTON Steel Siding. That is a good reason why you should not only carry it, but give it a push.

It is an easy line to sell, because it has so many strong selling points. For one thing it is damp-proof. This will be appreciated by those who desire a dry house. It is fire-proof and practically lightning-proof, which appeals to those who want safety and a low insurance rate.

Large range of handsome stone and brick patterns suitable for many different styles of buildings.

Write for all the selling points, and our interesting proposition. We've a lot to tell you that it will benefit you to hear.

WHEN buying bookcases insist on having the best in the market—"Macey Sectional Bookcases." Carried in stock by all up-to-date furniture dealers. Illustrated booklet sent free on request. Canada Furniture Manufacturers, Ltd. General offices, Woodstock, Ont. (tf)

WHY?

BECAUSE

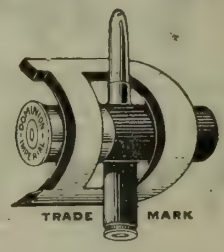
THEY have been adopted by roofers and contractors as an article of unique merit that effects a two-thirds saving in labor.

THEY are pressed from one solid piece of drawn wire, with heads carefully rounded and planished, so as to afford a solid compact without injuring the frailest roof covering.

THEY make a much superior watertight finished roof, and will outwear any other roof fastener.

THEY are indestructible and particularly adapted to our climate, where sleet, snow and frost have demonstrated the unsuitability of other makes.

THEY have received the approval of the most conservative purchasers and are stocked by leading wholesale and retail hardware dealers.



THEY are in a class by themselves, so why not protect your customers' interests by starting now? It's never too late.

THEY sell themselves, after being properly introduced, with their unique features.

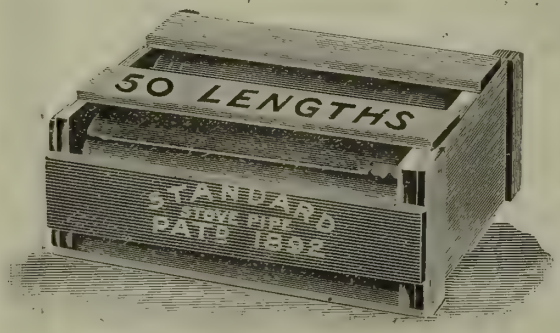
UNITED STATES STEEL PRODUCTS EXPORT CO., MONTREAL

Dominion Ammunition

Many dealers, taking advantage of the quality, price, neat packing and advertising, have switched their entire trade to Dominion.

This means comparatively little money tied up in stock, a quick turn-over on the most profitable brand and new bright goods always on hand.

Sportsmen are pleased in the improvement in their shooting and the money they save, and so purchase more freely.



Every month more of your customers insist on having Canadian cartridges.

Why One Merchant Figures Profits on His Sales

Henry Johnson, Jr., Gives His Opinions on the Much-Talked-of Method — To Base Gain on Cost and Expenses on Sales Makes Profits Look Large and Cost of Doing Business Small, he Says—This Dual Method of Figuring Fools the Merchant, he Maintains.

By Henry Johnson, Jr.

A firm in Alberta asks me why I figure cost of doing business and profits on the sales instead of on the cost? There are a number of excellent reasons, and I shall try to indicate some of them.

1. The fundamental thing in business is that we "know where we are at." If we figure profit on cost and expense on sales, we stand as the man with one foot in a boat and the other on the pier, and we are very liable to be "spilled in the drink." All of us figure our expenses on our sales, do we not? At the end of any year, when you have figured things up, if you are asked what your expenses were, you would arrive at your conclusion something like this:

"I did a forty-thousand-dollar business, and my expenses, all told, were $14,800—twelve per cent!" You might be able to report that you had made some money—and you might not. If you could not so report, the chances are that your trouble was the dual standard of figuring. If you could report net gain, that might be an indication of good fortune—showing you had succeeded, in spite of your straddle; but more likely it would be because you figured rightly.

Makes the Gain Look Big.

To figure profit on the cost is to fool ourselves by making our gain look big, while to figure expense on sales is to make expense look small. Let us take an example. Let us suppose your expense is actually 12 per cent.—which is moderate enough for any retail merchant—and let us say you have done a $10,000 business. Let us say you have added 25 per cent. to cost. Surely it looks as if you should realize 13 per cent. net gain. But do you? In order to get $10,000 by adding 25 per cent. to cost, your goods must have cost you $8,000, because 25 per cent. of $8,000 is $2,000, making the total of $10,000. All right. Twelve per cent. of $10,000 is $1,200. If you take $1,200 from $2,000 you will have $800 left—not $1,300, as you might have expected. It makes quite a difference, you see.

But let us suppose a case not so fortunate. Let us imagine that you, like so many other retailers really had not kept very accurate account, but had allowed things to go along rather blindly, hoping that 12 per cent. would cover your expenses. And let us further suppose that your expense was actually 16 2-3 per cent. And let us still further suppose that you thought you would "content yourself" with a 20 per cent. margin, and so had added only 20 per cent. to cost. How would you then come out? Let us see. Twenty per cent. of $8,000 is one-fifth of $8,000, or $1,600, showing total sales of $9,600; 16 2-3 per cent. of $9,600 is one-sixth of $9,600, or $1,600—leaving you with $8,000, and **without one cent of profit.** If this seems far-fetched, let me assure you that this is just what is happening in dozens of grocery stores throughout the country, and the owners thereof are wondering where the loose screw is located.

How One Can be Easily Fooled.

2. You often hear men, on both sides of the counter, unfortunately, make the statement that a certain article makes 100 per cent., or 110 per cent. profit; and they think that surely they are "safe" with such figures. Let us see. A certain article costs 6 cents, and sells for 25 cents—that is surely pretty good, as it looks like 425 per cent. profit. But 12 per cent. on 25 cents is 3 cents, leaving a net margin of 16 cents, which is the money you actually get; whereas 12 per cent. on 6 cents would only be .72 cent, and you should show, according to your way of figuring, 18.18 cents net profit. Such figures lead one sadly astray, because you are **NOT** doing business on this line of goods for .72-cent, but for 3 cents—which is "some different." This is an extreme case, as you well know, but it will indicate to you how badly you would get fooled on any item on which the gross margin was less—as most gross margins are in the grocery business. I have before me an item from a trade journal, wherein an example is made of a vinegar which costs 17 cents and sells for 30 cents. The margin is stated to be 76½ per cent—figuring on cost, again. Twelve per cent. on 17 cents is 2.04 cents; but 12 per cent. on 30 cents is 3.60 cents; and it is 12 per cent. **on the selling price** with which you have to deal.

Some time ago I saw a circular which guaranteed to "save 200 per cent. of your ice" through a certain refrigerating device. My question was, "Does that device **make ice?** If not, how can you make such a statement? You cannot **save** out of a given quantity of ice **more than the total.**" I found that out of 100 pounds of ice, this device saved 66 2-3 pounds, so the saving was actually 66 2-3 per cent.

The Risk That is Run.

In merchandising the total is the amount for which the goods are sold. The total of anything is 100 per cent. of that thing. Therefore, 100 per cent. of anything you handle is **all of it.** When you sell a dollar's worth of goods, a certain proportion of that dollar—the selling price—is gross profit; of that gross profit a certain proportion is expense; and the remainder is net profit. The only "safe and sane" method is to figure **both expense and profit** from the **same end of the problem.** To do otherwise is to fool yourself and run the risk of going to the bad.

By my method—which is the method of every wholesale dealer and every big merchant from Marshall Field downward—you can know what you are doing; and you cannot know by any other method. And by this plan I find that the article costing 6 cents and selling for 25 cents, pays a gross margin of 64 per cent.; the other, costing 17 cents and selling for 30 cents, pays a gross margin of 43 1-3 per cent. You can see how much less likely I am to fool myself on these conservative figures than is the man who works his profits on cost.

* * *

You may feel that this knowledge is of little use to you since you "have to handle" a good many things as you are handling them now, whether there is any margin in them or not. But do you?

What the Salesman Says.

If your expense of doing business is 16 2-3 per cent.—and that is honestly and truly the expense-ratio of unnumbered grocers who are not altogether aware of it—and a salesman offers you an article at $1.50 per dozen which is to be sold at 15c. a package, what will happen? He says that this item pays you 20 per cent. profit, which means that you sell for $1.80 per dozen. If you figure the old fashioned way, you will listen to his story, stock this article and push it—because "it pays you such a nice margin over your expenses."

If you figure my way, you may feel compelled to stock the article, but you will hide it as much as possible and push the sale of something on which you really do get 20 per cent., or better. For, on this basis of cost, this article pays you exactly 16 2-3 per cent., which equals your expense, and leaves you nothing over—and if enough of you tell the salesman this fact, you will make an impression after a while.

An article which sells for 15 cents cannot cost you more than $1.44 per dozen, laid down in your store, if it is to pay you 20 per cent. And, as a matter of fact, such an article should pay you 25 per cent., so should cost not to exceed $1.35 laid down. Then it would pay you to push it, and such an article as I referred to would have been a bet-

ter seller all along had this policy been adopted or been forced on the makers by the retailers.

They Demanded 25 Per Cent.

It is such careful study that results in the demand from the retailers for better margins. A well-known manufacturer entered St. Paul and Minneapolis sometime ago, where the grocers are well organized. He had to make his proposition to the president of the Retail Grocers' Association. And he was puzzled by the insistent demand that "we must have 25 per cent. on the selling price before we wi'l push your goods." But the deal was made on that basis, through the accurate knowledge of that progressive band of retail grocers. Truly organization "helps some!"

Hardware Merchant's October Selling Campaign

Merchants Can Inspire a Good Buying Feeling by Dispalying Plenty of Confidence in Trade Prospects—Enthusiasm in the Selling of Stoves—Value the Great Consideration—The Handling of Cutlery—Suggestive Windows Create a Demand —The Sale of Hunting Specialties.

Merchants should show an intensely aggressive movement this coming month in order to secure the best possible trade. Show goods confidently. The man who displays his lines in a half hearted sort of way creates a feeling in the minds of his customers that is not conducive to the best interests of the store. First impressions always hold very strongly and if the community get the idea that the merchant is very confident as to coming trade, and boldly shows this confidence by carrying a good line of goods and displaying them prominently, they will feel heartened themselves and will buy freely.

There is a good feeling throughout the country generally. Farmers are well satisfied with their harvests, and large industries are working at full pressure. Money is circulating freely while the banks, although they are inclined to be somewhat on the close side are not quite so rigid in demanding gilt edge securities. The merchant, by giving his store the appearance of "good times" will stimulate this feeling of assurance and guide the buying tendency into channels which will be to his benefit.

The Sale of Stoves.

Stoves should be pushed very hard this month. Merchants are prone to neglect this important staple of hardware. Stoves should not be allowed to sell themselves. If the customer's interest is excited by the merits of a stove; if the merchant takes the trouble to demonstate the value of its design; and goes into full details why this kind should be better than the other kinds on the market the sale is much more readily put through. Simply to say to the customer "this stove will cost you so much," and then to remain in dead silence while the customer peers around trying to find out if this stove is the one he or she really wants, and draws mental comparisons between this particular stove and others that have been seen previously, a feeling of confusion and lack of interest is produced which probably in the end deters the would be buyer from purchasing. The merchant kindles no enthusiasm. and the sale is lost. On the other hand if the merchant proceeds to throw open the doors, turn on the dampers, and get lost in admiration of his own article then the customer becomes enthusiastic likewise and the sale is probably made.

To work up a good stove trade it is necessary to commence as early as possible in the fall. Directly the first cold snap comes along people make up their minds to buy a stove, and they are not inclined to wait a merchant's pleasure before they get one. A full line of stoves should be shown at once and placed in a prominent position. and let their polish and general appearance demonstrate that the merchant places great store in them, and is proud of them as he is of any other article in his business.

The Value of Quality.

There is one thing in the sale of stoves as in every other article of hardware, and that is quality. Carry an article on which you can base your whole reputation as a business man. A customer only buys a cheap article once—that is an article on which much wear and tear depends. The buyer after being disappointed over an article does not remember that he in a measure is to blame for having this inferior quality one, because if he had not acquiesced the sale would not have transpired. He only thinks that owing to the blandishments of the merchant he was deluded into buying an inferior quality article which had turned out to be most unsatisfactory. The result is the merchant gets a bad name which not only deprives the store of a customer, but probably this disgruntled buyer will talk to other people and thus spread a report around which will act most disastrously against the merchant. Quality in goods has been described as the supreme magnet. One authority in writing on the question says that the reason that induces the public to buy at a certain store in preference to others is "value." Excellent salesmanship, and all the wiles and tempting inducements of the merchant give way to this consideration of value. Value will hold trade when all other inducements are absent. A notoriety for "fine-cut" prices will attract, but if, as often happens, the quality is also "fine-cut", there will be a steady leakage in the patronage of the establishment. To build up on solid value may be slower work, but rears an edifice of a more endurable character. No tradesman in his senses will sell a bad thing, hoping thereby to make another sale. There could be no swifter road to ruin. Personal recommendation is the most valuable kind of advertising. If we recommend our own goods, our recommendation is always liberally discounted, but when they are advocated by a disinterested authority, the recommendation carries its full weight. To give value every time leads directly to this highly prized kind of advertisement, and nothing should be done to vitiate the active operation of the principle. This is the supreme magnet. It alone has a firm holding power, and there are many firms to-day who can attract, but who fail to hold what they have attracted. Here it is where the personality of the private trader can spell victory for him.

The Stock of Cutlery.

With the present-giving season rapidly approaching merchants should see that their stock of cutlery is in the best of shape. Probably no line of hardware is more acceptable as a present than some article of cutlery. Cutlery has for years been considered as a staple article of hardware and when the public think of buying cutlery they think of the hardware store just the same as any one who wants to purchase a ring thinks of the jewelery store. It is well in selling cutlery for the merchant to know all about the points of the article in question. For instance, in the case of a carving knife a customer may be shown several patterns. Two of these may look exactly alike and yet one may be very much dearer than the other. If the probable purchaser can be shown why one is dearer than the other the probability is that the higher priced article will be purchased. Take a well made Sheffield carver and one of inferior make and compare them carefully as to finish and edge and temper and it will be very easy to ascertain why the one commands a high-price. In cutlery it is a mistake to sell a poor article just because it is cheap. Keep the best and hold the trade. It is a very great satisfaction to sell a good line of cutlery and to know that it is as nearly perfect as the most skilled hands can make. Cutlery makes a very fine window display and should be employed much more extensively than it is. Carvers in cases, table cutlery, and all the other lines including the ever popular pocket knife, make a window that is attractive to young and old alike. The articles lend themselves to display and it does not require a very great amount of ingenuity to be able to design a window which will not only be artistic but will be a business bringer.

Creating a Demand.

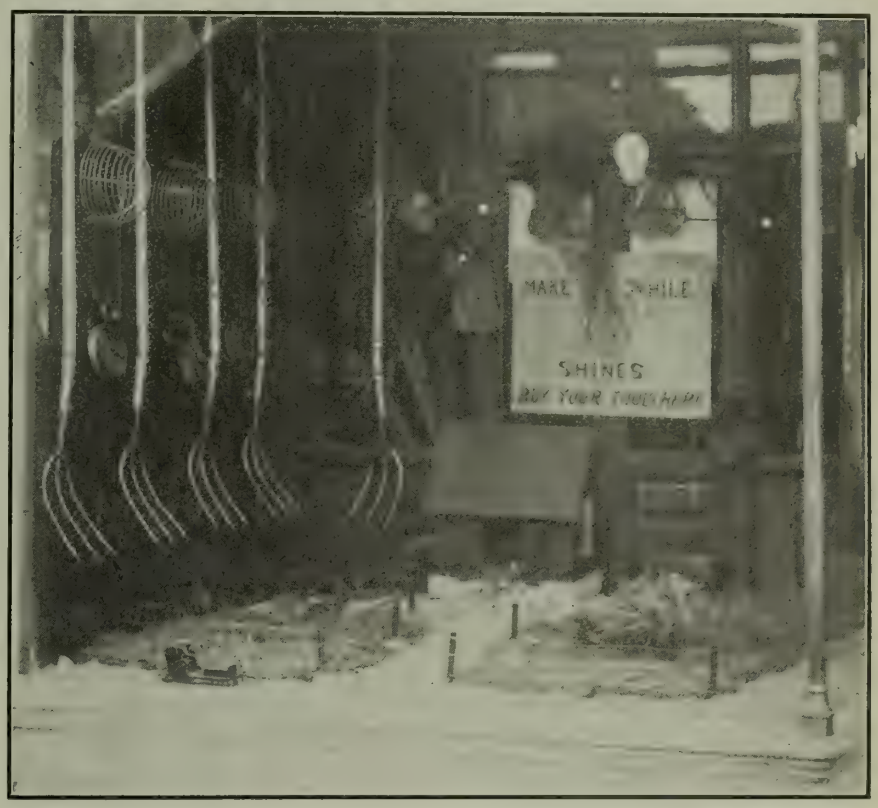
By this time the merchant should have all his fall and early winter goods in,

priced, and ready to be displayed. The cold nights are making the farmer think of the comfort of his stock during the winter. Horse blankets, halters, barn requisites and lanterns will be wanted. Probably the barns will require fixing up to be rendered habitable for the winter. Nails and putty, not to say paint, will be necessary. The merchant by displaying these lines and bringing them prominently before the farmers can make the latter think of their needs in this direction, whereas but for this the latter would be inclined to forget all about it until probably the snow arrived and then it would be too late to do any fixing up. We are all of us prone to procrastinate and unless we are continually reminded that we need such and such a thing we are apt to put it on one side and turn to other matters which may be of less importance but seem at the present moment much more essential. It is astonishing how a merchant by a suggestive window display can create a demand. At least if he does not quite create a demand he makes up a buyer's mind for him. He quickens his memory. He produces a desire. He acts as a reminder and the whole culminates into a sale.

A man who says to himself "there is a good feeling all the way around, crops were never better, people have been economizing all year, there is sure to be a fine demand, all I have to do is to sit down and the customers will roll in and buy my goods," will wake up from this dream to find that things are totally different. No matter how good conditions may be no matter how great may be the quality of a merchant's lines, his stock will not sell itself. He must get out and hustle after business. He must display his goods in front of the customer. He must, in fact, take buyers by the neck and bring them into the store and say, "'This is the article you want. There is none better on the market. Buy it and you will never regret." The aggressive salesman in a poor buying locality will do more business than an unaggressive salesman in a very rich one.

Hunting Specialties.

A merchant should have had by now, at least one display of hunting specialties. From now on shooting will be very common. In sporting goods, as in every other line, the dealer should keep his stock where the goods may be readily seen. One complaint in regard to sporting goods is that to run a series of good sporting windows it is necessary to carry a heavy stock. This is not quite correct because it is astonishing how by rearrangement goods may be made to seem new stock whereas they might be quite the reverse. By rearrangement at any rate monotony can be avoided and public interest in the stock maintained. In addition to the ordinary articles generally used such as guns, ammunition, cartridge belts, canvas coats, revolvers, shell extractors, compasses, range finders, watches, silencers, decoys and other accessories, which are very useful on hunting trips, should be carried. If some of these articles do not sell very readily that is no reason why small stock of them should not be kept. They serve for talking purposes and so render material aid. To get a prospective customer interested in a certain article is often the first step toward making a substantial sale. The articles should be marked at reasonable figures, so that any one who buys a gun may be induced to purchase a compass or a watch also, and so make his equipment reasonably complete. When a man becomes the owner of a relatively expensive article he is usually ready, if approached in the right way, to spend a little more—if it be a gun—on a case, sight, or cleaning rod. Another advantage in selling minor articles, at a relatively low price, is that it creates a demand, which in turn reflects itself in the entire business. The greater the number of these reflex actions, and the more any sport is taken up in a thorougghly systematic way, the better for the sporting goods business as a whole. When a man is out hunting in some remote section of the country he should go well provided to meet those contingencies which are always happening when least expected. The thing required for the emergency may be small in itself, but under the circumstances it is important, and should be handy. It cannot be purchased in the woods, and to get it from any distance would consume precious time of which there is not over much to spare.



It is by looking after all these incidents that a merchant makes his department go.

HAYING TOOL DISPLAY.

S. L. Adolph, Listowel, Ont., forwards a photo of a "haying time" window display arranged for him recently by Scott Binning, a clerk in his store who has shown considerable talent in arranging displays which have helped the sale of goods.

As will be seen by the illustration the window was arranged with a barn in the rear and two hayfields in the foreground, while along the front was a roadway along which a miniature auto was running. In the upper portion of the window hay forks, gloves, etc., were arranged and a novel show card urged customers to "make hay while the sun shines."

An out of the ordinary display of this character helps to advertise the store and is a good business bringer.

"Haying Time Display in a Listowel, Ontario, Window.

LETTER BOX.

Crematory Closets.—C. Richardson & Son., Harrow, Ont., ask for the name of a manufacturer of crematory closets. Also manufacturers of hot water systems.

There is a firm in Hamilton making a closet with a furnace attachment for burning the solids, but the editor of Hardware and Metal has had personal experience with one in a summer cottage and cannot recommend them, because of the strong odor when burning. The Toronto Furnace & Crematory Co., Toronto, now manufacture only dry earth closets for summer houses, Selkirk & Co., Simcoe, also manufacture a dry earth closet.

The Taylor-Forbes Co., Guelph; Gurney Foundry Co., Toronto, and Pease Foundry Co., Toronto, manufacture hot water heating systems.—Editor.

PUBLISHED EVERY SATURDAY.

A TAX ON INDUSTRY.

The absurdity of our present system of taxation was illustrated by a remark overheard by the editor of Hardware and Metal this week.

A Lindsay hardwareman solicited an order for paint from a local manufacturer to be used in painting his tannery.

"Not a dollar will I spend on paint until I am given assurance that my assessment will not be increased as a result of the improvement. There should be no tax on industry," replied the manufacturer, who is a man of ideas and determination.

And while the manufacturer undoubtedly took an extreme view of the matter there can be no doubt of the logic of his position.

A tax on improvements retards progress and hardwaremen, whose business depends upon the progress and development of the community in which they are located, should take the leadership in the advocacy of a revision of the laws governing taxation.

Ontario should follow Alberta and British Columbia in making it possible for municipalities to abolish taxation upon improvements. There should be local option in taxation.

THE DEALER'S UNSELFISHNESS.

What the retail hardware trade needs probably more than anything else in each town or city and in each district in these centres are a few missionaries to promote a good feeling among the different merchants.

Here is a story to illustrate: Not long ago in a large Canadian city a dealer decided to branch out and erect a second store in another part of the municipality.

Having got settled in his new establishment he set out from the very first to gain the good-will of all his competitors. Some readily reciprocated his friendship, but there was one particular competitor who would not make the slightest advance towards familiarity.

The newcomer brought about the Wednesday half-holiday in the new section by calling on his neighbors, making himself a "good fellow," and by pointing out the reasonableness of having a rest occasionally.

One competitor held aloof; he remained firm and would not consent to the innovation, although several letters were addressed to him, asking for his co-operation.

It was always his method to charge a competitor the same price for an article as he would the consumer. His rigid determination made his influence felt all over the district. If another firm ran short of an article he never allowed the customary rebate in the trade and his competitors were disposed to act likewise.

When the new arrival—who had had some good experience in an association and in his old community—came on the scene, he began giving the rebate at every opportunity, just to show his desire to work harmoniously among his competitors.

Once or twice he had occasion to send one of his employes to the store of the man who was not disposed to reciprocate his advances. He was charged the full retail price every time.

Later his competitor sent to him for some articles and each time he gave the rebate. This had the desired effect. The other changed his policy and began working harmoniously with all in the district. He gave the friendly rebates and before long decided to close on Wednesday afternoon during the summer months. He is now quite friendly to his competitors, who were somewhat surprised to see the change—and it was all brought about by the little acts of kindness of the newcomer. Had he been disposed to treat this merchant the way he was treated by him, the congenial relations among all would still be a dream.

This is a lesson from real trade life that might well be followed by others.

A good system may sometimes be discovered by mistake. A merchant found that a bill for $20 had been sent one of his delinquents who owed him $10. This man lived some distance in the country and was always hard to reach. The unintentional error brought him to the store to protest, and before he left he had paid the merchant in full. Then the "error" plan was worked successfully in other cases.

KEEP THE STOVES BRIGHT.

With the first touches of autumn chill, people are taking a sudden interest in stoves. The purchase of a winter heater, or of a coal and wood range to replace the gas or oil stove, which has done duty during the summer, is becoming a very timely subject with many buyers.

Coincidently, stove displays are appearing in the windows, and stove talks are commencing to occupy the hardwareman's advertising space.

Just one little word of advice with respect to handling stoves will prove timely. It is: Keep them bright.

It is very easy, even in the neatest and cleanest and best kept hardware store, for dust to collect upon the stoves. Or, a bit of moisture may cause a rust spot to form, or a smear of paint or oil or dirt may tarnish the bright surface.

A few specks of dust or a rust spot may seem little things, but the sale of a stove is a big thing, and in the making up of big things, it is the little things that count. The purchaser may know what constitutes a good stove and may take it despite these purely superficial blemishes. If so, the fact is a tribute to the hardwareman's salesmanship. Nevertheless first appearances count for much; and it is good salesmanship to render first appearances as favorable as possible.

So, while you are thinking of it, train that young clerk, who is standing with his hands in his pockets gazing out the window at passers-by to take his little duster, and go over every one of those stoves, ranges and heaters, that you have on display. What's more, see that he does it regularly.

It means more than you perhaps think, not only to your stove sales, but also to the clerk.

LOCAL PRICES WERE BEST.

A short time since a farmer in Manitoba ordered a stove through one of the catalogue houses in Winnipeg and received his merchandise in good condition. He was exceedingly proud of his purchase for a time. But one day when he was in a neighboring town he saw a similar stove to his own displayed in a dealer's window, and he made inquiries as to its cost delivered to him at his home six miles away. The dealer told him he would be glad to deliver it and fit the connections complete for a price that figured a little over 4 per cent. below the price he had paid for the stove alone f.o.b. in his own town.

That consumer learned a lesson concering buying by catalogue alone that he is not likely to forget soon.

PREDICTED ADVANCE IN PAINT PRICES.

As we announced in an editorial last week, paint manufacturers have decided to advance the price of paints and allied lines generally. This action can hardly come as a surprise to the trade, who have been warned by us repeatedly that if linseed oil and other raw products kept on increasing at the rate they were doing no other measure could obtain.

For some time now conferences have been held of the various manufacturers, and although there has been a mutual reluctance to advance prices, especially in view that there was no desire to interfere with the movement of the fall demand, it was felt that if quality was to be maintained prices must go higher. For instance, linseed oil now costs on an average from 40c to 45c per gallon higher than a year ago—flaxseed, from which linseed oil is crushed, being $1.20 per bushel higher—while turpentine is from 20c to 25c per gallon higher.

Looking to the future, it is impossible to hazard any opinion as to when the tension will be relieved. According to reports, the U. S. Government flax crop is estimated to be less than half of normal, and although the Canadian flax crop is reported to be larger than usual, it can be understood that the deficiency across the border will make heavy inroads upon the domestic crop, so that little relief is to be expected from the larger output in this country. Until the South American crop is harvested, it looks as if Canada will have to bear the demand of the world for flaxseed, so that the outlook is not particularly rosy so far as any immediate relief in the linseed oil situation is concerned.

Once again we would strongly advise retail merchants to have no hesitation in advancing their retail price, sufficient not only to cover the advance to them, but to allow a profit as well, and, moreover, the new prices should apply not only to new stock, but to old stock, for certainly the merchant is justified in exacting this, as to replace his goods he will have to pay the higher price. From all accounts the advance in price is general, not only in Canada, but in the States. It is a step that could not be avoided, and, after all, as we have often said, consumers of paint in the past cannot grumble as to prices they have had to pay, for paint undoubtedly has been very much on the cheap side.

The likelihood of an advance was seen long ago, as can be judged from the quotations given below, taken from Hardware and Metal during the past six months, but the move was delayed till now to meet the wishes of hardwaremen in various sections of the country. Hardwaremen who took the hint and bought or booked early have undoubtedly reaped a reward.

Tips to the Trade.

"Buyers who may be looking for a reduction in price are not likely to have their expectations realized as with seed in demand all over the world, a marked change in price cannot be looked for until relief comes from the harvesting of another crop next fall."—Hardware and Metal, March 5.

"The prediction of dollar oil comes nearer realization just at present than at any time since the commencement of the year. * * * Oil has been advancing since last May. In 1909 Canada produced 2,213,000 bushels of flaxseed, valued at $2,761,000. A decade ago only 172,222 bushels was produced. * * Both white and red lead during the year, have advanced 25c., also advancing the price of prepared paints 10 cents per gallon. * * * Indications are for higher paint prices in the near future, when the outdoor painting begins, and this in spite of the thr(atened advent of sayo bean oil into Canada." (March 26).

"This week a new and advanced price list on colors and paints in oil has been issued, the new prices going into force yesterday (April 1), and being roughly, two cents a pound higher than the old figures. The rapidly advancing quotations on linseed oil are primarily responsible for these higher prices. This advance is but one indication of the strengthening of paint prices generally, and particularly in so far as as goods which mix with oil are concerned. It is probable that an advance will be made on putty next, followed by higher quotations on prepared paint lines. * * * The prediction of dollar oil made by paint jobbers two months ago seems likely to be realized, as present quotations are understood to be slated for further advances, and booking of futures is being discouraged." (April 2).

"As predicted by Hardware and Metal, a second advance has been made by manufacturers of ready-mixed paints the higher prices averaging ten cents and taking effect May 1. * * * There seems to be no likelihood of lower prices on the principal articles used in paint manufacture before the end of the present paint season and for manufacturers to continue to sell at prices which would not yield them a profit is more than could be expected of sensible business men. Far better advance prices, even though it means reduced sales than tamper with the quality of the article. The advance in prices enhances the value of paint materials now in retailer's stocks and it is to be hoped that retailers will be gifted with as keen business sense as the manufacturers, and advance prices in proportion to the increase in cost." (April 23).

"Seed prices at Duluth are higher than for 20 years past. No relief seems in sight for almost three months yet." (April 30.)

"Oil is on the upward movement again, and in the opinion of some will go even higher than it was a fortnight ago." (May 21.)

"The price of flaxseed from the East Indies, and also at Chicago, advanced slightly, which enabled the crushers of flaxseed in Canada to advance their prices somewhat. Stocks in the hands of the jobbers are light." (July 2).

"Hardwaremen were asked to book up linseed oil early in the year, but uncertainty as to the future held back a number of buyers. Those who did book made a wise move. Flax is now selling at around $2.50 at Duluth and Chicago, almost double last summer's price, and it looks as if higher quotations will rule the coming season. Argentine seed will not come on the market until after the turn of the year." (Aug. 6).

"There is a considerable shortage in the world's supply of flaxseed, hence a strong tendency to keep up high prices." (Aug. 27).

"The high linseed oil quotations are due primarily to the shortage all over the world. While crops may not be a dead failure, the most optimistically conservative estimate yet given of the flaxseed crop in the United States places it at two-thirds that of last year. Argentine was short; so was India; Russian and Baltic seed was about the average, but that crop only slightly affects the Canadian, British and American trade, because it is consumed in Central Europe. Reports from Western Canada place the crop at about the same figure as last year; for while the acreage has been doubled, the drouth in early summer partially, and in some cases almost completely, destroyed the flaxseed crop. There is sure to be a bid for Canadian flaxseed from outside, and just as sure will this tend to higher prices." (Sept. 3).

"The advance in paints bears out the advice that we have for some time been giving merchants. In our talks to dealers we warned them that the cost of paint would be raised, if linseed oil maintained its bullishness, and that the merchant who ordered his fall stock early would reap an advantage." (Sept. 17).

Must Advance Retail Prices.

The hardwareman who has not followed our market reports carefully has been a loser as a result of his negligence, and the merchant who fails to take our advice to increase the sale price of his mixed paints will have cause to regret it.

Hardware and Metal has made extensive enquiries and has been unable to find one retailer whose business has suffered as a result of the advance in paint prices made last spring. On the contrary, there has been a larger trade in ready-mixed paints than ever before, one reason for this being that master painters have found it cheaper to buy ready-mixed paints than to purchase lead, oil, colors, etc., and mix the materials themselves.

To secure higher prices for mixed paints merely requires nerve and salesmanship—nerve to make the step and salesmanship sufficient to point out the reasons for the advance and the advantages of paying a fair price for goods of high quality in preference to low prices for adulterated goods.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Linseed Oil.—Advanced 6c.
Turpentine.—2c to 3c advance.
White Lead.—25c per 100 lb. advance.
Prepared Paints.—15c to 25c higher.

Toronto.

Linseed Oil—Up 5c.
Turpentine—Advanced 3c.
Putty—Up 10c.
Prepared Paints.—About 20c gallon higher.
Colors in Oil.—2c a pound higher.
Varnishes—Up about 15c.
White Lead—15c to 25c advance.
Spelter—Advancing.
Pig Iron—Canadian foundry down 50c a ton.

MONTREAL.

Sept. 23.—Prices are unchanged this week under a fair buying movement. Users are taking metal steadily, wanting for immediate use nearly every pound they buy. There is a tendency for country buyers who use a good quantity of metal to increase their ordering in view of the approaching end of the navigation season Jobbers and first hands seem very satisfied with the amount of trade being done, and with the prospects for the fall months Prices have been kept as steady as the primary markets have allowed, and there has been no extreme desire to follow the daily fluctuation in London or New York The higher prices obtaining in tin have not checked the demand, so far as immediate wants are concerned, although it has naturally tended to keep back any great booking ahead

The corner in tin in London has received several checks, and while the bull party still remain in control, the market has been steadily dropping. Even now the price is away ahead of the figures obtaining in July. There is considerable speculation as to what will happen before the Banca sale comes off. There is some doubt as to whether the American consumption has been so heavy as it has been made out to be. Copper has been without any interest, and the jobbing trade has been dull. A drop in English prices caused New York to sag a little. It is reported that a genuine attempt is being made to reduce the output by some of the larger interests. Spelter continues to advance, but lead remains steady. The United States iron and steel market seems to have lost some of the ground gained during the past two weeks. Prices are being shaded to command large orders. Evidently the labor disputes are having a very weakening effect upon the Old Country market. Prices are weak, and Cleveland Warrants have been considerably lower.

Pig Iron—No fresh features are showing in the local pig iron situation. Business seems to be somewhat uneven, but generally there is little dissatisfaction expressed. Orders are coming in steadily for winter requirements. New business is evidently very disappointing in the States, and large orders are met by shaded prices. It is reported that the total volume of business last week in all sections and for all kinds of iron was scarcely 75,000 tons, and nearly all the gain was in the east. Competition in new business for steel is steadily increasing, and concessions are being made on both fabricated and plain material.

Tin—Tin prices locally are unchanged. Although if the drop in London continues there will be a sag. Good jobbing trade is being done at 37c, although for fair-sized orders the price is made under this. In anticipation of prices falling, owing to break on the London corner heavy buyers have been holding off the market. Although prices are considerably lower in London than they were, the bull operators are still in control, although things are expected to happen before the Banca sale. One result of the high prices has been tha. other lines of tin besides Strait Settlement have been bought by those who declined to pay the high prices obtaining in the latter kind.

Copper—Copper is unchanged at 13½c. Trade generally is fairly satisfactory with inquiries showing that steady business is likely for some time to come. The country demand shows the stimulation that is generally felt in the fall. The situation in New York is very much the same. Fluctuation in London caused prices to weaken a little, but only for large orders. Exports are increasing, but there seems little improvement in the domestic consumption. There is an opinion that some of the large producers are reducing their output, but there is no concerted action.

Spelter — Spelter remains unchanged with steady business reported. Some of the larger buyers have been in the market, as prospects indicate higher prices in the future. The English market is advancing to old figures again, while St. Louis reports improvement. Buying in both markets is very good, and supplies are held strongly.

Lead—Lead, both imported and domestic, is unchanged. Trade is about the same, with users buying just as they want the metal. The English market remains very little altered, although the tone is on the weak side.

Scrap—The market is dull with little scrap showing. We quote: Heavy copper wire, 11c; light copper bottoms, 9½c; heavy red brass, 8c; heavy yellow brass 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, $12; machinery cast scrap, No. 1, $16; stove plate, $12.50; malleable, $9: miscellaneous steel, $5.

TORONTO.

Sept. 23.—A somewhat better feeling is abroad and at last the situation appears to be improving. Iron has been moving out on old contracts principally and there has been a dearth of new business. Canadian furnaces are still reaching for orders and this week Hamilton is offering pig iron in car lots 50 cents below last week's quotations. No. 1 grade is $19.50 f.o.b. Hamilton and No. 2, $19 per gross ton.

Spelter is the most active metal just now and copper is showing firmness. Tin is unchanged. Canada plates are slow in delivery and are consequently scarce. Prices, though, have not advanced.

Pig Iron.—The prospect appears to be somewhat brighter despite the fact that Canadian foundry iron is down 50 cts. a ton. Scotch and English irons hold unchanged at last week's figures and the market is fairly firm, especially for Scotch irons. Middlesboro No. 3 is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Jarrow is $20.50 and Glengarnock, $22.50.

Spelter.—This metal is at present most active. The sale of 3,000 sheets of zinc to Argentina gave a great impetus to the market and not only stiffened up prices, but stimulated trading. While spelter can still be had it last week's quotation of $5.75, local houses are asking above that figure up to $6 for small quantities.

Sheets and Plates.—Stocks are lowering and supplies are scarce. Deliveries are yet delayed and buyers are pressing for shipments. This has tended to keep all prices firm, though no advances are yet reported.

Tin.—The market is holding its own and tin while at the drop price of 37c—last week's quotation—is firmer than for some days. Deliveries are more free both to Europe and America and production in the east has also been increased. While supplies are coming in more freely stocks on hand are low.

Copper—Trading is more satisfactory. Sales are good and the market is steadier in regard to prices, though the quotation remains at 13½c. Orders while not calling for large individual quantities are so frequent as to make the total bulk pretty big.

Lead.—This metal keeps on growing in importance. Of late the local market and the lead situation generally have been gathering strength. Last week's figures—$3.80 for imported and $3.75 for domestic—still hold, but the metal is firm at these quotations.

Old Materials.—Nothing untoward is happening in scrap lines. Old iron and steel is bulking up making stocks pretty large. The other metals are changing hands frequently enough to make business worth while. All prices are steady and unchanged. Dealers are paying this week for heavy copper and wire, 11 to 11½c; light copper and bottoms, 9¾c; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

Sept. 23.—An encouraging fall movement is noted, and jobbers express satisfaction with the way business is shaping. Travelers are writing in most optimistically, and the tone all the way round is extremely good.

Fall and early winter lines are going out steadily, and orders are well assorted in character. Lanterns, stable and barn requisites and sleigh bells, are prominent, while delivery is also being taken in snow shovels, boot calks, axes and axe handles. Household requisites are moving out well, bread makers, food choppers being in good request. Guns, ammunition, and other sporting requisites are prominent. Skates and hockey sticks are also moving in a very encouraging manner. Builders' hardware, bolts and nails are showing up well. The Maritime Provinces are improving in buying generally, while the North West is showing distinct improvement. Prices are unchanged, and the general tone of the market is firm.

Seasonable Lines.—Household lines continue to show up prominently, dealers reporting a good consumptive trade. Bread makers, food choppers, potato slicers, knife cleaners, wringers, washing machines and sad irons being prominent. Fall and early winter lines are now moving well, while the booking is extending for sleigh heaters, weather strip, and snow shovels, delivery being taken in some cases. Lumbermen's tools are also showing better strength not only in the booking but in immediate delivery.

Builders' Hardware.—The demand continues steady for locks, lock sets, push plates and other lines. The building season locally is at good strength while dealers report a promising country demand. The market is firm, and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Sporting Goods.—Guns, ammunition, cartridge belts and bags, primers' decoys and other requisites are in good request. Rush sorting up orders show the strength of the consumptive demand. Skates and hockey sticks are also moving well. Booking is commencing for snow shoes, toboggans and sleds.

Bolts and Nuts.—The demand continues very good for bolts and nuts while the local trade in nails has improved, dealers making up their stocks caused by the inroads of the stands for the Eucharistic Congress. The market is firm, and we quote: Discount on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—The demand maintains its strength, especially from the large industrial centres, bar iron and steel being prominent. We quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ¼, $3.25; 1, $3.25; anchors, 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each; and steam gauges, 35c to 80c.

Wire.—Wire is showing good demand, especially in the more seasonable lines. The market is unchanged and we quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80. Galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal. Coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots. Plain wire, bright, annealed and annealed and oiled, $2.35 base. Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Sept. 23.—The good business movement noted last week is progressing and even shows some improvement. Continued fine weather in the country and the favorable report on crops have enlarged the fall trading. The west is doing splendid business, judging by travelers' reports, and in the country sections of Ontario the county fairs are helping the hardware trade and are also benefiting collections.

Demand is mostly for fall goods, though the range of articles moving is great. There are no price changes to report, but the market situation is strong with quotations firm. Stoves are moving out splendidly, and it looks just now as if the great sales record of last year will be broken this season.

Kitchen, housecleaning and general household goods keep moving steadily, and there is a splendid trade passing in builders' hardware in the larger towns. Guns and ammunition are foremost in sporting goods just now, and in fact are prominent in a majority of the orders received by jobbers.

Fall Goods—Splendid trading is passing in a wide variety of seasonable goods. Shelf hardware is perhaps most active. Country hardwaremen report fine sales of farm and stable tools, fittings and supplies; with fence wire moving pretty freely. Horse blankets and lanterns are active and so are forks. Shovels of all kinds are in a class by themselves, every week bringing a demand for some one or other kind. Shipments of snow shovels have already commenced and there is fair inquiry for sidewalk scrapers. Cow ties are going west in larger volume than ever. Weather strips and wire door mats figure in many orders. Axes and lumbermen's supplies are opening fairly well.

Builders' Hardware—Demand keeps up at the record notch. The class of goods moving is variety and somewhat away from standard patterns. The grade wanted is higher than ordinary and some demand hardware of a high quality and exclusive pattern. The market is firm. Builders' tools have eased up somewhat. Nails and screws are in big demand.

Household Goods—A few good calls have been made this week for preserving goods and food choppers. The movement of housecleaning articles is steady and fair. General household goods show up fairly well in orders, though there appears to be a slackening in the call for this class of goods. Table cutlery keeps normal.

Heating and Lighting Goods—Stoves are moving splendidly. Manufacturers say they are having some little difficulty in filling orders promptly, so great is the call for immediate shipment. House lamps are going out increasingly well, and splendid sales of stable lanterns have been made this month.

Heavy Hardware—pipe is still in first place so far as the call is concerned. Bar iron is moving a little better. That is it figures in more orders, though the quantities wanted are still small.

Bolts and nuts are good and fairly active. Structural steel beams are pretty prominent, and some good sales of chain have been made recently.

Sporting Goods—Shot-guns, rifles and ammunition continue to be the most prominent line in sporting goods. A majority of orders call for this class of stock. Hunting outfits and supplies are inquired for. Knives are selling well. Skates and hockey sticks are coming to the front, and orders for sleds and toboggans are already high.

U. S. IRON TRADE.

Cleveland Sept. 22.—The Iron Trade Review says:—Some disquieting rumors, now positively denied, have been circulated regarding low prices on finished steel, and there appears to be considerable uncertainty on account of political activity, but the iron and steel market does not seem to have lost any ground.

Sales of steel bars in fairly large lots have been made on a basis of $1.40, Pittsburg, and the market is firm at that figure. Bar iron is weak. Several contracts for hoops and bands have been renewed at current prices. Further weakness has developed in the market on sheets.

A new low quotation on basic pig iron has been established by a recent sale of valley iron, and $13.50 valley, can be done for prompt delivery. Consumers continue to play a waiting game and the market is not showing much life.

Store lighting is of vital importance in these days of modern improvements. Whether you use gas or electricity, get the best. A gas cluster of inverted lights can now be had at moderate cost for installation and operation that looks like electricity and gives as satisfactory results.

Trust your partner and your clerks implicitly, but never condone positive dishonesty. If you catch a clerk stealing, fire him on the spot. The cash register and a thorough system of checking and accounting will make it hard to be dishonest and easy to be honest. For the rest, have confidence.

News and Methods of Canadian Hardwaremen

A "Made-in-St. John" Display at Dominion Exhibition—Novel Prize Competitions Conducted by Tilbury and Parkhill Stores—Lindsay Stores Making Improvements — Arranging for Retail Hardware Convention—Peterboro and Galt Manufacturers to Co-operate in Making joint Displays.

"MADE IN ST. JOHN" EXHIBIT.

St. John, Sept. 21.—A fire occured on Tuesday of last week in the Vulcan Iron Works, operated by T. McAvity & Sons, but the damage was not great. The fire broke out in the moulding and core rooms and the fireman managed to keep it confined to this section. A large portion of the roof was destroyed and some damage done to the rooms mentioned, which was covered by insurance.

James M. Keefer, corporation solicitor for the city of Port Arthur, Ont., was in the city last week in connection with the establishment by T. McAvity & Sons, of a branch foundry in that city. The town has offered a ten acre site to the local firm and they have the matter under consideration. It is probable that the firm will accept as they claim they must expand and up to the present no favorable site has been found in St. John. They have a large business in the west. Inducements have also been offered to the firm to go to Montreal. An option has been secured in Bordeaux ward in the suburbs of Montreal.

Edward Partington, of Glossop, Eng., pulp and paper manufacturer; Thomas McAvity, of St. John, hardware merchant; George S. Fisher, St. John, roofer; Joseph R. Clarkson, of Lancaster, N. B., pulp manufacturer; Harry W. Schofield, of St. John, accountant, and Augustus H. Hannington of St. John, barister, are applying for incorporation, as the Edward Partington Pulp & Paper Co., with a capital of $950,000.

Roland H. Connick, of St. Stephen, tinsmith, has assigned to Melbourne Macmonagle, for the benefit of his creditors. A meeting has been called for Sept. 22.

The Dominion Exhibition, which closed on Thursday last was attended by 122,589 people, an increase of over 50,000 more than at any previous show held in St. John. The exhibits made by hardware and stove dealers were exceptionally good, being on the whole far in advance of any previous fair.

A striking feature of the exhibition that was much commented upon by visitors as well as local people was the "Made in St. John" exhibit, of the St. John Board of Trade. This exhibit which was 80 feet in length by 10 feet in depth, was tastefully arranged, and in it was shown a sample of the many lines of goods made in St. John. It proved to be an educator even for the local people. Secretary Anderson was in attendance and distributed literature to all who cared to have it.

STORE ISSUES PRIZE COUPONS.

Tilbury, Sept. 17.—During the present month the W. C. Crawford departmental store is issuing to every cash purchaser a prize coupon with every $1 worth of goods bought in the store. These coupons give the recipient a chance to figure as the winner of one out of 41 prizes being offered for competition.

The contest lasts practically a month, commencing on Aug. 29 and ending Oct. 1. It is a repetition of a similar contest which took place in August.

The prizes offered are, to the first ten prize winners, $10 each in cash; the second ten, $5 each in goods; the next twenty, $2 each in goods; and to the 41st, a "Big Store Special" sewing machine. In addition, each customer not a prize winner is entitled to trade checks, redeemable in goods, to the amount of 5 per cent of the original purchase, where the latter total at least $10, during the time of the sale, thus placing the ordinary purchaser on a par with the $2 prize winners, with the exception that the latter may draw a prize without spending the $10.

The coupons issued to customers are numbered consecutively. Duplicate numbers are retained in the store, and from these, on the Saturday night when the sale concludes, are drawn the 41 prize winning numbers. Ten extra numbers are also drawn, to provide alternates in case any of the holders of prize-winning numbers fail to put in an appearance within one month. The drawing is done by a committee of leading citizens, not connected with the store.

To encourage the payment of back accounts, one prize coupon is issued for every $2 paid on account during the sale.

The sale is liberally advertised in the Tilbury paper, as well as in papers in adjoining towns.

MERCHANTS MAKE IMPROVEMENTS.

Lindsay, Sept. 20.—Two Lindsay stores are at present making improvements to their premises.

MacLennan & Co. are repainting the front of the well equipped store they moved into fifteen years ago after over a third of a century in their former stand. This week MacLennan & Company had a display of imported cast aluminum ware in their window.

D. Cinnamon, president of the Ontario Retail Hardware and Stove Dealers' Association, is thoroughly renovating his store and enlarging it by taking in a store room in the rear which will be used as a stove display room and office, a new typewriter having been added to the office equipment. The enlargement of the store will make it 22 x 100 feet. New shelving will be erected, the front windows will be remodeled, plate and prism glass windows will be installed in the rear, the depth of the cellar will be increased and a new floor constructed. The premises have just been purchased by Mr. Cinnamon and he is losing no time in putting them in a thoroughly first class shape.

This week Mr. Cinnamon has the "Dover" sad-iron automaton in his window to attract the attention of visitors to Lindsay during the big "Central" fair. The price of "Asbestos" sad irons here is being maintained at $2.25 per set by the dealers who handle them. This is very satisfactory as, in reply to a question as to the effect of mail order competition in Lindsay, Mr. Hopkins, of the J. G. Edwards' store, said: "Competition is so keen locally in hardware that the mail order houses cannot get a look-in."

J. G. Edwards spent the past week in Toronto on business.

Boxall & Matthie recently completed the erection of an extension to their store which is to be used as a tinshop, a second storey being added to the workshop in the rear. Now the tinsmiths have a well lighted and fully equipped workroom while the plumbers and fitters have the old workroom downstairs.

Boxall & Matthie are finishing up the plumbing and heating work, amounting to $3,000, on the new nurses' home at Lindsay, and have secured the contracts for both plumbing and heating on two new schools being erected by the Lindsay School Board. The contracts will total to $9,000.

The R. M. Beal Leather Goods Company, whose tannery was established here ten years ago, is building up a large trade in moccasins, carrigans, shoe packs, leather and canvas leggings, etc., with the hardware and general stores doing business in lumbering districts.

GLUE FACTORY AT CANSO.

Halifax, Sept. 19.—Wholesale hardware dealers report trade a little quieter during the past week than they anticipated. Prices are very firm. Both linseed oil and turpentine are still advancing steadily, the natural result, it is claimed of the decreased yield of the flax crops. Turpentine is now quoted at $1.10 per gallon, and linseed oil $1.15, advances of 10 and 15 cents respectively during the past week. Another effect of these abnormally high prices is that mixed paints of all kinds are also high and will naturally continue so while high prices prevvail for oil and turpentine. All cotton goods are very firm.

Quotations on sheet zinc are also higher, but prices have not yet been advanced on the local market. Collections are somewhat below the normal for the season of the year, the natural result of the quietness in hardware trade circles.

Wire nails are quoted at $2.50 and cut at $2.70; sheet zinc, in casks is 7¼ cents, and sheet lead 5 cents. Burrel's English white lead is quoted at $7.50, and Canadian from $6.25 to $7.25. Cold blast lanterns are selling at $6.75 per dozen, and Manilla rope at ten cents.

The newest industry at Canso is the Robinson Glue Co., Ltd., which has erected an up-to-date factory for the manufacture of glue. The factory will make use of the waste products, which have

heretofore been used for fertilizing purposes or carried out to sea. The capacity of the plant is ten tons of fish offal per day.

The large addition to the Coke Ovens plant at the works of the Dominion Steel Co., at Sydney, will mean a very important increase in the output of the Dominion Tar & Chemical Co.

ARRANGING FOR CONVENTION.

Peterboro, Sept. 19.—At a meeting of Peterboro manufacturers selling to the hardware trade, held on Monday evening, it was decided that an exhibit of "Made-in-Peterboro Hardware" would be made in one end of the armories during the retail hardware convention to be held here next February. Representative of the Lundy Shovel & Tool Co., Rapid Tool Co., Peterboro Lock Co., and J. J. Turner & Sons, were present, while others sent word that they would co-operate in anything that was done. It was decided to arrange for the exhibit, and Ald. J. J. Turner, junior, was appointed secretary. Another meeting will be held next Monday evening to complete details. President Cinnamon, Lindsay, Treasurer Caslor and Secretary Wrigley, Toronto, were present representing the Ontario Retail Hardware Association.

The Peterboro Hardware Co. used the "Asbestos" sad iron automaton window display last week, and scores of interested women were seen watching the mechanical window during the display. And that the display paid is shown by the fact that sales totalled about five dozen sets during the week.

A splendid ammunition and fire arms window is being shown by the Kingan Hardware Co., this week.

MADE IN GALT EXHIBIT.

Galt, Sept. 19.—A meeting of Galt manufacturers was held on Monday to discuss the making of arrangements for a "Made-in-Galt" exhibit at the Peterboro convention of the Ontario Retail Hardware Association next February. It was decided that if suitable arrangements can be made for space that the idea be taken up. The exhibit will probably include goods made by the Shurly-Dietrich Co., Allan Hills Edge Tool Co., Galt Art Metal Co., R. McDougall Pump Co., and the Down Draft Furnace Co.

WATERWORKS AT DAUPHIN.

Dauphin, Man., Sept. 19.—Sutherland & Stelch, hardware merchants, report business good in this district and splendid crops this year.

A gravity waterworks system is to be installed by the town at a cost of $175,000.

LOCATIONS IN WEST.

J. P. Reid, Georgetown, Ont., asks for information regarding the possibilities of conducting a first class hardware store in Fox Coulee, Camrose, Irricana or Green Trees, Alberta, including the population and locality of each place.

Camrose is undoubtedly the most important of the places named. It is on the Pheasant Hills branch of the C.P.R., about 25 miles east of Wetaskiwin, and is the crossing for the Wetaskiwin to Vegreville branch, and the branch running south from Tofield, on the Grand Trunk. As there are three roads running through it, it is a rather important town, with a population of about 1,200, having three banks and two hardware stores.

Irricana is on the Langdon branch of the C.P.R., 47 miles northeast of Calgary,, and about 20 miles east of Airdrie, on the Calgary, Edmonton line. It has a population of about 50, with one bank, two general stores, two hardware stores, a hotel, lumber yard and drug store, etc.

Fox Coulee is not at present on a line of railway, but is about 40 miles from Acme, which is on the line, being built from the main line of the C.P.R. to Red Deer, and Fox Coulee will be comparatively close to the Canadian Northern Railway, running from Saskatoon to Calgary. At the present time the population of the place is small, but there are two banks, two general stores, a lumber yard and a drug store.

Green Trees is not yet on the map as it is not known by the post office or railway authorities.

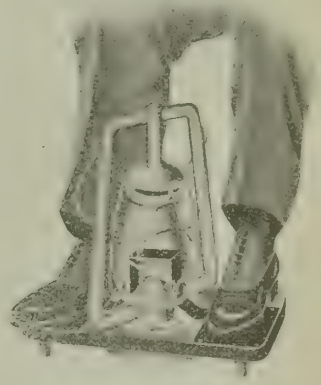
PAINT MAKERS ADVANCE PRICES.

The paint and varnish manufacturers of Montreal have decided upon a general advance in paint and allied lines. At a meeting of the Montreal Linseed Oil, White Lead, Paint and Varnish Section of the Canadian Manufacturers' Association held on Tuesday, it was agreed that the Montreal manufacturers of paint, varnish, lead and putty in consequence of the largely increased cost of raw materials should increase the price of all paints, white lead, varnishes and varnish products commensurate with the advance in raw materials. This action was supported by manufacturers of paint and varnishes in all parts of Canada, who have written the Montreal section either giving advice of an increase already effective or notice of an early announcement of increases.

The new prices on white lead in oil, Government standard, are $5.50 in ton lots and over and $5.75 in less than ton lots, f.o.b. Montreal. Toronto prices are $5.65 and $5.90, f.o.b.. Booking at these figures will be accepted for delivery not later than the end of November.

The Sherwin Williams Co. in announcing to their agents and dealers the advance in prices, state that the price of Sherwin-Williams' Paint Prepared and Porch Floor Paint is advanced 20c per gallon, Inside Floor Paint 15c per gallon, Roof and Bridge Paint, Creosote Paint, and Commonwealth Barn Red 10c per gallon, in all size packages. The company also state that they will have to advance their complete line of shelf goods, varnishes and other specialties, and they are now re-figuring their prices and in the meantime all prices on these lines are withdrawn. The announcement is made that the advances in prepared paints and the revised prices being made on shelf goods and varnishes will not be sufficient to cover the increased cost in raw materials, and if lower prices on staple raw materials do not prevail in the near future further advances will have to be made.

Martin Senour Co. have advanced their 100 p.c. pure, 20c and their floor paints 15c.



Brandram Henderson have advanced "English" to $1.95.

Ramsay's pure is now $1.60 and their Thistle $1.30.

Jamieson's Crown and Anchor is $1.60 while Dods Island City pure paint is also $1.60.

ONTARIO LANTERN FOOTWARMER.

With the first touch of cold weather, progressive merchants look about for novelties appropriate to the season. The Ontario Lantern Footwarmer only recently introduced is such a novelty and is manufactured by the Ontario Lantern & Lamp Co., Hamilton. The Ontario Footwarmer, after the severest tests, fully substantiates every claim of the inventor. Placed beneath the robe, which in no wise interferes with its combustion (nor is the robe in any danger of being damaged by the foot warmer), it effectively warms the feet and thus the whole body even in the most severe weather, and should a light at any time be required, it is immediately available for that purpose. The copper ribbon, by a scientific arrangement, does not effect the radiation of light. Although only on

Ontario Lantern Footwarmer.

the market a very short time, orders are so heavy that the factory has been working nights for the past month to insure sufficient stock to meet all requirements.

The Ontario Lantern & Lamp Co. have issued a folder for distribution to the trade, and have also published a nicely illustrated booklet for retailers to distribute to the public. In connection with this booklet, there is a competition open to any child under 14 years of age, a prize of $5 being offered for the folder returned to the manufacturer by December 20 next, which in their opinion is the most artistically colored. Each child competing must give the name of a dealer from whom her parents purchased one of the lantern footwarmers.

If you have been playing in hard luck and think you are about to the end of your rope, just bear in mind that plenty of other men have been worse off and have yet made good.

HARDWARE TRADE GOSSIP

Ontario.

W. T. Creighton & Co., tinsmiths and roofers, Hamilton, have dissolved.

The Windsor Hardware Co. has secured the contract for a new steam heating plant for the Iroquois Hotel there.

H. C. Marlatte, traveling salesman for the Tobin Arms Mfg. Co., Woodstock, Ont., has gone on a business trip to Newfoundland in the interests of his company.

A project is on foot to bring natural gas to Woodstock, Ont., during next year from near Lake Erie. Considerable finds have been made near Port Burwell and Port Bruce.

The Ontario Iron & Steel Co., Welland, last week turned out a wheel weighing twelve tons, it being the largest casting ever made in Canada. It was manufactured for Allis, Chalmers, Bullock Co., Montreal.

Lieut.-Col. W. M. Gartshore, general manager of the McClary Mfg. Co., and F. E. Leonard, of the engine and boiler manufacturing firm, both declined the seat on the board of water commissioners, London, made vacant by the death of A. T. McMahen, president of the Board of Trade. J. H. Chapman, drygoods merchant, was finally selected.

Quebec.

J. M. Dessert & Fils, tinsmiths, Roxton Falls, have been incorporated.

L. Hamel, Nicolet, was a caller on the Montreal hardware trade this week.

L. Paquette & Frere, hardware merchants, Montreal, have sold their business to Willie Bray.

N. P. Tracy, of the Canadian Northern Quebec Railway was a caller on the Montreal hardware trade.

Fire broke out in the paint factory of McArthur, Corneille & Co., Montreal and caused damage between $25,000 to $30,000. It took the brigade over half an hour to overcome the flames.

A. Laberge, St. Michel Napierville; H. Coursol, Avoca; V. Lebault, St. Laurent; G. Brasseau, Quebec; A. Desjardin, St. Joseph du Lac; I. Honde, St. Prospere; A. Lemieux, Henryville; C. Labelle, Three Rivers, and J. P. Lacroix, St. Lin, Que., were noticed in Montreal during the week.

Western Canada.

C. H. Prest, hardwareman, Kelliher, Sask., is succeeded in business by the Kelliher Hardware Co.

F. A. Cameron, tinsmith, Lumsden, Sask., is succeeded in business by O. G. Wallace.

P. J. Sutherland has started a hardware business at Birch Hills, Sask.

Maritime Provinces.

A sheriff is in possession of Geo. Stothart's hardware business at Chatham, N.B.

A meeting of creditors of R. H. Connick, tinsmith, at St. Stephen, N.B., was held on Sept. 22.

INDUSTRIAL NOTES.

The International Tool Steel Co. have definitely decided to locate at Port Hope, and will at once commence the erection of four buildings. Fifty men will be employed at the start and $35,000 will be expended on machinery and plant. Twenty furnaces will be installed at first, to be increased to fifty later on.

Major J. A. Currie intends to establish a screw and bolt factory at Collingwood. A two-storey mill building will be erected at once, and $50,000 will be expended on plant and machinery. From 80 to 100 men will be employed when the works are in operation.

The Hamilton Bridge Works Co. have taken out a permit for the erection of an addition to their factory at Hamilton, to cost $10,000.

The contract for the office and main building of the Canada Smelting & Refining Company's plant at Orillia, has been awarded to E. Webb.

NEW COMPANIES.

British Columbia Portland Cement Co., Princeton, B.C.; capital, $500,000; to manufacture cement. Incorporators, R. P. McLennan, Vancouver; L. W. Shatford, Hedley, and Reuben Cross, Spokane, Wash.

The Dorchester Peat Co., London; capital, $75,000; to manufacture peat fuel. Incorporators, John McWilliams, J. M. McEvoy, London, and Jas. McLean, Dorchester.

The Dominion Stove and Foundry Co., Penetanguishene; capital, $250,000; to establish a foundry for manufacturing stoves of every description, furnaces, boilers and other heating apparatus. Incorporation has been granted by the Ontario Government. The provisional directors are Chas. Beck, D. A. Lahey, C. E. Wright, Chas. McGibbon and Dr. P. A. McDonald, all of Penetang.

NEW STEEL INDUSTRY.

Hamilton has secured a new industry in the decision of the Canada Steel Company to invest $400,000 in the erection of a steel mill to employ 300 men, Hamilton being chosen solely because it was the best market for the finished steel products to be turned out by the company. "We did not ask, nor did we receive any concessions," said President F. W. Baillie to Hardware and Metal.

The Canada Steel Company was granted a charter by the Ontario Government in May last, while about the middle of June the steel merger changed its name from the "Canadian Steel Corporation" to the Steel Company of Canada. To avoid confusion as a result of the similarity in names the Canada Steel Company recently offered to change its name if the Steel Company of Canada would pay the cost of a new charter. The offer was not accepted, however.

Toronto and Montreal capitalists are supplying the capital for the new enterprise, the officers of the company being F. W. Baillie, Toronto, president; R. M. Bertram, Toronto, vice-president; W. M. Currie, Hamilton, managing-director; A. T. Malone, Toronto, and G. W. Morrow, Toronto. Mr. Currie was formerly chief inspecting engineer for the Hamilton Steel and Iron Company. The mill will use old steel rails, and by a new process split these into three sections, and roll them simultaneously into bedstead angles, light structural angles, agricultural shapes, concrete bars, plow beams, sleigh shoes and similar articles. A six acre site opposite the works of the Atkins Saw Company has been secured on Sherman Avenue.

Editorial Man Wanted

■

WE have decided to add to our Editorial Staff and wish to secure the services of a bright, energetic young man who is familiar with the hardware trade and has had some journalistic experience.

Applicants should give full information regarding age, preliminary education, experience and state salary expected.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Sept. 22.—Until the present local jobbers have been content to work on short stocks, but as the demand grows for regular fall shipments and the closing date of navigation approaches, there is an attempt to increase local stocks. The general market is held particularly strong in tin plate, solder and Canada Plate, and demand is good for these goods. Fall orders are heavy for lanterns, stoves, stove-pipes and a wide range of winter and fall sporting goods.

The weather this week and for some days past has been ideal, and as a result trade generally continues active. There will be plenty of work for builders and finishers for many weeks yet, owing somewhat to the delay caused by the builders' strike. It was reported in local circles last week that the completed buildings begun in 1910 is past the million dollar mark, which is something of a record.

Winnipeg Hardware Quotations.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75.

Auger Bits—"Irwin" bits, 47½; other lines, 75 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—planished copper, 33½c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, $4; pressed standing seamed roofing, 28, painted, $3,20; galvanized, $4; 26, $3.55 and $4.35.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 10; diamond, 50; granite, 60 per cent.

Fittings—Wrought couplings, 60; nipples, 75; malleable fittings, 25; bushings and unions, 60.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.80; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37¾ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2, and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3,30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50. Galvanized, ¼-in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼-in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $4.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper No. 8, 30c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c per lb.

Rope—Sisal, 9½; pure manila, 11; British manila, 9¾; lath yarn, 9¼c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—22c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $8.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.50.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box. $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2.90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.75.

Paints and Oils.

An enormous trade is being carried on for all kinds of paints, finishing and lubricating oils and glass and putty. The feature of the week is the heavy output and advancing prices. Rarely has the local market been so strong as it is at present in almost every line. High price of goods in primary form, and the great rush in finishing everywhere in the west, is the cause of the present firmness of the market.

Putty and Glass—Putty has been advanced 40 cents per 100 lbs. due to the big jump in oil. The output is heavy, as is also the case with glass. In bbl. lots, $2.90; cases, $3.15; kegs, $3.40.

Linseed Oil—A further advance of three cents is reported and the figure now stands at $1.15 for the raw and $1.18 for the boiled. The market is very strong and it is not known what the future will be. It would seem, however, that the price might reach an unprecedented figure. Crops are seriously short and record prices are being paid for seed.

Turpentine—We cannot quote turpentine above the $1.05 mark, yet jobbers claim that it cannot be laid down here for less than that figure. All local distributors do not quote the same price, although with the majority the $1.05 figure has been ruling. It would not be surprising to see $1.10 market next week. Short crop in the south is the cause of the advancing market.

White Lead—Large quantities are going out at $5.75 to $6.25, according to brand. The margin is small at this figure, and higher prices ought to rule. The oil market is affecting all other paint lines.

Varnishes—Jobbers report a splendid season for varnishes. Household specialties have moved well and the demand for industrial use has greatly improved.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 24c; Searchlight, 22c; Red Rose, 25½c; Keystone Special, 20c; Pemoline, in bulk, 19c; Silverlight, in bulk, 16c; Acme lamp, in bulk, 28c; White Rose, in bulk, 22c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

Humanitarian Mission of Sheet Metal Worker

Address by Dr. Wm. F. Colbert, Lecturer for the Federal Furnace League, Before the Sixth Annual Convention of Master Sheet Metal Workers Last Month.

We are living in a progressive age. We have seen wonderful improvements in machinery, in transportation facilities, in methods of communication, in building construction, etc. We have the voices of great singers and the music of famous bands and orchestras reproduced by the phonograph, and the reproduction of interesting events in moving pictures. All of these developments have either increased the wealth producing power of man, or have contributed to the pleasure he derives from the hours devoted to recreation.

Recently a national interest has been aroused in improvements of quite a different sort from those mentioned above. Never in the history of the human race has there been so much interest taken in measures looking to the mental, moral and physical uplift of the race, as has been shown in the past five years, and this interest is constantly increasing.

The national and the local magazines and periodicals devote a large portion of their reading space to articles describing the work of various free schools, health boards, Anti-tuberculosis leagues, philanthropic societies, civic betterment organizations, etc., the work of all of which may be classed as humanitarian, i.e., for the uplift of mankind. The investigations of scientists and statisticians interested in the work of these organizations have demonstrated the fact that mental and moral status of the individual is largely dependent on his physical condition.

Consequently, we now have such organizations as Milk Committees, Bureaus of Child Hygiene, etc., to look after the food and the health of the infant, County Weed Associations, Children's Playground Associations, and the Health Boards co-operating with the Board of Education in attending to the physical welfare of the child; Mothers' Congresses and Free Cooking Schools, etc., who look after the mother and spread information concerning proper diet for the family. As a direct result of the agitation of these agencies, with the active co-operation of food packers and grocers' associations, we now have some fairly efficient pure food laws.

A more recent development in the work of these organizations has been a proper appreciation of the value of fresh air. In fact they have come to realize that plenty of fresh air is even more important than the proper food. This should have been realized long ago, for there is nothing new about the physiologist's saying that, "A man can live three weeks without food, three days without water, and three minutes without air." It does not require a savant to deduce from this saying, that fresh, pure air is even more necessary to the well being of the human race than either pure water or pure food.

As a result of this somewhat belated appreciation of the value of fresh, pure air, the representatives of these societies, in addition to distributing pure milk, teaching mothers how to prepare cheap, but nutritious meals, etc., are preaching the gospel of Fresh Air. This has been done with such decided success that a writer in the current number of Hampton's Magazine mentions the fact that a new word "Freshair," all one word, has crept into the Yiddish vocabulary in the slums of New York City.

A little more experience will impress these workers with the fact that it is impossible to secure much fresh air in winter unless some special provision is made for ventilation.

Home Dwellers Health Injured.

However, the dwellers in the slum districts are not the only portion of our population who are injured by a lack of fresh air in their houses during the winter months. Any American home that is not warmed by a purely indirect system of heating, with all the cold air supply taken from outdoors, suffers from a lack of fresh air during the winter months.

The Chicago Health Department is alive to this fact. E. R. Pritchard, the secretary of the Department of Health, of the City of Chicago, at the meeting of the Midland Club, June 28, 1910, said: "In fact, so marked has been the increase of the death rate from pneumonia and the bad-air diseases in Chicago during the past ten years, that we have named pneumonia as the New Captain of the Men of Death, and we have come to regard the steam-heated flat, with its dry and overheated atmosphere, a serious menace to public health. It was the discovery of the indoor conditions under which so many people in Chicago were living, that prompted the Department of Health to start the campaign for fresh air, which it is still waging with all the forces it can command." He also refers to "steam heated tunnels," called by courtesy, flats or apartments.

That others are alive to the necessity for proper ventilation of the home during the winter months is demonstrated by reading Dr. Woods-Hutchinson's story, "Catarrh, a National Nasal Luxury," which appeared in the Saturday Evening Post, of February 12, 1910. In the course of his article, Dr. Hutchinson notes the fact that, "neither Peary nor Cook nor anyone of their parties—had a trace of a cold, bronchitis, pneumonia or catarrh during the whole of the sojourn in the Artic regions, though often under the most trying conditions as to wet, cold and exposure. The moment, however, that they reached civilization on their return—Cook in Greenland and Peary at Sydney—from one-third to one-half of their parties took furious colds and sneezed and snuffled and wept to celebrate their return to warm houses and foul air." In the illustration commemorating this interesting event, the artist, Mr. Peter Newell, has shown a fine appreciation of the truth, by picturing four men standing before a cast iron direct heating radiator and literally, "sneezing their heads off."

So much for the condition of the air in our homes during the winter months, when direct radiation is used as a heating medium. But don't delude yourself into the belief that because an indirect system of heating is used, the air in the house is as pure as it should be in all cases. Indoor air is sufficiently pure when a gravity system of ventilation is installed in connection with the indirect system of heating, with all outdoor air supply. But when the gravity system of ventilation is omitted, it sometimes happens that the building is so airtight that not sufficient air leaks out to permit the house to be properly heated by a purely indirect system of heating. When you fail to secure air leakage to permit the introduction of sufficient volumes of fresh warmed air to properly heat a room, to 70 degrees Fahr. in zero weather, with the incoming warm air at a temp. of 140 degrees to 160 degrees Fahr., it is a certainty that you have also failed to secure enough leakage to provide sufficient ventilation.

Ventilation in Winter Weather.

To provide sufficient ventilation in ordinary winter weather, 25 degrees to 35 degrees Fahr., the register temperature should not exceed 130 degrees Fahr.

The use of return circulation of air, either partial or complete, in residence heating cannot have other than an unfavorable effect on the health of the occupants of the home.

The complet return circulation of air is as bad as the use of direct steam or hot water radiation so far as ventilation is concerned. Theoretically, this method would be far more economical than a ventilating system; practically, the difference in fuel consumption is not very great. Any slight advantage in heating economy is overbalanced by the disadvantage in heating efficiency. Return circulated air is more readily affected by wind pressure than any other indirect system of heating.

Partial return circulation of air is nearly as bad as complete return circulation. The plea is made that the air is only returned from the 1st floor at night, when every one is presumably in bed and the 1st flat is deserted. That is very good in theory, but the fact is that people use the return circulation all of the time. Partial return circulation of air creates currents of cool air that have an unfavorable effect on heating efficiency. Furthermore, if the partial return circulation is used only during sleeping hours, the saving in fuel is theoretically only about 8 per cent., and

in practice it would not exceed 4 per cent., because the return circulation is not at all positive in action. I submit the fact that in the average home this would mean a fuel saving not to exceed $4.00 a season. Rather a small saving and not worth while when one considers the fact that people use the partial return circulation at all times, and as a result have insufficient ventilation, instead of using it at night only, as intended by the designer of the system.

When this fact is pointed out to some men, they say it is not their fault if people do not use the system as they intended it to be used. As there is no printed list of directions furnished with a partial return circulation system, this verbal evasion always reminds me of Cain's question, "Am I my brother's keeper?" The man who evades responsibility for the welfare of fellow beings, who have entrusted him with a contract to heat their home, without injuring their health, cannot be classed as a humanitarian.

Too Much Ventilation Impossible.

There are many architects, heating engineers, and building contractors, as well as sheet metal workers, who believe that a warm air furnace system, with all outdoor cold air supply and a gravity system of ventilation, provides too much ventilation. Such a thing as too much ventilation is impossible. Dr. Evans, the Health Commissioner of Chicago, uses a terse sentence, which exactly states the truth, "Too much fresh air is just enough." Burton Hendrick's excellent story, "Oxygenizing a City," in the current number of McClure's Magazine is the best corrective that I can prescribe for that large section of the community who suffer from a form of brainstorm, whose symtoms may be best described as a horror of any system of heating that will introduce fresh air into the home and an uncanny delight in living with one foot in the grave.

However, for the benefit of those who believe that a warm air furnace system, with all outdoor cold air supply and a gravity system of ventilation, provides too much ventilation, I would state that such a system of heating will provide in a living room of ordinary size, good ventilation for three to five persons, according to the proportion of exposed wall and glass surface. Bedrooms are usually smaller than living rooms, have lower ceiling and smaller windows, so that the bedroom usually requires only a little over one-half the air supply that must be delivered to a living room to properly warm it. Is it not ridiculous to advocate a complete or even a partial return air circulation, which will greatly reduce the amount of fresh air poured into the rooms?

The humanitarian mission of the sheet metal worker can only be fulfilled by those men who are willing to think, talk, advertise and do warm air furnace heating of the right sort, i.e., with a furnace that is adequate to do the work imposed on it, with properly proportioned warm air piping, with all outdoor cold air supply, with ventilating ducts and with proper provision for humidifying the air.

The furnace that is adequate to do the work imposed on it and properly proportioned warm air piping should be furnished by the heating contractor as a matter of business honor. The outdoor cold air supply (with no return circulation and with no cellar-air supply), the system of ventilation ducts and the proper provision for humidifying the air are the items that the sheet metal worker must strive to have included in his heating contracts if he would succeed in fulfilling his humanitarian mission in life, for it is only where he succeeds in having these items included in a residence heating contract that he secures a contract for the most healthful system of heating. Every time the sheet metal worker secures a contract of this sort, not only has he done something that will have a good influence on the health of his customer and his family, but he has also indirectly raised the standard of health in the community. The sheet metal worker should take a keen interest, not only in the science of heating, but also in ventilation and air conditioning. A broad knowledge of all three will give him an implicit confidence in furnace heating that he cannot secure in any other way, and the confidence thus gained is a money maker—confidence inspires confidence—for it will have a most favorable effect on prospective customers.

You may say people will not pay the difference in price between the kind of heating done by the ordinary do-it-the-easiest-way sheet metal worker, and the sheet metal worker who is trying to live up to his humanitarian mission in the great scheme of life,—I say that they will pay the difference in price, if you will do the things that you must do to live up to your humanitarian mission in life, i.e., think, talk, and advertise as well as do warm air furnace heating of the right sort. Before a man pays you more money than he would pay to another contractor, he wants to know the reasons for the greater cost. The man who thinks in terms of the right sort of furnace heating will have little trouble in supplying reasons that will convince the average man that the increased outlay is well worth while. Remember that the man who admits that his price is regulated by his competitors' price at the same time admits that he lacks the initiative and the force possessed by a truly successful man.

Furnace Manufacturers Help.

The Federal Furnace League wishes to aid the sheet metal worker, who is willing to strive to fulfill his humanitarian mission in life and to that end has in course of preparation a complete system of heating and ventilation by the warm air furnace method. The sheet metal worker who follows the rules laid down in this system of heating and ventilation can feel assured that he is providing ample ventilation under ordinary conditions. If he follows out the recommendation as well as the rules of the system he can also feel assured that he is providing sufficient moisture in the warm air that is sent into the rooms. He will be protected, because, if he makes his furnace installations substantially in accordance with the rules laid down in the system, the furnace manufacturers will assume the responsibility of guaranteeing to the owner that not only the furnace, but also the complete heating plant will do the work required of it. As it is proposed that only the better grade furnaces shall be rated in accordance with the system, the man who wishes to do good work not only will no longer have to meet the competition of the cheap, irresponsible sheet metal worker, but also will have him at an immense disadvantage in the race for patronage.

In addition to issuing the complete system of heating the Federal Furnace League will continue its engineering department for the purpose of aiding sheet metal workers to solve knotty problems in layouts and to give advice where extraordinary conditions have to be provided for in planning a furnace heating plant.

The sheet metal worker who succeeds in living up to his humanitarian mission in life will increase his net profit per contract, for his average contract price will be higher than he secured when he attempted to meet competition only on the basis of price.

He will also secure more contracts, because he will soon build up a reputation in his community and he will not only secure contracts that he would have lost to another sheet metal worker on the single basis of price, but he will also make heavy inroads on the business of the direct steam and hot water heating contractor, for the day of direct steam and hot water radiation for residence heating is rapidly passing to make way for the day of indirect warm air method, with ventilation.

All these things mean a greater volume of business and a greater net profit for the sheet metal worker who succeeds in fulfilling his humanitarian mission in life. The measure of his financial reward will only be limited by the intelligence and energy with which he strives to fulfill his mission. Aside from financial reward, he will have a higher standing in his community, the respect of his competitors and the satisfying knowledge that through his efforts he has bettered the health of his community and indirectly has had a good influence on the lives and health of hundreds and even thousands of human beings as yet unborn.

Can you ask for a mission in life that offers greater opportunity for useful service to mankind or one that offers greater rewards to the successful man than the humanitarian mission of the sheet metal worker?

In a paint store the subject of brushes is worthy of careful study. How many men who sell brushes know all about them? A careful perusal of the various brush catalogues and books, together with daily familiarity with the stock, will soon make a retail salesman master of brush details.

There are two classes of customers—those who buy willingly and those who must be induced to buy. Selling to the former is but child's play, but selling to a possible buyer who must be induced to buy is the serious business of the trained salesman.

Put all the responsibility you can on clerks who will shoulder it. Don't attempt to do anything about the store yourself. A boy who can't be trusted to sweep and clean carefully is not worth keeping, and the same is true of a clerk who will not keep his stock in order.

No. 27

SAFEGUARDING THE PAINTS.

Take an interest in your customers and the painting jobs they have on hand. Many a good brand of paint has been condemned, and the merchant likewise, because a purchaser has tackled some painting without possessing the slightest idea of the correct way in which the paint should be used. There is an erroneous idea that paint, like charity, should cover a multitude of sins, and that grease, blisters, and everything else should be completely put out of sight by a quart tin of paint, and a surface shown that is a perfect marvel of freshness and of beauty. Now we all know what paint can do, but still it cannot accomplish miracles, and therefore the merchant should take particular pains to see that an ignorant customer does not misuse the paints without due warning that certain conditions of surface should obtain before paint is applied.

In the case of stain even more mistakes are made. Stain is applied to a floor on which dabs of old paint, or of grease are showing, and in the ignorance of the users it is expected to cover all this. Many a householder buys some varnish stain, and without troubling to prepare the surface of the floor in any way, even by giving it a thorough washing, proceeds to stain. The result is that all the old dirt not removed by the brush stands out more prominently than before. The user does not blame himself, but lays the onus on the paint and on the poor merchant. Then again there is the little habit of forgetting to stir the paint well. The directions on the tin are read probably once, and directly the tin is opened the mixture is stirred, but although the tin may be laid aside for some hours, afterwards there is no second stirring. The result is a poor job, although the user says afterwards "I remember distinctly stirring the paint."

The merchant may say, "all this is very well, but I am not in business to be a teacher of the ignorant, I am here to sell goods." Quite so! but unfortunately the selling of goods is indirectly affected by this ignorance. A disgruntled customer can do a lot of harm to a store without the merchant knowing about it, and being able to refute whatever charge is made. It is worth while taking a little pains to see that the opportunity of making a mistake in painting is reduced to a minimum. A merchant can, when making a sale easily find out whether the customer knows anything about painting, and if there is general ignorance as to the correct method

Every woman who passes your store will come in some day for M L Floorglaze

It earns you your profit and it satisfies the user for any indoor or outdoor purpose paint or varnish can serve. It lasts longer and looks better. If you don't know it, you can have a

MONTREAL

of using the mixture then he can do all that lies within his power to see that a satisfactory job results. A customer too, appreciates the interest taken in the sale by the merchant, and spreads around the statement that "So-and-So is very obliging. He took a lot of interest in the painting of my floor, and gave me some good tips." This is very valuable, especially in the case of a woman customer.

A merchant cannot be expected to check all the misusages of his paints by customers, but he can largely reduce the percentage. It means extra strain on the merchant, but the results are well worth while. If a customer brought back his complaint directly to the merchant all would be well. The latter would have a chance of reestablishing his paint in the eyes of the customer. But very often—more often than not—the customer when dissatisfied does not say anything to the merchant but says a whole lot to the people round about. This is a serious matter for the store and the reputation of the particular brand of paints carried.

PAINT AND OIL MARKETS

MONTREAL.

Sept. 23.—Still going higher, linseed oil was advanced during the week 6c and prices were quoted at $1.08 for raw and $1.11 for boiled. These prices have naturally been telling on liquid paints, and manufacturers have been discussing conditions during the last two weeks. As a result prices have been advanced all the way round from 15c to 30c, and the question is has the end yet been reached. Asked as to when the rise is to stop, manufacturers reply "It all depends upon linseed oil." Turpentine is unchanged in some quarters although in others 2 to 3c more are being asked and obtained. White lead has also advanced 25c per 100 lbs. Other lines are unchanged but very firm in sympathy with linseed oil and turpentine.

Trade is very good and a steady fall movement is noticed. The demand does not yet seem to be checked by the higher prices, and it is evident that painting had secured a firm hold upon the tastes of the public.

Turpentine.—The market is very firm, prices in some quarters being advanced 2 to 3c, while some holders are keeping to old figures. We quote from 97c to $1 Trade is very good despite the higher figures.

Linseed Oil.—With seed round $2.50 a bushel and the English market high, linseed oil continues to advance steadily. There is very little oil showing and the scarcity gets more and more pronounced. Holders are clinging to their stock very strenuously, and buyers are not welcomed. This week linseed has made one of the biggest jumps during the long sequence of advances and both raw and boiled went up 6c. We now quote $1.08 for raw and $1.11 for boiled.

White Lead.—As was anticipated white lead has advanced 25c per 100 lbs. Trade is steady, and grinders are shipping in good round lots. We quote $5.75 to $6.25 according to brand.

Red Lead.—The red lead market is firm, but prices are unchanged. Good round lots are being shipped, especially by the boats. We quote: Genuine red lead in casks, $4.75; in 100-lb. kegs, $5.25; less quantities at $6 25 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and small quantities, $5.75.

Varnishes and Japans.—It is expected that prices will be advanced shortly in sympathy with liquid paints. Orders are very good, the large users buying freely. Household lines are also in steady demand.

Putty.—Putty is unchanged in price. There is a fair demand. We quote: 100-lb. drums, $2.45; bladders, in barrels, $2.70.

TORONTO.

Sept. 23.—This is probably the most interesting week in the paint situation as regards price changes in a decade. It is certainly the most interesting week of the present year. Almost every paint line has made, or is making, advances. The high and still climbing prices of linseed oil is primarily the cause of the increased values on most of the lines, particularly is this so in regard to prepared paints, varnishes, putty and colors in oil.

White lead, too., is advancing. The Canadian grinders have come together again and have issued prices for present business, but are instructing jobbers that the figures hold only until the end of November with no booking beyond that date. Trading this month is splendid. Heavy booking is being done in nearly every line, many hardwaremen getting under cover before the advances. September will show at the close of the month one of the biggest fall month's business in several years.

Turpentine and linseed oil are still going higher, with stocks low on all hands. Some jobbers are refusing to sell because of dearth of supplies. Chicago has reached the dollar mark in oil, and quotations of raw and boiled oil in Detroit stand this week at $1.05 and $1.08 wine measure.

Turpentine — A further advance has been made in turpentine, and jobbers state there is no chance for them to make a reasonable profit over the present cost for carloads, but as the price is so extraordinarily high they fear that if they were to add to this it would stop sales altogether, and be a further incentive to parties to push substitutes on the market. While one house still asks 98c, and still another 99c for single barrels of "turps," the majority of houses are asking $1.02. The market quotation stands at $1.03—3c higher than last week.

Linseed Oil—This commodity, too, has again advanced, the market quotations standing at $1.07 and $1.10, while one cent higher than these figures is asked by a couple of jobbers. Early in the week oil could be had for $1.05 and $1.08 at

The Coming Years Will See

a great deal of painting done throughout the country. If you wish to sell your share of the paint that householders will use on houses, barns and other buildings, be sure to stock

B-H. "English" Paints

This line, in fifty beautiful shades, will help you to build up a permanent trade, for those who use it one year will want it for another job next year and the next.

The guarantee formula on every can shows that the base consists of 70% Brandram's B. B. Genuine White Lead and 30% pure White Zinc. The other ingredients are of the best.

This paint, by reason of its durability and other satisfactory qualities, makes a hit wherever tried.

Send post card for prices and selling plan.

The Paint the Painter Prefers

In selecting a line of paints to build up a big business on, Mr. Dealer, you will make no mistake when you get the paints the practical painter prefers. He knows good paint—and his endorsement will send many a customer to your store. Customers that it pays to have, because they come back over and over, and every one ready to speak a good word for your goods when he gets a chance. No paint pleases the practical painter like

MARTIN-SENOUR PAINT 100 % PURE

He likes it because every job he uses it on stands as a silent advertisement of his own workmanship and honesty. There's only one objection he might find with it **—it lasts so long.** But the honorable man—the man who values his honor—recommends it for that very reason. **So can you.** If you're in business for next year, and the year after the same, you'll get the agency for this paint as quick as you can. Write today and we will make the time mighty short before you have it if you mean business.

NEW YORK - - CLEVELAND - - CHICAGO

several houses, but the price has been firming up and these figures were not guaranteed over a single day. Some of these firms are now asking the market price and some have given up selling oil, stocks being almost completely gone. They are turning over inquiries and orders to rival firms. While linseed oil may appear unreasonably high to the consumer, yet, considering the price that is now demanded for flaxseed the crushers state they are barely able to get cost for oil now produced from flaxseed, that has been procured for this month, or that can be procured for delivery in October.

For both turpentine and rosin there is no possible chance of relief for the next four months, say the factors, as every barrel of turpentine coming to the shipping points in the Southern States is immediately picked up for what is claimed to be present demands.

Prepared Paints—Prices are advanced or advancing about 20c a gallon all round. The large paint manufacturers have already boosted their quotations, though some of the smaller plants and a number of jobbers are holding pat. All who have not changed, however, have with-drawn prices, and it is practically settled that all paint concerns in Canada will have new price lists by October 1. Some few there are who state that they are entirely in the dark regarding the situation, but it can be said that the scarcity of flxseed and the consequent high cost of linseed oil is responsible for the inflated cost of prepared paints.

White Lead—A white lead association has again been formed. This week a meeting was held at Montreal at which practically every grinder in the country was represented. The elimination of "No. 1" brands in Ontario has come into force and an advance of from 15c to 25c has been made on Government standard pure white lead. The Toronto (f.o.b.) association price is $5.65 for ton lots and over and $5.90 for less than ton lots. Instructions have been issued that no orders are to be taken for shipment later than the end of November. The elimination of "No. 1" brands will make for more satisfactory trading, though what have been called "No. 1's" will still be sold under distinctive brands by each manufacturer.

Red Lead—This line is unchanged in price and condition

Putty—All grades of putty have been advanced 10c, as a result of the higher cost of linseed oil. The new prices of standard putty are as follows:—Bulk in barrels, $2.20; in 100-lb. drums, $2.45; bladders in barrels, $2.70; in 100-lb. irons $2.80; 25-lb. loose, $2.55; cased, $2.60; 12½ lbs., cased, $2.80. Special putty prices are 10 cents below these figures for like quantities, and pure putty 35 cents higher.

Colors in Oil—As a result of linseed oil's high cost colors in oil have been advanced 2 cents a pound.

Varnishes—Manufacturers are either increasing quotations or withdrawing prices. The increased cost of linseed oil and rosin has sent up prices about 15 cents over recent quotations.

Petroleum—Prices are unchanged, but the market is firm. There is a tendency towards higher figures in both gasolene and benzine.

PRESENTATION AT MONTREAL.

Every one that could be spared from the busy offices and various departments of The Canada Paint Company, Montreal, was summoned by the "Call Boy" to appear in the Directors' Room of this company, a few days ago to present a testimonial to a member of the office staff, Robert Gardiner, who is about to take up, in the words of the old song:

"A Dear Little Wife
As a partner for Life!"

The presentation took the form of a handsome cabinet of cutlery, silver and a cheque.

ROBERT GARDINER, Montreal,

Who was Honored by the Canada Paint Co.'s Staff on the Eve of His Approaching Marriage.

The presentation was made by Robert Munro, managing director of the Canada Paint Company, who spoke of the sterling qualities of Mr. Gardiner, and expressed the pleasure that the staff in general felt at being present upon such an occasion. "Bobbie" as his forbears call him, between his blushes, responded in modest, but well chosen terms and invited the staff, upon his return from his honeymoon to see how he could manipulate the "carvers" and how deftly his "intended" could preside at the "tea service."

The meeting broke up with rousing cheers which shook the building and, almost made the "sprinklers" weep for joy.

QUALITY IS THE FOUNDATION OF ALL SUCCESSFUL ENTERPRISES. IF YOU ARE NOT SATISFIED WITH YOUR PRESENT TURNOVER ADDRESS THE CANADA PAINT COMPANY LIMITED.

Note: **The C. P. CO. colors and varnishes are sold by every Hardware Merchant who is desirous of increasing his volume of business.**

Window Glass

Many dealers do not recognize what good profits are made from the sale of Window Glass.

Just now Window Glass can be bought low and the prices for retail being well established the profits are high.

We have a splendid retail list showing the prices for retailing glass, that will be a help to all dealers.

We have just received enormous stocks of

Star Glass
Diamond Glass
Double Glass
26-oz. and
32-oz. Glass
Enamelled Glass
Colored Glass

We advise all dealers to look over their stocks. Now is the time to sort up when prices are low, and you are sure of having your assortment complete. The demand is very heavy, and it will be a case of first come first served for the best assortment very soon.

We are ready to quote or to ship.

STAR HACK SAW BLADES

Apparently no one questions the superiority of Star Hack Saw Blades and at our present figures there is absolutely no room to question the price.

They are equally good in hand frames or power machines. When used in a machine the feed should be adjusted to suit the stock being cut. The softer the stock the lighter the feed. Such treatment will prevent clogging of the teeth. Open your eyes wide and look at this list of prices:

6	7	8	9	10	11	12	inch
30	32	34	38	42	46	52	cents per dozen.

Notwithstanding the great reduction in prices, the quality of Star Blades has been improved.

REMOVER

Associated with Murphy Varnish Co., U.S.A.

WILL IT PAY?

This is the first question that is asked by any merchant when considering the purchase of modern store fixtures. The fundamental question is one of

Economy

A device is economical if

It adds cleanliness,
It is a convenience,
It makes labor lighter,
It makes labor more efficient,
It reduces the labor item,
It saves time.
It adds safety,
It adds neatness,
It helps the appearance,

It Saves Money

Considered from these standpoints the

BOWSER Self-Measuring Oil Storage System is the Greatest Economy.

The question is not "Can I afford it?" because it will pay for itself with money that was before wasted. It's simply up to you to investigate. The merchant who tries to see how much he can really get by adopting modern methods is the one who pulls the largest trade.

Write for Bulletin 15

Paint and Varnish Removers.

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish *in* Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	Name of Brand.
The Sherwin-Williams Co., Montreal, Canada.	**"Taxite"**
International Varnish Co, Ltd., Toronto, Canada	**"Klensa"**
Pratt & Lambert, inc., Bridgeburg, Ontario, Canada	**"Expedite"**
British American Paint Co., Victoria, B.C.	**"Bapco"**
Mount Royal Color and Varnish Co., Montreal, Canada	**"Scrape-off"**
James Robertson Co., Ltd., Toronto, Canada	**"Robertson's Paint and Varnish Remover"**
Sanderson Pearcy Co, Ltd., Toronto, Canada	**"Devolite"**
Stewart & Wood, Toronto, Canada	**"Solvo"**
Martin-Senour Company, Ltd., Montreal, Canada	**"Martin-Senour Paint and Varnish Remover"**

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

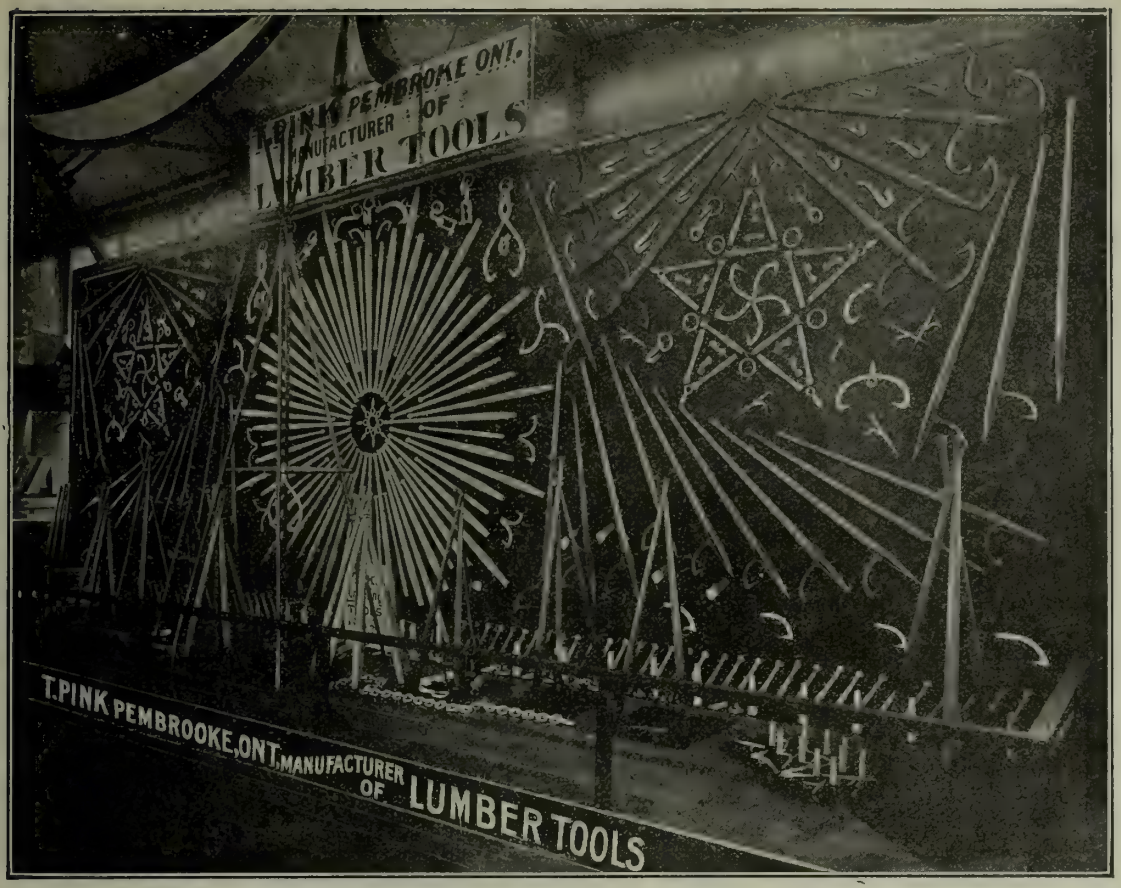
EVERY TOOL GUARANTEED

THE "FAVORITE" CHURN

is a good one every way you look at it. The barrel is of thoroughly seasoned hardwood, with trunnions balance bolted on. Stand is angle steel, very light, perfectly rigid and very strong. Has a most convenient hand and foot drive, and roller bearings for easy running. It easily BEATS ALL OTHER CHURNS in Canada as a seller. In fact, more "Favorites" are sold than all others combined. It's the churn that will pay you best. 8 sizes, to churn one-half to 30 gallons of cream.

David Maxwell & Sons, St. Mary's, Ont.

Large Profits—No Trouble to Sell



These are certainly the soundest of reasons why you should give greater attention to metallic ceilings and walls. If you are handling the

McFARLANE AND DOUGLAS LINE

you'll be surprised at the profits you can make. McFarlane and Douglas metal ceilings and walls appeal to your customers on many grounds. They are fire-proof, easily cleaned, will never fall down like plaster ceilings do, and they certainly are more beautiful in appearance and more durable than any other kind. **Write us for Catalog and Trade Prices.**

McFarlane & Douglas, Limited, Ottawa, Canada

Pink's Lumbering Tools

Made in Canada

The Standard Tools in every province of the Dominion, New Zealand, Australia, Etc.

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

Amatite ROOFING

When a man is under the necessity of using a lot of roofing, he is pretty sure to study the subject with great care.

That is why Amatite is so often used on the big ready-roofing contracts.

A man who has only a few hundred feet of roof will often be careless in his choice of roofing, but when it comes to thousands of square feet Amatite is sure to be used.

The following is a typical instance:

Buy It—and You'll Never Need Roof Paint

Paterson Manufacturing Company.

Dear Sirs:—We wish to inform you that the "Amatite" Roofing which we have used on our office, storehouse, lumber shed and barn has given most satisfactory service.

The area that these roofs cover is about 15,000 square feet. The roofing is unusually attractive in appearance, and in our judgment is the most durable and satisfactory made. The fact that it requires no painting appeals to us very strongly, and this feature makes it by far the cheapest ready roofing on the market.

CITY LUMBER & COAL COMPANY.
[Signed] F B. Boardman, Treasurer.

The economy of Amatite is not only in its durability and its price (lower than any other mineral surfaced ready roofing on the market), but also in the fact that *it requires no painting.*

You may be sure it would cost something to paint their big roofs if they used a roofing that needed painting. All that is saved with Amatite.

A sample of Amatite will be sent you for inspection free if you will send name to the nearest Paterson office at once.

The Paterson Manufacturing Company, Ltd., Montreal, Vancouver, Toronto, St. John, N.B., Winnipeg, Halifax, N.S.

Think What it Means to You!

CLAUSS GOODS have created a demand for themselves.

1. By the large and systematic consumer advertising throughout the North American Continent.

2. By the unconditional guarantee they give with every article of their manufacture. And remember the **CLAUSS SHEAR COMPANY** manufacture the most complete line of cutlery in the world. Write for catalogue and further details.

Cut from Heel to Point Perfectly Nickel-Plated.

The "Made in Canada" Rifle

The plant in which the Ross Rifles are made in Quebec City represents an investment of over $100,000,00.

The Ross Sporting and the Ross Military Rifles are to-day unbeaten in their class and unequalled in their quality and value.

Dealers who take a pride in Canadian Manufacturers and prefer helping Canadian to foreign and at the same time sell goods of unequalled value can unhesitatingly stock a supply of Ross Rifles.

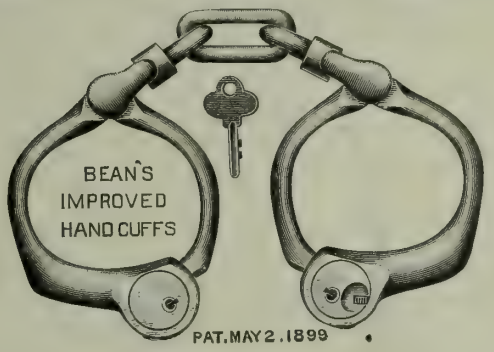
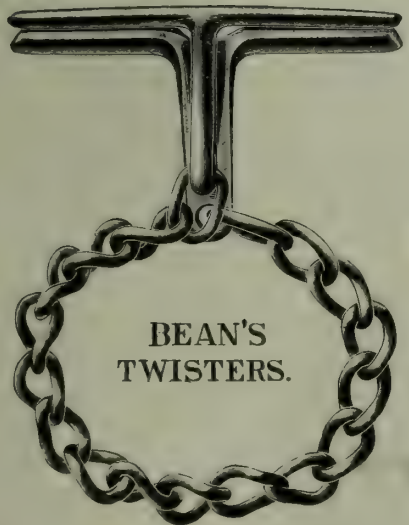
POLICE GOODS



Bean's Improved Leg-Irons

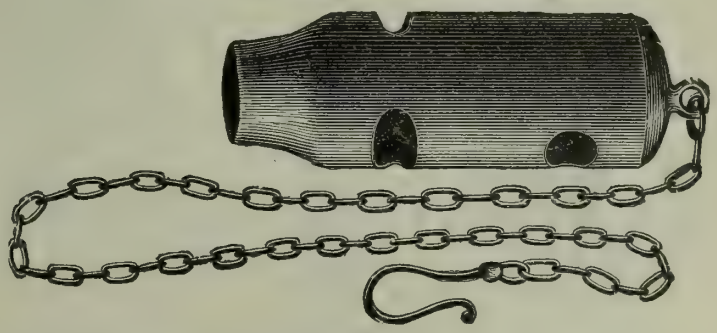
One pair in a box.

These Leg-Irons can be unlocked from either side, and the **lock can be removed for repairs** when the leg-iron is open, but when the leg-iron is closed the lock cannot be taken out. It has a double-swivel link, and there are no projecting arms, and no corners that can cut either officer or prisoner. The leg-iron is light, its weight being **21 ounces**. They have set locks and cannot be locked by accident, are always under control of the officer, and **cannot be unlocked without the key.**



Bean's Improved Handcuffs

These Handcuffs are made to meet the demand for a handcuff of a higher quality, a lighter and better-finished cuff. This cuff can be unlocked from either side, and **the lock can be removed for repairs** when the cuff is open, but when the cuff is closed the lock cannot be taken out. It has a double-swivel link, and there are no projecting arms, and no corners that can cut either officer or prisoner. The cuff is light, its weight being **12 ounces**. They have set locks and cannot be locked by accident. They fit **all** sizes of wrists, and are always under control of the officer, and **cannot be unlocked without the key.**



One pair in a box.

Bean's Improved Twisters

The above cut illustrates the Bean Improved Twister. The twisters are well polished and finely nickel-plated, and will stand the strain which any officer may wish to use.

Police Calls

BEAN'S, with 12-inch chain and hook, nickel-plated

One dozen in a box.

Sole-Leather Clubs

12-OUNCE BEAN'S—12 inches long, sole-leather butt, neatly braided leather handle, rawhide loop, iron swivel in head.

Police Goods are not usually carried in stock by Hardware Jobbers. This advertisement will serve to let you know where you can get them.

Products That Sell In The Winter

Get ready for winter, before winter gets ready for you. Right now is the time to prepare for the demand—before the demand arises. No use in waiting until you have to turn customers away. Get ready **NOW.**

The demand for Clark Heaters is beginning. In every carriage, wagon, sleigh and automobile is a place for a Clark Heater.

The public will naturally ask for "Clark's," because they are made from best materials, have no soldered joints, no screws to get loose. Every joint is solidly riveted.

Clark Heaters and Clark Coal

Clark Coal is a profit paying proposition. Unquestionably the King of Heater Fuels. We guarantee it to produce 25 per cent more heat than any other fuel made. Customers **buy** this coal—guarantee or no guarantee. ABC Coal is our second grade fuel. Guaranteed to be the equal of any made—excepting our Clark Coal. Prices are interesting.

Jobbers sell these—or write for 1908-1909 Catalog.

DISSTON PROGRESS

1840. Henry Disston made but *few* saws a day.

1850. Made *some* dozens each of various kinds of saws per day.

1860. **The Disston Saw Works** turned out *hundreds of dozens* of saws per week.
1865. Factory destroyed by fire—rebuilt immediately.

1870. Sales increased to *thousands of dozens* per month. Factory again destroyed by fire and rebuilt.

1880. Mounted up to *tens of thousands of dozens* per month.

1890. Leaped to *hundreds of thousands of dozens* per year.

1900. *Millions* of saws of various patterns were made and *sold*.

1910. **Sales still increasing and the demand for Disston brand of saws and tools unprecedented.**

THE R ESONS: Integrity, persistence, courage, enterprise, knowledge, all united in a constant effort to manufacture and deliver the *best* saws for every purpose which it lies within human power to produce.

ONEIDA COMMUNITY, LTD., ~ ~ ONEIDA, N.Y.

Stanley Tools

STANLEY "HURWOOD" SCREW DRIVERS have Blade, Shank and Head formed of one piece of special steel. A rivet through the Ferrule Handle and Shank, as well as the Head, with two projecting wings (see cut) securely fastens the Handle. This construction makes the "Hurwood" Driver unsurpassed for strength and durability. "Hurwood" Drivers are made in two forms: one in which the Metal Head comes clear through the Handle, and one designed for electricians, giving the same advantages of strength, but having the Head countersunk in the Handle and insulated by non-conducting plug. All "Hurwood" Drivers have finely tempered Blades, and are well finished and fully warranted.

We are now prepared to ship from our CANADIAN WORKS our complete line of Iron and Wood Bench Planes, Block Planes, Bit Braces, Spoke Shaves and Pocket Levels and, as fast as practicable, to these will be added other lines of tools shown in our catalogue.

The word "STANLEY" appears on every tool.

Jewel Stoves and Ranges
Jewel Heating Stoves

This is the time dealers are placing their orders for Heating Stoves. The Fall rush will soon be on, when everybody will want stoves.

The Ideal Jewel shown here is probably the handsomest Heating Stove made in Canada. It is a Self-Feeding Base Burner and Double Heater that works perfectly and gives a great amount of heat with a small consumption of fuel.

We manufacture Heating Stoves of all kinds for Hard or Soft Coal or Wood. Some of them are the Modern Jewel, Acme Jewel, Quebec Jewel, Standard Jewel, Grand Jewel and Jewel Oak, for coal. Also the Jewel Triple Heater, Little Giant, Sunlight and Hickory Box, for wood.

H&R ARMS CO

¶ Right in every hardware store is the most logical place for a line of reliable, accurate, and moderate-priced single guns.

¶ For ridding premises of pests—snakes, rats, 'chucks and the many kinds of crop and poultry destroyers, the Harrington & Richardson single gunsare specially suited.

¶ There is a large and growing demand for an economical and efficient weapon for just that purpose, as well as for occasional hunting.

Here's the gun:

TRADE H&R ARMS CO. MARK

TRADE H&R ARMS CO. MARK

Specifications, 12 to 28 gauge—26 to 32 inch barrel—ejecting or non-ejecting—fine black walnut stock—hard rubber butt plate—weight 5¾ to 6½ lbs., according to gauge and barrel. For black or smokeless powder.

¶ These guns are quick sellers. They are made and sold under the broad H. & R. guarantee of quality, reliability and satisfaction. With a few of these H. & R. guns in stock, the hardware dealer is equipped for a profitable and increasing trade.

Our 40-page catalogue is yours for the asking. It contains valuable selling points for every hardware dealer and shows the complete H. & R. line. Ask for it now while you think of it.

Harrington & Richardson Arms Co., 715 Park Avenue, Worcester, Mass.

Do Your Customers Burn Soft Coal?

If they do you have no doubt heard of their troubles with the ordinary heater, a heater not suited to the demands of soft coal.

Sofco Heater, patented Dec. 14th, 1906

Here is an illustration of the "Sofco" Heater—built especially for soft coal districts.

This is a smoke and gas consumer, the only method by which soft coal can be burned successfully.

Soft coal is a good fuel if it is harnessed correctly, and many more people would use it than at present if they knew of the "Sofco."

The "Sofco" is a tested heater backed by The McClary Mfg. Co. There is business in it for you, if you will go after it.

Order to-day.

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

How We Are Specialists

Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

"Our Plan"

We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.

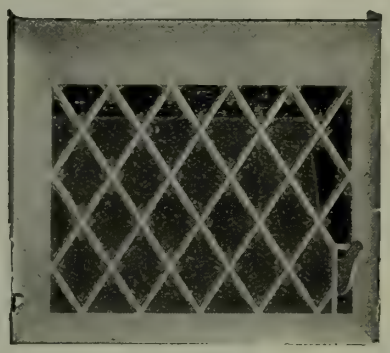
We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.

MALLEABLE IRON RANGE CO.

Beaver Dam, Wisconsin

IMPERIAL OXFORD RANGE

"100" SERIES



One of the prime favorites from the Gurney-Oxford line. Being featured in our advertising throughout all Canada.

Read these special good points—which appeal to every user of a cast iron range.

1. The new Imperial for coal has our new Patented reversible grate, with interlocking teeth. It has much more air space, producing the greatest amount of heat for fuel consumed.
2. The fire travel is directed so that half the heat must travel around the front of the oven. This does away with the old difficulty of range ovens, where most of the heat is usually at the back.
3. The firebox is oval No dead corners for clinkers to lodge in.
4. All fire linings and grates are removable without disturbing anything else. If your customer wants to burn wood part of the time, show him how quickly the change can be made. Wood firebox takes a 24-inch stick.
5. Large pouch feed door for broiling.
6. All the nickel lifts off, a great convenience when the range is required for heavy work, preserving, wash day, etc.
7. The satiny castings and the detachable nickel rims make this range an ornament to any kitchen.
8. A new device for removing ashes. No necessity of spilling ashes on the floor as with the old pull-out hearth. Extra large ash pan.
9. Gas attachment where desired.
10. Extra commodious blue steel warming closet with drop door, or high shelf as desired.
11. Two-piece never warp covers, sectional ring cover, and interlocked centres on top.
12. Oven thermometer perfectly accurate. Very simple. Nothing to get out of order or to wear out.

The Value of Quality

The modern understanding of the word QUALITY, according to the Standard Dictionary, is SUPERIORITY.

QUALITY also implies MERIT, GENUINE WORTH. It suggests INDIVIDUALITY. It embod es CLASS, and sets a STANDARD.

QUALITY in our goods is the result of the union of the BEST MATERIAL obtainable, the WIDEST EXPERIENCE, the LARGEST FACILITIES, and the MOST APPROVED METHODS.

The foregoing have placed us in the FRONT RANK as manufacturers of goods of STERLING MERIT.

Every dealer should hustle the ST. MARYS HOCKEY STICK, because it looks well, sells well, and lasts well.

FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

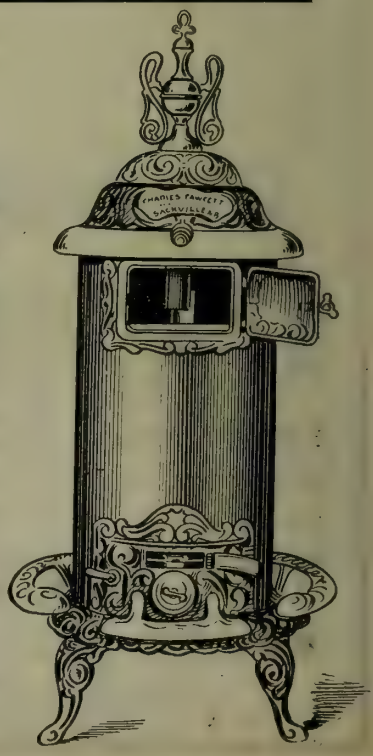
Easy to operate—Easy to sell



The latest triumphs in Fuel Saving and Heating Stoves are the two illustrated. The

"CHARM OAK" and "PERFECT HOT BLAST"

(on left) (on right)

In the "Charm Oak" a special construction does away with the smoke nuisance at the door so common in the Oak stove, and this stove is designed upon the latest lines for convenience and economy.

The "Perfect Hot Blast" is the latest and most up-to-date hot blast and smoke consumer on the market. It has extra large radiating surface and improved ash pit, shaking door and air-tight construction.

FAWCETT RANGES were awarded a Diploma and Gold Medal at the Dominion Exhibition at St. John this month.

They are pre-eminent for cooking qualities, durability and heating power.

Moreover, there is a splendid profit for the dealer handling Fawcett Stoves and Ranges. Send for catalogue and details.

A Credit Men's Association Formed in the West

The Members Claim it is for the Purpose of Protecting the Honest Wholesaler and retailer—Prosecution of Fraudulent Debtors and Trade Clearing House and Adjustment Bureau Among its Stated Aims — To Encourage Fire Insurance Among Retailers as Well as Proper Book-keeping and the Taking of Cash Discounts.

Winnipeg, Sept. 28.—A body has been recently organized in Winnipeg called The Canadian Credit Men's Association, which according to the constitution is for the purpose of "improving existing credit methods through the co-operation on individuals engaged in extending credit, and such other matters as the members may from time to time determine."

The membership consists of credit men and general managers engaged in any legitimate line of business where credits are given.

It has already assumed large proportions, as the list of members testifies, being made up practically of the representatives of all the larger wholesale houses in Winnipeg, and of those houses in Montreal, Toronto and other eastern cities which are doing any considerable business in the Western Provinces.

The association has opened offices in Winnipeg, under the management of a president, vice-president, six members acting as a board of governors, and a secretary-treasurer. The officers are :

President—H. H. Piggott, (The J. H. Ashdown Hdw. Co.)

Vice-President—R. R. Wilson, (Campbell Bros. & Wilson).

Board of Governors—W. M. Boyd, (The International Harvester Co.) ; J. D. Burnham, (Stobart, Sons & Co.) ; W. S. Fallis, (The Sherwin-Williams Co.) ; A. McAllister, (The W. E. Sanford Mfg. Co.) ; T. D. McGee, (The Thos. Ryan Co.) ; B. C. McMillan, (The McClary Mfg. Co.)

Secretary-Treasurer—Henry Detchon.

Questions on the Slate.

Strong committees have been formed to take up the following subjects :

Legislation Affecting Business Conditions ;
Prosecution of Fraudulent Debtors ;
Improved Mercantile Agency Service ;
Trade Clearing House and Adjustment Bureau ;
Fire Insurance ;
Improved Credit Dept. Methods.

The association has already in hand various questions affecting legislation which will be brought before the proper quarters when ready to be submitted.

It has also taken up one or two cases of fraud, but as these are still undecided by the courts, it is impossible to comment on same.

A Clearing House has been established for the interchange by members of ledger information. This feature of the association is really an enlargement of the Clearing House Department lately carried on by the Winnipeg Jobbers' Credit Clearing House. This branch of the latter concern, however, has now been merged into the new association and strengthened by the addition of a large list of new members ; the Clearing House Department now affords information from no less than 136 wholesale ledgers. This is done so that members by giving their own ledger information, can now fairly accurately appraise the exact position of those with whom they are doing business, and judge pretty well the desirability or otherwise of extending credit to any particular person.

To Encourage Fire Insurance.

The question of fire insurance is also an important matter being dealt with by the committee appointed for the purpose. The desirability of a merchant keeping fully insured against loss by fire will be brought forcibly before the attention of the retailers by means of educational literature, and the association will investigate any cases brought before its notice of alleged overcharge in rates and delays in adjustments of fire losses.

The improvement in the methods at present adopted in wholesale houses in dealing with credit matters is likewise engaging the attention of the association, and uniformity in these methods tending to curtailment of work for both the retailer and the credit man is being sought. As an example, in the past each wholesale house has adopted its own financial statement form, to be filled in by the customer seeking credit, but now the association has adopted a uniform form, which will materially diminish the work of both customer and wholesaler. These forms have been printed in large quantities and are being sold at actual cost to the members.

In addition to bringing before the retail merchants the question of insurance, such matters as rendering correct yearly statements to the mercantile agencies and wholesalers, keeping proper books of account, taking cash discounts, and other important features will be gradually brought into prominence.

Claims to Aid Honest Retailers.

While on the face of it, the association has been formed among wholesalers for the protection of wholesalers, the members claim that it will materially assist and protect the honest retailers by driving the dishonest and fraudulent merchant out of business, and thus affording a better field for the operations of those merchants who are honestly endeavoring to gain a competence by hard and industrious trading.

After Unscrupulous Persons.

At the meeting of the association on September 14th, it was decided to start a fund for the purpose of prosecuting unscrupulous persons. President Piggot presided, and was supported by R. R. Wilson, vice-president.

A desire was expressed for a higher state of efficiency in mercantile services, and a determination to obtain more up to date information, to be the means of harmonious co-operation between the members of the association and the agents supplying the information.

The report was read from the Legislation Committee, respecting the necessity of further legislation governing the obtaining of credit by means of fraudulent statements submitted to the mercantile agents.

Where Retailers Claim Shortages.

Complaints were lodged by the members for the unjust claims of shortage made by the retailers, and it was decided to take action to minimize this as much as possible. The Legislation Committee also referred to the issuance of cheques on banks where no funds were in deposit to cover such cheques at the time they were issued. This was felt to be a serious question to be dealt with at once, as there were many such cases in the west, it was declared, where this kind of thing is being carried on.

These matters are receiving the attening of the Legislation Committee, and they expect to be able to make reports at an early meeting.

Financial Statement Forms.

The secretary reported that the uniform financial statement forms which were adopted by the association at a previous meeting were now being used largely by the members, who issue them free of charge to their customers. He expressed the opinion that before the end of this year, these forms will have replaced the old forms now in use, and a much needed change would be brought about which would undoubtedly bring better relationship between the credit men and their customers.

The Clearing House Committee reported an increase in membership. This committee has for its object the collecting from, and the distributing amongst the members of the committee ledger information of mutual accounts, and the value of this information has come to be recognized in deciding where credit should be given.

To Hold Monthly Meetings.

It was decided to hold a monthly luncheon of the association on the second Wednesday of each month at 6.30 p.m.

Secretary Detchon is now interviewing the wholesale trade in Western Canada, with a view to getting co-operation in the general work of the association.

The following members took part in the discussion : W. M. Boyd, W. L. Helliwell, D. C. McMillan, M. F. Christie, M. S. Fallis, A. H. Fergusson, E. I. Madigan, A. McAllister, E. Barry, W. S. Arnold, J. Campbell, T. W. Leary and Mr. Webb.

Lighting Fixtures as a Side Line for Hardwaremen

Goods Combine Well With the Rest of the Hardware Stock, and Help in the General Display—Fixtures and Accessories are Clean and Handy Lines to Carry—Window Display Stimulate a Demand—The Lines Must be Well Brought Forward —Be Ready for any Demand for Lighting Fixtures That May be Likely to Spring up.

Lighting fixtures have this advantage over many side lines that hardwaremen now carry, that they combine well with the other stock. For instance, the sale of an electric or gas fixture may mean the sale of wire, screws, screw driver, probably pliers and one or two other little odds and ends. All these are supplied by the merchant so that the customer has no trouble of going to two or three stores in order to start putting up his fixtures. Then again lighting lines of to-day are exceedingly handsome in appearance. The clumsy outlines of olden days are gone, and now very little is produced that is not artistic and light. So that the merchant displaying fixtures adds to the ornateness of his interior while adding to the sources whereby he can pull in more revenue. Nothing looks more attractive than a series of fixtures arranged either in the window or in a prominent location in the interior, especially if these fixtures are connected with the main and in the evening become illuminated with the rest of the other lights. The criticism is frequently heard that hardwaremen do not illuminate their stores sufficiently, and comparison is made with the departmental stores and other trades greatly to the disadvantage of the hardwareman. If the merchant utilized his fixtures not only as a means of creating a demand for those fixtures, but also as a means of helping towards the general illumination of his store it would tend to do away with these invidious comparisons.

One Line Helps Another.

In these days of competition the merchant must be on the look out to secure all the trade that he can possibly squeeze out of his district. He must remember that, barring the expenditure on the stock itself, any side lines he introduces cause no more expense to the general upkeep of the establishment. There is no need of his adding to his staff, and the overhead expenses are in no way augmented. Therefore, the side lines that carries with it a trade which has every prospect of being greatly developed is a most profitable undertaking for the merchant, not only is there the demand for this side line itself to be considered, but there is the great possibility of people who would not otherwise enter the store coming in with the purpose of buying this particular side line and of then seeing other things which they like. An instance occurred to illustrate this the other day. The writer was in a hardware store which is now making a strong feature of electrical fixtures when a customer—a new face to the merchant—entered the store and asked for a small socket. On purchasing the socket he was on the point of leaving the store when his eye fell upon a particularly neat looking hand drill. "That is a nice tool," he said, and so the merchant at once with true salesmanlike celerity proceeded to show the observer the merits of this drill and the reasons why the customer should have that drill before he was any days older. Eventually a sale was effected, and as the merchant truly remarked to the writer, "if it had not been for my electrical side lines I should not have sold that drill." The more side lines the merchant has the greater are the chances of such instances like this occurring, and although the dealer must be careful that he does not in a moment of enthusiasm overstock himself, it is wise for every man to look out and try everything that he thinks will attract customers to his store.

Clean Lines to Handle.

Light fixtures are nice clean lines to handle. They carry a fair profit and

Demonstrating Gas Fixtures.

will repay all the trouble that they entail upon the merchant. There are very few districts in which there is no demand either existing or capable of being worked up for electrical or gas fixtures, and it is astonishing how easily a demand can be stimulated by means of window displays. Many instances can be given, if it were necessary, of how this has been done even in a locality which seemed at first appearance to offer little opportunity for a demand, by means of a strong series of window displays. A case comes readily to the mind of a merchant who, although he had never been asked for an electrical fixture, decided that there was no reason why he should not try and stimulate a call. His district could not be described as being an exceedingly promising one although it was in a municipality in which there was electric lighting. He decided to stock some wire, cutouts, sockets, fuses, lamps, shades and he ran an electrical window off and on for three months. The first two or three weeks no trade resulted, although he noticed that more people seemed to look into his window than had done so before. But one day the tide seemed to turn. An order for some wire was followed by a customer suddenly rushing in for some fuses as his had been blown out by a slight trouble on the line, and then the merchant woke up one morning to find that his electrical trade had assumed as big a dimension as his paint trade, and this latter was by no means inconsiderable. Now it seems to be even beating the other side lines, and this merchant assured the writer that under no consideration would he remain two weeks without having an electrical window.

Now if it is possible for one merchant to accomplish this it is possible for other merchants to follow suit. It is astonishing how a demand can be stimulated and directed into certain channels by consecutive and highly suggestive window displays. If a person never sees a thing he or she naturally does not want it. The old adage that "what the eye does not see the heart does not grieve for," is borne out in this. If, as in the case given above, the customer had not seen this little drill he would not have desired it, and if a district is not shown certain pretty fixtures or little conveniences that are constantly being put upon the market how can they be expected in the ordinary course of events to have a desire for them, or even to know that they exist.

The Occasional Window No Good.

An occasional window is not sufficient. You must have the accumulative force of a series so designed that they grip the attention more and more of the people who pass by. The great thing is to show the lines. There is no use adding to one's stock if no attempt is made to show the people that that stock has been augmented. A merchant on reading this may say, "Oh, I added a side line sometime back and it has been nothing but dead stock since. The great question is, did the merchant after adding this line do his very best to push it? Did he on every available occasion call his customers' attention to the fact that these lines were being carried? No matter how great the demand may be for a thing; no matter how cheap it may be; no matter what the quality behind it; it will not sell unless it is displayed. Even in a line such as paint which probably every one knows that a hardwareman carries, the full strength of the consumptive demand is not felt unless the merchant displays his brands. How is the observer to know that amongst the colors carried there is a smart moss green or gray which is particularly attractive, and would suit something in particular which the observer has in mind. More so therefore is the display necessary in the case of the side line which probably very few of the people in the district are aware that the merchant has stocked.

Hardware and Metal Subscribers' Letter Box

Any Question on Trade Subjects Will be Answered by the Editor in This Department. Do You Want Any Address, Any Special Line of Goods, Anything Relating to the Hardware Trade? If Inquiry is of a Nature That the Correspondent Does Not Desire Publicity, he Can Use Initials or Nom de Plume.

Personal Letter to Customers.—William Marshall, Milk River, Alberta, writes: "In reading your valuable trade paper I noticed your invitation to send advertisements for criticism. I am taking the liberty of sending you for your perusal and criticism a personal letter that I purpose to send out to our customers and others in this vicinity. In the first place, I must inform you that we have no local paper in which to advertise. Secondly, things in general are pretty quiet around this district, owing to the dry weather we have had here, so I intend to try and liven the business up if possible, with a strong line of Christmas goods that we are able to procure from our wholesale house, or rather, the firm that we deal with. We have no jeweller here, and I think that the plan ought to go pretty good. The country tributary to this town extends for about 60 miles east and is all homestead country. The town itself has a population of not more than one hundred. We carry a stock of about $5,000, and also a line of implements. At times I think that it is a somewhat risky procedure to stock up too heavy on these fancy goods. If it is not taking up too much of your valuable time I would greatly prize your advice in this matter of the enclosed letter."

Mrs. James Jones,
Milk River, Alta.,

Dear Madam,—Just a few lines to call your attention to the fact that we are laying in a choice variety of novelties and useful articles for the coming Christmas trade.

We shall be pleased to have you call on us on your next trip to town, and inspect these goods, and we will do our very best to accommodate you and to supply your needs in the way of suitable and acceptable Christmas presents to send to your friends at home. We shall also be pleased to render you any assistance you may need in packing these goods and mailing the same.

As we anticipate a rush for these goods we would advise an early visit so that you may have the benefit of an early choice.

If we do not happen to have what you may need in this line at the time of your visit, we will do our utmost to procure anything that is in our line for you without delay.

Trusting to see you in the near future, and thanking you in anticipation, we remain,

Yours respectfully,
O. FITZMAURICE,
Per William Marshall.

Mr. Marshall's letter is an excellent introduction to the subject of holiday trade, and if followed up with two or three other letters during October and November, the results are certain to be very gratifying.

There is nothing like personal contact between merchant and customer, and this is where the local merchant has his greatest advantage over the mail order houses. In a follow-up letter, therefore, the point might be emphasized that it is in the customer's interest to help build up the town near which he or she lives, first, because of the increased value of the country land, if near a town, and second, because of the greater opportunity for social entertainment and better buying facilities as the town grows. These arguments should be backed up, however, by proof that the local store can serve the customer even better than the catalogue house by selling from sample, instead of from a picture, and, freight considered, for even lower prices. Emphasize this paint by picking out two or three articles listed in the mail order catalogue, add freight, money order fee, etc., and compare with your local price. If possible, offer to duplicate any article catalogued, and promise to exchange the goods if not satisfactory. A letter along this line will establish confidence and help trade in all departments of your store. And it is safe to say that no loss will be incurred by the offer to duplicate catalogue house goods or exchange articles sold over the counter.

A third letter should contain practical suggestions for gifts to father, mother, sister, brother, the baby, and to friends at a distance. In a western farm home there are many household articles, such as lamps, cutlery, cooking utensils, labor-saving washing machines, etc., which will appeal as good holiday gifts. These, and such lines as safety razors, mirrors, skates, pocket knives, etc., should be suggested and prices quoted, just as they would be in a newspaper ad. Then an invitation to visit the store before the goods are picked over and an offer to hold any articles until the holidays could be added as a closing paragraph.

Mr. Marshall's plan is an excellent one, and if his follow-up letters are written in the same style as the first they will interest customers and sell a lot of goods. No attempt should be made to adopt anything but a natural style in personal letters or advertising matter. Write as you would talk over the counter and you won't go far wrong. Be natural and you will convince customers of your sincerity more than by making extravagant statements about this being "the greatest sale ever."

Hardware and Metal would like to hear from other merchants who have adopted similar plans to push holiday goods.—Editor.

Folding Baths.—Henry Giles, St. Jacobs, asks who manufactures rubber folding baths.

J. J. Turner & Sons, Peterboro', and the Folding Bath Manufacturing Co., Hamilton.—Editor.

Creamatory Closets— W. H. Kennedy. Alisa Craig, Ont., asks for the names of manufacturers of creamatory closets.

There is a creamatory closet on the market but Hardware and Metal cannot locate the manufacturer. The dry earth closet seems to be more popular for summer resorts and country houses. Two types of these are made by the Toronto Furnace & Creamatory Co., Toronto, and Kendrick & Co., Simcoe, Ont. The latter firm was referred to as Selkirk & Co. in Hardware and Metal last week owing to a typographical error.—Editor.

New Canadian Industry—Pow & Wilcox, Tillsonburg, ask what chances there are in Canada for a concern manufacturing portable forges, small drill presses, anvils, hammers, tongs and small tools. If there is a market for another concern in Canada making these goods Tillsonburg may secure the industry.

While there are firms in Canada making all of these lines there are also large quantities imported and if a new company entered the Canadian field and adopted a progressive selling campaign, with modern advertising methods, they ought to be able to capture much of the trade now going to foreign manufacturers.—Editor.

Advertising Specialties — A. F. H., Grimsby, asks us to place an order for him for a supply of yardsticks containing his ad. for distribution at the local fair.

Hardware and Metal is always willing to oblige readers by commissions of this kind. With our own offices in Montreal, Toronto, Winnipeg and Vancouver, our staff is able to locate firms whose addresses readers have mislaid or forgotten. —Editor.

Bargain Counter Goods.—R. H. Bradfield & Co., Morrisburg, asks where he can buy goods suitable for five and ten cent counters in hardware stores.

The hardware jobbers can supply many small wares and can assemble a large variety if required. Tinware, wire and lighting goods houses, such as the Kemp Mfg. Co., Toronto; McClary Manufacturing Co., London, Thomas Davidson Manufacturing Co., Montreal, E. T. Wright & Co., Hamilton, Ontario Lamp & Lantern Co., Hamilton, Rochester Lamp Co., Toronto, Canada Wire Goods Manufacturing Co., Hamilton, can help to make up a variety of salable goods to which can be added some of the staple lines and specialties marketed by paint and brush manufacturers.—Editor.

PUBLISHED EVERY SATURDAY.

A HELP TO RETAILERS.

A department of Hardware and Metal which has developed a great deal of interest amongst subscribers is the "Letter Box" column. A whole page is taken up in this issue and if indications are not misleading a page will be none too large a space in succeeding issues.

To retailers who desire to branch out by adding new departments, or to get in touch with manufacturers who market lines not usually carried by jobbing houses, or to readers who are confronted with any question or problem to which a ready answer is not available, the "Letter Box" offers a solution.

Merchants, bookkeepers, clerks, travellers, in fact anyone connected with the hardware trade, are invited to send letters for publication in the "Letter Box." Questions may be asked or comments made on any question already discussed or affecting the trade.

ADVANCE THE PRICE.

There should be no hesitancy upon the part of hardwaremen to advance the price of ready-mixed paints, following the recent advances made by manufacturers, as a result of the higher prices of raw material, due to shortage in crops.

Linseed oil is now double the price ruling two or three years ago, but the advance has been gradual and due to purely natural causes. And it is almost certain that higher prices will prevail during the coming year. White lead and turpentine, too, are advancing in price, with no apparent prospect of the market weakening.

If paint was a luxury, the price would have been advanced long ago. But it is a necessary staple, like sugar and wire nails, and the low prices on white lead has always kept the price of paint down to such a low point that dealers seem to consider it necessary to apologize if prices advance.

At one time people merely painted the fronts of their houses for decorative purposes, thinking they could not afford to paint the sides and rear. But the painted parts were found to be more durable than the unpainted parts, so paint became recognized as a necessity rather than a luxury.

People do not use less sugar when sugar advances in price, and the same applies to paint. Consequently, having come to the conclusion that the advance in price is warranted, the thing to do is to advance prices without delay, so that goods can be sold at their market value.

And when advancing prices the figures should be marked up sufficiently high to cover the advance in cost and retain the margin of profit previously obtained. For instance, where wholesale prices advance ten per cent., an advance of ten per cent. to the retail price leaves the retailer with a smaller margin of profit, whereas his cost of doing business is slightly increased, owing to the larger investment in stock.

Be fair to yourself and your competitor by advancing the price when the market warrants higher prices.

DEALERS SHOULD CO-OPERATE.

In a town in eastern Ontario two new schools are to be erected, and the contract for hardware will amount to a respectable sum. But it is said that the specifications are drawn up in such a way that the four local hardwaremen have a much poorer chance of securing the contract than a big Toronto hardware firm which makes a specialty of builders' hardware.

Here is a chance for the four local hardwaremen to get together and by presenting their case as ratepayers and their right to be placed on an equal footing with outside firms to have the objectionable features of the specifications stricken out. Whether the contract is handled individually or in a combined tender the local hardwaremen should use every effort to secure the business.

And the incident should be taken advantage of by the hardwaremen to get better acquainted and work together. The town is big enough for all and there is no sane reason for the various hardwaremen to be on anything but friendly terms. Yet there are men who have been doing a hardware business in the town for years who do not speak to each other—who pass each other on the street without a nod or friendly glance.

It pays to be on good terms with fellow business men, to carry the gospel of brotherhood into business, as well as home and religious life. It pays to think well of your neighbor and be well thought of by him, pays both in the satisfaction of mind and the profits resulting from friendly rather than unfriendly competition.

HEALTHY TRADE CONDITIONS.

Concurrent with the opening of the fall trade a very healthy financial condition is apparent throughout the country. In fact, seldom have prospects looked so favorable, not only for a good consumptive demand, but for a free circulation of money, so that trade can flow through its proper channels without any hitch in its progress. Not only are farmers collectively in very good spirits, for they now can tell approximately what their revenue will be from their harvest, but the banks feel that the country's finances and industrial conditions are in a very much stronger state, and are not so insistent upon gilt-edged securities, lending money more readily than they did. It is true that the old days of advancing money with very little regard to the strength of the proposition have gone by, and all the better so, but the financial institutions have withdrawn from the extreme course which they took after the panic of 1907, and are much more inclined to finance good commercial propositions.

In every direction there are signs that the financial strength of the country is at high-water mark. The various industrial concerns all report exceedingly good business. Various manufacturers state that their plants are working at full pressure, while, added to this there is a firm feeling all the way around that prospects were never better. Prices generally are exceedingly firm, and yet are not too high, and there seems to be a strong desire on the part of those responsible for the marketing of all goods not to disturb the consumptive demand more than can be helped by any advance in prices.

With conditions as they are, the consumer feels that he cannot only purchase with assurance the necessities that he and his family desire, but also many little luxuries he has denied himself in the past. The consumer generally spends freely when he has the money and believes that there are no hard times in front of him. The farmer, the industrial worker, the commercial man, all feel that they can at the present moment spend money freely to secure the necessities and luxuries which add so much to their material comfort.

At the same time, from reports which we have obtained, collections are coming in very well, indeed. Not only the jobbers, but the retailers, state that their clients pay their bills much more readily than they did, and that the general feeling of security as to future conditions

promises that money will come in even more freely in the future. One merchant stated that this time, compared with last year, he had less than one-third the number on his books, owing over $5, and that whereas at one time some delinquents required three or four letters and a very threatening one at the end to make them pay up what they justly owed, one letter now, or at the least two, seemed sufficient. Thus with money circulating well, the consumer, confident as to the future, was buying much more freely, and with bad debts being whittled down, the fall of 1910 has opened must auspiciously.

Retailer's Position in Credit Men's Movement

This New Association is Raising a Fund of $10,000 for the Prosecution of Fraudulent Debtors---Retailers' Opinions are Desirable---Important Items for His Consideration, such as Making Out Financial Statements to Mercantile Houses, Buying and Taking Discounts.

The action of the Canadian Credit Men's Association, with head-quarters in Winnipeg, in obtaining definite plans for the betterment of the wholesale conditions, supplies food for serious thinking on the part of all retail merchants in the country, and particularly in Western Canada. The stated purposes and aims of the Association are set forth in an article on another page of this issue and should be read with interest.

The point which, perhaps, is most interesting, is that the body have started a fund amounting to $10,000 (which will be increased according to requirements) for the prosecution of fraudulent debtors and unscrupulous persons. It is evidently the purpose of the association to secure recompense and punish wherever possible, those who issue fraudulent financial statements and issue worthless checks to creditors.

It would seem that our legislative facilities were much lacking, when a body which claims to be suffering from criminal actions on the part of debtors, are compelled to endeavor to have such laws enacted which will assist them to get redress. Just what the law is in this connection is not known but a committee has this matter in charge, and they are at present working out a definite line of policy. Not only would the sense of justice and honesty lead us to corroborate in a movement which makes for better business relationship, but the frank open manner in which the association are making the facts known, just as they are, deserves commendation.

The work as at present outlined by the association cannot be criticized from the standpoint of the retailer. A committee has been appointed to solve the legislation problem affecting business conditions. This simply means the prosecution of fraudulent debtors. If it means more than this, the facts will be, and ought to be made known to the retailer. To prosecute fraud, no retailer will object, and retail merchants everywhere hail with satisfaction such legislation as will clear their ranks of undesirables. To improve mercantile agency service, to establish a trade clearing house, and adjustment bureau, and to co-operate with the merchants to secure better fire insurance conditions, are all plans which are plainly constructive of a better commercial system.

It must be remembered, however, that to a certain extent the retail merchant should have a share in forming the plans for the future of the trade relationship between retail and wholesale merchants, between debtor and creditor. It is not the object of the Credit Men's Association to work out plans without the knowledge of the retailers. They welcome and invite consultation with the merchants as a body or as individuals, in making such changes as all alike must agree are necessary.

The wholesaler ought to be willing to admit that he himself may sometimes put a customer in an awkward position. He therefore must be careful whom he calls a fraudulent merchant. All merchants who fail to meet their accounts are not dishonest. The credit man is aware that the retailer should be concerned about direct legislation for his own benefit. But the wholesaler cannot do all the legislating. There are some things which the merchant himself must do in the matter of creating more secure business relationship with the wholesaler.

It is believed that the action of the Credit Men's Association will not only do much to benefit the retail trade either directly or indirectly, but will stimulate the merchants as a body to take action, for defence if need be, and in any case to better perfect the relationship between them.

It would seem that a sensible line of policy for the merchant to pursue would be to conduct his business in such a way so as to keep as far away as possible from the appearance or temptation of dishonesty. Many retailers could perhaps buy more carefully, and not allow themselves to be over-loaded with dead stock. Likewise the wholesaler might sell more carefully in order to keep away from trouble. But it is only reasonable that if anything serious ensues in the matter of quantity or stock, almost the entire blame should be laid at the door of the retailer. Again the merchant might endeavor to buy more directly for cash, which system would enable him to take his discount regularly.

These are only a few things that the retailer might do. It is to be hoped that the retailers as an association will co-operate with the wholesalers and as one seek to eliminate from the trade some of the present existing evils.

EXECUTING ONE'S PLANS.

It is a characteristic among men to be always going to do something. New hopes are formed and new castles ascend into the air but many are of the Spanish kind. The man who carries out his plans is generally a success while the other has something new almost every day or week but he never attempts to put anything into operation.

One is the man of imagination only, the other has not only the power to plan but he has the ability to execute. If a grocer gets an idea, the wisest course, if he has carefully studied the question, is to act upon it. Everything may not materialize as it is expected to do but when a merchant undertakes a scheme aggressively the disappointments are few and far between.

Act upon your plans; putting off until to-morrow is not a business principle.

MERCHANTS GOT TOGETHER.

A merchant tells the following story: "Not long ago, a family which has been trading with me for some time got offended because I asked them for the money they owed me. It amounted to $25. They transferred their business to another merchant in town. He came to me at once and asked me about them. I told him that they had owed me for nine months and when I asked for my money they quit. We both investigated and found they were not paying their bills. He shut down before his bill amounted to more than $3.00. They went to another, and he came to us and cut them off quickly. The family is running a bill in a small town several miles down the road now. We merchants get together and talk things over. Competition is good and active between us, but we believe in fair competition."—The Oregon Tradesman.

Personal magnetism rarely exists in the man with an unpleasant speaking voice. If your voice is not agreeable, train it.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKET BRIEFS.

Toronto.

Canada Plates—Advanced 15 cents.
American Coal Oil—Down ½c.
Spelter—Up ½c.

MONTREAL.

Sept. 30—There is little change in the metal market. Copper, while not altering in price responded to the slight sagging in New York, and was weaker in tone. Tin, smelter and lead were on the firm side. Bussiness is reported as being very good, and there is a disposisition on the part of the smaller users to buy more ahead in view of the higher freights later on. The firm tone in tin has caused large users to be chary of the markets, and the continued control of the situation in London by the bull party has somewhat upset calculations. There is no doubt, however, that large users are keeping back as long as they can in hopes of tin prices going back to their former level. The pig iron and steel situation in the States shows little change. There has been no severe slashing in steel prices as expected, and the market is on the quiet side at old figures. Pig iron prices are very soft, and agents in Canada are slashing figures considerably to get business. Domestic furnaces are reported to be pretty full up with contracts extending well into the new year. The situation in the Old Country seems about the same. Scotch grades are keping firm, and a slightly higher price is asked for future delivery.

Pig Iron—Business in imported iron is moving along briskly, and heavvy consignments will be coming into port before Nov. 20, or thereabouts. Prices are well maintained, and on Scotch grades a lightly higher figure is asked for future delivery. The low price obtaining in the States has caused some slashing to be done here, and agents are readily meeting buyers. This, while not affecting domestic business very much, is cutting somewhat into Old Country imported iron trade. Domestic furnaces report plenty of business on hand. We quote domestic—No. 1, $18 to 18.50; No. 2, $17.50, at furnace Middlesboro; No. 3, $18; Summerlee, No. 1, $20.50; No. 2, $20; No. 3, $19.50.

Tin—With the jobbing price maintained at 37c fair business has been done. The price is on the high side to many users after the much lower figures that they have been accustomed to lately, but as the metal is wanted orders must be placed. Some of the larger buyers are keeping back in anticipation of the bull party losing control in London and prices thus falling away, but it is not an easy matter to guess exactly what the London tin market will do. The operators have held up well even against consignments of tin being reshipped back to the Old Country.

Copper—Copper is somewhat softer in sympathy with New York, but no change is reported for jobbing lots, although good round orders get concessions. Trade is fairly good, and inquiries are slightly more numerous than they were. The situation in New York offers very little change. The market has its ups and downs, and is very susceptible to London speculative movements. At present it is experiencing a little backward movement. Buying is dull.

Spelter—Spelter is very firm, in sympathy with conditions in the primary markets. Trade is on the whole good, and some large sized orders have been placed. While St. Louis is practically stationary, London is showing higher figures, and the market is reported very firm with supplies held strongly. Higher local figures in spelter would not be surprising.

Lead—Lead is unchanged, both for domestic and imported. Trade is on the fair side with prices a little firmer than they have been. The English market has been showing higher figures, and the whole tone of the metal has improved.

Scrap—The market shows a better movement with buyers more numerous. We quote: Heavy copper wire, 11c; light copper bottoms, 9½c; heavy red brass, 8c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, $12; machinery scrap, No. 1, $16; stove plate $12.50; malleable, $9; miscellaneous steel, $5.

TORONTO.

Sept. 30.—Trading is improving gradually and steadily. The undertone of iron and steel in general is hopeful, though jobbers and agents are pressing for orders and business. Small-lot orders are increasing and inquiries are more plentiful. Prices might be more satisfactory, but everyone is looking into the future and that is showing up better.

The cut on pig iron a week ago has eased off the market and helped bring about lower quotations outside. Locally the situation in iron is better than at the opening of September, though the easier prices might not make one think so.

Canada plates are still slow in delivery. English makers are said to be engaged on orders on which there is greater profit, hence the delay in filling orders which should have been in consumers' hands on September 1. One metal man at least thinks it may be that this is the last year in which Canada plates will be made in England for export. If so Canadian dealers will have to arrange for their make here in Canada, as these plates are not made in the United States; or else large sized plates must be imported and cut down for Canadian consumption. Canada plates are stiffer in price, and spelter, too, is going higher.

Pig Iron.—The lower prices of last week have brought about better trading. Business improved over a week ago and much better than at the beginning of the month. Canadian furnaces are still pushing for orders. Local quotations hold at $19.50 for No. 1, and $19 for No. 2, f.o.b. furnace, with 50c a ton added for local delivery. Middlesboro No. 3 is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Jarrow is $20.50 and Glengarnock, $22.50.

Spelter.—This metal is again going up. The advanced price shows higher by at least ¼c, the quotation to-day standing at 6c to 6¼c per pound. Big sales and lowering supplies are responsible.

Sheets and Plates.—Shipments are almost nil and deliveries are delayed in consequence. The making of more profitable lines has ousted Canada plates from its foremost place. Stocks keep on lowering, so much so that the market has advanced prices 15 cents this week. Demand is good.

Tin.—Business has developed more steadiness with the freedom of supplies. There is an easier tendency to the market although holders keep the quotation at 37c. Some fair sized orders changed hands at 35c this week. Trading is good.

Lead.—Demand is increasing every day. In fact business during the week has been excellent. Lead is rising in value. Some holders of Mexican lead in the United States are manufacturing the product in bond at New York and reshipping it to Europe, netting a good profit thereby while putting by tidy savings, from the effect of the tariff, on sales in the United States. Quotations are unchanged. Domestic is at $3.75 and imported at $3.80, last week's figures.

Copper.—The red metal has lost its spectacular side and much of its interest now that trading has steadied itself. There are still rumors of a ring and a curtailment of production, but the market shows up better this week, though the quotation remains at 13½c.

Old Materials.—Holders of stocks are getting pretty good returns these days at metal dealers and manufacturers are both open to buy supplies. Stocks in dealers' hands are growing and sales are of small lots only. Prices are unchanged. Dealers are offering for heavy copper and wire, 11 to 11½c; light copper and bottoms, 9¾c; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½c; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

Sept. 30—An active movement has been noticed in all lines, not only purely fall, but general ones as well, and it is evident that dealers are sorting up well for a strong consumptive demand. Booking ahead is not so heavy as it might be, and there is still the strong desire to order and take delivery of supplies at once. The trade is not speculative in character, but it is steady and well assorted. Excellent business is being done in guns, ammunition, and other sporting goods. Skates and hockey sticks are moving freely, but snow shoes are yet on the slow side.

Lanterns, lamp burners, cattle requisites, horse blankets, sleigh bells and other fall and early winter lines are all prominent. Stoves and ranges are feeling the cooler weather, while the strong movement in nails, bolts and nuts shows that repairing work is now going on actively. Cutlery has improved, due no doubt to the nearing approach of Thanksgiving Day, and the Christmas season. Enamelware is also a good seller, while boot calks and axe handles are showing much more activity. No important price change is announced and the market generally is firm and steady.

Seasonable Lines—Orders for fall lines are coming in much more freely. There is a brisk movement in sleigh bells, and horse blankets, also lanterns, lamp burners, chimneys, and weather strip. Snow shovels are also commencing to move. Carpet sweepers and general household lines are in very steady request, and form a good percentage of the volume of trade moving. Oil stoves are also active. The market has a firm tone.

Builders' Hardware—Builders' hardware continues to show good strength, and orders for well assorted lots are coming in from all over the country, showing that the consumptive demand is well distributed. The tendency all the time is for a higher grade of article. We quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Sporting Goods—There has been a strong call for sorting up purposes in guns, ammunition, cartridge belts, bags, knives, primers, and so on. It is evident that a good trade has developed for these lines. With the opening of the football season trade in balls and accessories has improved. Hockey sticks and skates have improved. Immediate delivery is being taken in many cases. Snow shoes are still rather on the slow side.

Bolts and Nuts—With construction work active and farmers fixing or intending to fix their barns and vehicles, the demand in bolts, nuts and nails shows good activity, and the supply seems just about equal to the demand. The market is unchanged, and we quote: Discount on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware—With the nearing approach of the winter and higher freights, there is an increased call for heavy hardware, especially bar iron and steel. We quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ¼, $3.25; 1, $3.25; anchors, 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each; and steam gauges, 35c to 80c.

Wire—There is a good movement in general wire lines. An improvement is noted in fencing lines. We quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $280; galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal; Coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots; plain wire, bright, annealed and annealed and oiled, $2.35 base; Staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Sept. 30.—Trading this week is hardly so good as last week; nevertheless it is steady. The last week in September is a sort of off week, a lull between the demand as a result of the Exhibition and the general call for seasonable fall and winter articles.

The market continues to show strength in prices, though no advances are noted. The goods mostly asked for are stable goods and farm and household lines. Lighting and heating goods are in splendid demand. Builders' hardware is having a great call where a specialty is made of this class of hardware.

Country buying is a little irregular, orders being placed conservatively. Stocks are fair and shipments are small, though frequent. Booking of wire cloth, poultry netting, screen hinges and harvest tools have opened, but there is no apparent rush to orders as yet.

Fall Goods.—Demand for seasonable goods s varied. Stable lanterns, house blankets and pitchforks are still active. Cow ties are selling better and there have been calls for churns. Some few dog muzzles are yet moving and field fence has been in fair call. The lines showing increase are those wanted in early winter—wire mats, foot warmers of all kinds, sleigh bells, horseshoes and nails, etc. Machine tools, oilers, metal polishes and glues are becoming more pronounced, as also is belting. Weather strips, axes, edge tools and lumbering supplies are showing more stir. Prices hold steady and an unchanging market.

Builders' Hardware. — Hardwaremen specializing in this department report bumper business just now. So many houses are being completed that owners and architects are hurrying on orders so as to have things ready before the cold weather. Uniform sets are going out in large volume locally. The country is ordering pretty well in stocking up varieties of shelf hardware. Butts, hinges, locks and bolts are prominent. Metal shingles, steel sidings and metallic ceilings are very active just now. Sheet metal workers are greatly in demand. Ventilators, too, are a wanted article. Prices all firm.

Household Goods.—Cutlery and alarm clocks are two of the most prominent lines just now. There are some opening inquiries for Christmas goods for presentation purposes, but sales are not yet to the front. Food choppers and preserving utensils still figure in orders, though not so much as a month ago. Waffle irons are something new for the trade to handle generally. Kitchen tin and enamel ware are moving more steadily now, and urns for tea, coffee and hot water are being prominently shown by some of the larger hardware stores. Washing machines, mops and general housecleaning goods are still moving along fairly well, as, too, are vacuum cleaners.

Tools.—Builders' tools are somewhat slow with the exception of glaziers' tools, which are particularly active. Booking by manufacturers for next year's trade is commencing. Auger bits are selling pretty well in country districts.

Heating and Lighting Goods—All kinds of heating and lighting goods are moving splendidly. Coal and wood stoves, ranges and furnaces are especially prominent, but there are as well a number of gas stoves going out locally and to natural gas zones. Coal oil heaters are gaining headway and charcoal for winter kindling seems to have taken hold. Lamps and chimneys are very seasonable just now and are being delivered in great volume. They figure in 90 per cent. of this week's orders. Wall and chimney thimbles and stove pipe are active. Wall and floor radiators are selling well. Gas controllers are being adopted more generally than for years past.

Heavy Hardware.—Bar iron is gaining ground, but pipe—particularly the smaller sizes—maintains its lead. Tank lugs for water and other kinds of tanks are much to the fore and there is a good, steady demand for rivets, bolts and nuts.

Sporting Goods.—Some late orders for shooting goods are still coming in. Football supplies are about done. Skates and hockey goods are showing up lively. Razors for Christmas are being booked and there is some inquiry for iron toys. Pocket knives are steady.

U. S. METAL MARKETS.

New York, September 28,—The Iron Age says the developments of the past week have not been calculated to stimulate demand for iron and steel products. The uncertainties in the outlook are such as the conference of several large manufacturers of steel, and the assuring statement which followed it, were not suffici-

cut to remove. Buying for immediate needs is the policy of consumers all along the line, and on their part producers are adjusting operations accordingly. It is a condition under which much of the business going will flow in the usual channels, few cases arising in which tonnage will be tempting enough to prompt a clash which would provoke retaliation.

The heavy lines with which last week's rumors of a price war were chiefly concerned have been quietest. The lighter products are fairly active. More inquiry has appeared for sheets and prices are firmer than in recent weeks, manufacturers more generally quoting 2.20 cents for No. 28, whereas 2.15 cents has been considered the market recently.

Pig iron is sagging. More business is being done for 1911, and the important development here is that the advance recently asked over prices ruling for early delivery is fading away. Some Northern furnace companies have sold for the first quarter, and even first half of next year, at very close to to-day's prices. With most Southern furnaces $11.50 for No. 2 for 1911 is still the minimum.

HARDWARE TRADE GOSSIP

Ontario.

The Chelmsford Coal Gas and Oil Co., Chelmsford, have obtained a charter.

C. A. Drumm has opened a new hardware store at Holstein, Ont., the building being 37x75 feet, of solid cement.

A permit has been issued to the Canada Metal Co., Toronto, for a $5,000 extension to their Fraser Avenue foundry.

Charlie Drumm, hardwareman at Holstein, moved into his new store last week. Eight hardware travelers went to the town to help him move his stock. The new store is heated by hot water, has a gasoline lighting system and is fitted with conveniences equal to hardware stores in a larger centre.

Quebec.

J. A. Dugas, Rawden, Que., was a caller on the Montreal hardware trade this week.

A. Laberge, St. Michel, Que., was noticed in Montreal this week, buying hardware.

V. Lebault, St. Laurent, Que., was a caller on the Montreal hardware trade this week.

A. A. Trisch, manager of the Ever-Ready Safety Razor, Montreal, was married last week in New York to Miss Mabel Kaufman. An extended trip to the south of the United States is being taken.

The Allen-Schofield Co., Montreal, has been reorganized. W. E. Boreland is now president and treasurer; W. Frank Murphy, vice-president; H. A. Clark, W. Bruce Taylor and R. J. Seale, directors. The company is in a better-equipped state than ever, and are manufacturing a full line of brass hardware for automobiles, motor boats, also castings for airships, candlesticks, builders' hardware, etc.

The death occurred on Sunday in Montreal of Charles Douglas Chown, who had been a resident of Montreal for several years, and was for some time on the circulation staff of the MacLean Publishing Co., in Montreal. Mr. Chown came to Montreal from Kingston, where he conducted a hardware business. He was connected with some of the wholesale hardware houses in Montreal. He was buried on Tuesday at Kingston.

C. F. Smallpiece, manager of the eastern branch (Montreal) of Taylor-Forbes Co., who organized the Montreal ex-members of the Q.O.R. to take part in the semi-centennial celebration in Toronto recently, and whose efforts were held to be largely responsible for the success of the trip, was presented this week with a handsome silver and cut glass tantalus stand from the Montreal members, as a token of their appreciation of his efforts on their behalf. The tantalus is a very fine example of silversmith's art. The case is oak, and the bottles are cut glass, all the trimmings being in silver. The case has a gun metal plate, bearing the regimental badge, and the colors are worked in enamel.

Western Canada.

B. McLaren has opened a hardware store at Calgary.

Lee & Thorvilson, hardware merchants, Delisle, Sask., have dissolved.

The Albion Iron Works Co., of Vancouver, is in voluntary liquidation.

F. Mallett has started a tinsmith business at McAuley, Man.

C. J. Lamier has started a plumbing business at Wetaskiwin, Alta.

James Stout is advertising his hardware business at Irricana, Alta., for sale.

C. H. Prest has sold his hardware business at Kelliher, Sask., to Kline & Lang.

J. Fleming of the Penticton Hardware Co., spent his holidays at Vernon, B.C., last week.

Rollefson Bros. & Co., hardware merchants, Hanley, Sask., have disposed of their business.

W. G. Duggan, hardwareman and electrician at Camrose, Alta., has sold his electrical business.

S. H. DeWolfe has sold his hardware business at Davidson, Sask., to The Pioneer Hardware Co.

D. G. Smith, harwareman and harness dealer, McAuley, Man., is succeeded in business by H. Parker.

The Radville Sask. Hardware Co. are erecting a new building to be used as a tinshop and addition to their hardware store.

Jos. J. Hewitt, who conducts a flourishing hardware business at Medicine Hat, was married a week ago to Miss Edith Lee at Orangeville, Ont.

Harold Anderson, traveling salesman for Alberta for Merrick Anderson hardware jobbers, Winnipeg, died of typhoid fever at Edmonton last week.

The Kobold Tool and Cutlery Co. have opened for business at 424 Main street, Winnipeg. A specialty is to be made of automobile supplies as well as silverware and heavy hardware.

After nearly two months' delay the tenders for garbage tins, 1,000 of which will be ordered at once, but 8,000 of which will ultimately be purchased, was awarded by the Victoria city council recently. The tender of Joseph Market at $2.70 was accepted.

United States.

Bing Bros., Nuremberg, Germany, manufacturers of metal and enamelled toys, kitchen furnishings, etc., intend establishing an American office at 377-379 Broadway, New York, under the management of John Bing.

BRITISH VISITOR ILL.

W. Willis Mitchell, who, for many years has been coming to Canada in the interests of Jas. Cartland & Son, Birmingham, has been in Toronto for the past fortnight. Mr. Mitchell was, unfortunately, taken very unwell in Montreal and had to spend nearly a month in the hospital under the care of doctors. Although in a very weak state he is still, with the assistance of his son, Vernon Mitchell, who was cabled for from the works, continuing his journey which has been delayed on this account.

Amongst his many patterns are many new examples of half furniture in Adams, The Georgian and Sherraton, as well as other periods, together with new log dogs, fire guards of all descriptions and fancy ware, consisting of handsomely made clocks, 30 hour and 8 day, made in antique copper, antique brass and other bronzes, also new examples of table and dinner gongs, fancy ink stands, some with finished oak fitments together with candelabra and candlesticks and writing paper containers constituting elegant writing suites. Also some very fine examples of English lock furniture together with many samples used in Canada.

The general run of hardware is excellently well kept up by newer patterns of window adjusters, Canadian casement furniture, store door latches in great variety as well as the well-known examples of Preston Improved fanlight openers, the convertible as well as the invisible. These three latter being their latest patents, all of which are well-known throughout the Dominion. The Cartland firm in their make of standard brass goods have, with the assistance of improved machinery and methods found it possible to reduce their prices, thus keeping well abreast of legitimate competition in their various productions.

A new illustrated catalogue is just off the press. This contains all reduced prices mentioned above. Same may be obtained, where not already sent, by wholesale houses or jobbers upon application to the firm.

News and Methods of Canadian Hardwaremen

St. John Hardware Firm Goes After Mail Order Trade—Parkhill Firm Uses Enterprising ideas in Developing Business—Chatham and Petrolea Merchants After Business at Fall Fairs—Plymouth Cordage Co. Holds a Fair—Fine Sporting Goods Window Display.

ENTERPRISING ADVERTISING.

St. John, Sept. 27.—T. McAvity & Sons have been doing some extensive advertising lately, large three-column ads. appearing in several New Brunswick papers, including the Sussex Record, St. Andrew's Beacon, etc. These ads. featured household articles, grindstones and tools, pumps, roofing, etc., and offered to pay freight, express or mail charges on orders received before October 15. A key letter was put at the bottom of each advertisement in order to trace results on mail orders received.

The same firm recently had a six-column advertisement in the St. John Telegraph, devoted exclusively to guns and rifles. Regarding the "Ross" sporting rifle (Model R) they said:

"The sportsmen can now procure a Canadian made rifle of the highest class, with the embodiment of every essential and desirable feature of the modern arm. The Ross Model "R" is handsome, durable and effective, and in appearance and general finish compares very favorably with very much higher priced weapons. Length of Barrel, 22, 24 and 26 inches. Cartridge, 303 British. Capacity of Magazine, 5 cartridges, $25.

IDEAS WORTH COPYING.

Parkhill, Sept. 26.—A. W. Humphries & Son, for several years past, have created a lot of interest locally by holding contests for the tallest specimens of wheat or corn, the largest pumpkin or potato, etc. In August, this year, they offered a prize in a tall wheat contest, more than twenty of the entries exceeding 5 feet 10 inches in height. Peter McNames presented a dozen samples 6 feet 7 inches high and from 3½ acres he thrashed 115 bushels of Manchester variety. Reuben Wilson reached 6 feet 4½ inches; Elijah Harris, 6 feet 1½ inches and Thos. S. Thompson, 6 feet 1 inch. Neil McKillop thrashed 450 bushels from eleven acres, nearly 41 bushels per acre. The farmers of Middlesex and Huron will, it is said, have three times the quantity of grain and farm stuff for sale this year than they had last year.

On September 10 they closed a tall corn contest, and the advertisement reproduced shows how they featured the contest in their store advertising. There were 30 entries in the corn contest, the tallest stock being 14 feet high, others being only one and two inches shorter.

These contests brought a lot of people and trade to the store besides causing a great deal of talk and advertising the store through the surrounding country. Regarding them A. W. Humphries says:

"We consider it about the cheapest advertising we can get and are well satisfied with it. The plan was entirely original with us as we never heard of any person doing it until we did it ourselves."

"We always keep a table of fresh water in the store for customers to drink," continued the former president of the Ontario Retail Hardware Association, "and a place for them to sit and rest as well as to put their parcels. We tell them to have all their purchases sent to our store so that they will be all together when they are ready to start for home."

Ad. Announcing Tall Corn Contest

HARDWAREMEN AT FALL FAIRS.

Chatham, Sept. 28.—Space at the Peninsular Exhibition, held here last week, was advantageously used by two local hardware firms.

Westman Bros. exhibited a full line of Jewel stoves and ranges, while an adjoining section in the main building was devoted to plows, express wagons and similar lines. A representative was on hand to distribute literature regarding the lines exhibited.

Geo. Stephens & Douglas made liberal use of space in the main building. In the inner circle an entire section was devoted to the pianos which form one of the important side lines of this hardware firm, this portion of the exhibit being in personal charge of George Stephens. In the outer circle another entire section was taken up, the lines shown being White sewing machines, automobile tires, chains and other supplies, portable bath tubs (a novelty just being introduced), cream separators, washing machines. In this section also was shown a handsome display of the Modern Malleable Range Company's ranges, manufactured in Chatham, which are handled by Geo. Stephens & Douglas.

The firms mentioned have been thus advertising through the medium of the fall fairs here for quite a number of years, which indicates that they feel that this method of advertising is successful. Stephens & Douglas state that

the fall fair exhibit brings them in touch with many new customers and that a number of direct sales took place on the grounds.

CORDAGE COMPANY HOLDS FAIR.

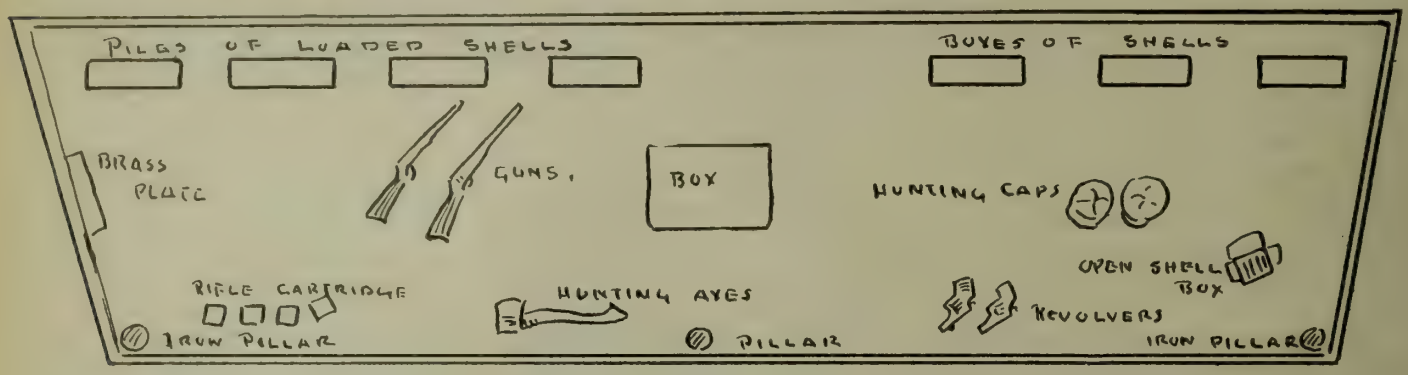
Welland, Sept. 25.—The Plymouth Cordage Company's third annual Fair was held here on Saturday. Bad weather caused a postponement of the sports until next Saturday. Cash prizes of about five hundred dollars were given. The exhibit of poultry, vegetables, flowers, cookery, fancy goods, canned fruit, etc., rivalled many county fairs. None but employees of the Cordage Company were permitted to exhibit. In addition to paying a large amount in cash prizes, the Cordage Company pay all expenses, everything being free. There were 561 exhibits of chickens, in addition to ducks, turkeys, pigeons and rabbits. The Welland Band attended. Valuable prizes were given for lawns, walks, yards, trees, vines, vegetables, gardens, flower gardens, kitchen gardens, poultry yards, fruit trees on grounds occupied by the employees.

FREIGHT SHIPMENTS DELAYED.

Halifax, Sept. 26.—There is practically no change of special note in the wholesale hardware business since last report. Some small orders have been completed, and outside of a light jobbing trade there is very little doing. Some of the dealers are complaining of delays in the shipment of their goods to coast ports. Just at this season of the year all the small steamers plying between Halifax and coast ports are crowded with freight before the close of navigation. Shippers have to be on the ground early to get their goods off.

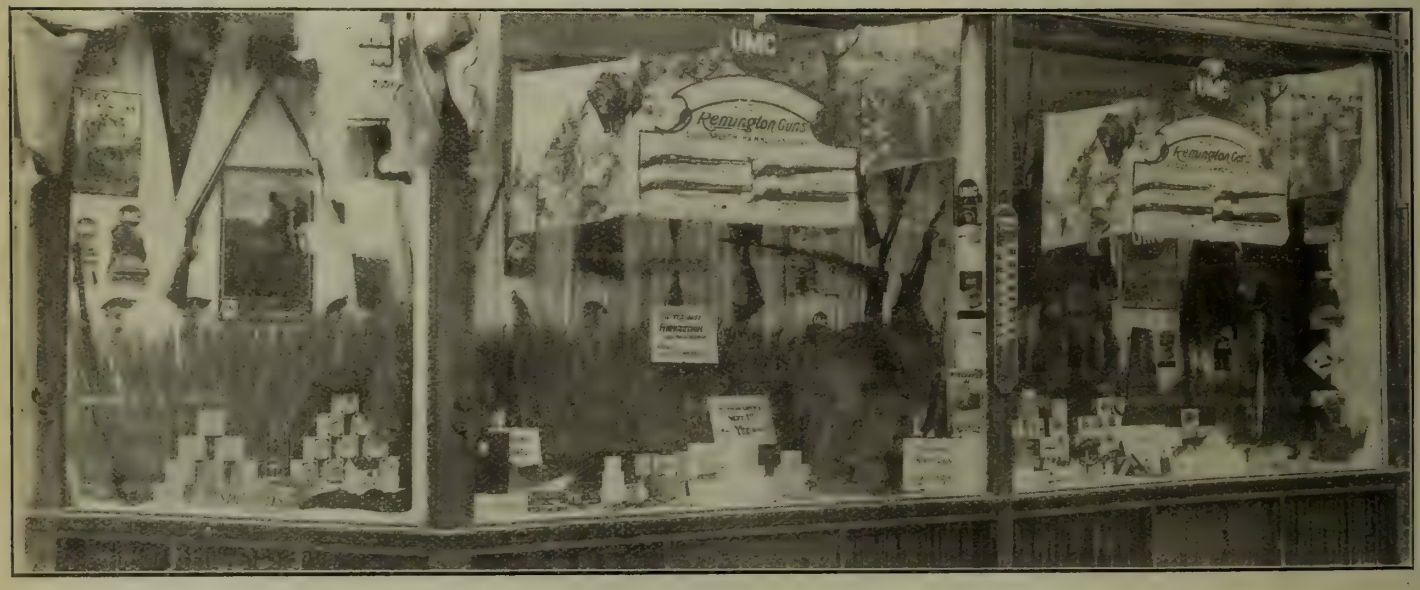
The Dominion Iron & Steel Corporation are calling for tenders for the construction of seven large buildings, which are to be erected immediately at the plant in Sydney. These new buildings include a boiler house, machine shops, foundry, warehouse, oil house, carpenter shop, repair shop and finishing mill. The finishing mill will cover an area of four hundred square feet.

INVITED VISITORS TO STORE.



Petrolea, Sept. 26. — Van Tuyl & Fairbank had an advertisement in the local papers issued before the Petrolea fair showing a large cut of their store and inviting visitors to make the store their headquarters during the two fair days.

SPORTING GOODS WINDOW.



Winnipeg, Sept. 26.—A window which caused considerable comment and was the means of selling an immense amount of goods for the J. H. Ashdown Co., recently is shown in the accompanying picture. It was arranged by W. J. Illsey, who describes its preparation as follows:

"The bottom and background was of white cheesecloth, while suspended across the back was a row of penants. Below these and in an artistic commingling were hunting coats, guns, caps, vests and rifles and a liberal lot of hangers (Dominion, U.M.C., Winchester and Eley.) Along the back on window bottom were piles of loaded shells, gun cases, etc., and from these and graduated to the front were revolvers, game bags, sweater coats, hunting boots, revolvers, gun cleaners, etc. Along the background at the bottom, a row of rush grass provided hiding covers for hunters and in the centre on a box were a couple of hay suits."

As Mr. Illsey says: "Any ordinary hardware store carrying sporting goods can follow the layout shown in the photograph and sketch and arrange a good display."

Arrangement of Goods on Floor of Window.

Excellent Sporting Goods Window Display Arranged by W. J. Illsey, for J. H. Ashdown & Co., Winnipeg.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Sept. 29,—A prolonged period of excellent weather has continued the building operations very briskly. Everywhere throughout the west the demand for nails, building paper, hinges, hooks, etc., is very heavy. At one time it was thought that the building activity would close down early on account of the possible money shortage. A prediction recently, however, of Vice-President Whyte, of the C.P.R., to the effect that a conservative estimate of over 90,000,000 bushels of wheat would be harvested in the west this year, has tended to brighten the business outlook considerably.

All fall goods are moving well. Finishing supplies are going out satisfactorily, and there is a good future ahead of this trade. Farmers are building fences at the present time and shipments of wire, plain and barbed, are very heavy just now. Fall trade in the sporting goods, particularly in ammunition, and guns, has been enormous. Hunters' accessories have also moved well, and the brisk trade continues. Yesterday, a local jobber received a large order for special Christmas sale. This means that the Christmas trade has already opened up, and it would seem that satisfactory business is going to be done for a wide range of holiday goods. Of the household goods that are moving at present, and the Christmas lines that will be in demand, cutlery will, no doubt, form a large part.

Winnipeg Hardware Quotations.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—Planished copper, 30c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, $4; pressed standing seamed roofing, 28, painted, $3,20; galvanized, $4; 26, $3.55 and $4.35.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 10; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.80; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2, and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process —No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3,30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50. Galvanized, ¼-in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼-in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $4.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper, No. 8, 39c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c. Coppered, No. 8, 18c.

Rope—Sisal, 9½; pure manila, 11; British manila, 9¾; lath yarn, 9¼c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—22c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $8.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.75.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box. $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2.90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.25.

Paints and Oils.

An advance has been made on all paints of 20c, due to the continued stiffness of linseed oil. The oil market has strengthened all other items in the list and may advance others in a short time. The local output continues heavy, and as the season advances the demand for finishing supplies is very brisk.

Putty and Glass—The 40-cent advance of last week is strongly maintained on putty. The future depends upon the condition of the oil market. Both of these lines are moving well, and No. 1 grade plate glass is particularly in demand. Putty, in bbls., $2.90; cases, $3.15; kegs, $3.40.

Linseed Oil—Last week's price of $1.15 for raw and $1.18 for boiled continues very firm. The 70,000,000-bushel shortage of seed in U. S. may make higher prices very soon. Higher prices are being paid for seed.

Turpentine—There is nothing new to report in turpentine. The figure is very strong at $1.05, and an advance is confidently expected.

Varnishes—The output is enormous in all interior finishings. Household supplies are going out well and will continue for some time.

White Lead—A good trade is going on at $5.75 to $6.25, according to brand.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 24c; Searchlight, 22c; Red Rose, 25½c; Keystone Special, 20c; Pemoline, in bulk, 19c; Silverlight, in bulk, 16c; Acme lamp, in bulk, 28c; White Rose, in bulk, 22c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

ARMS AND AMMUNITION.

The Ironmongers' Chronicle, Birmingham, England, has issued a booklet, entitled "Arms and Ammunition," retailing at sixpence. It is a reprint of a series of articles written by Dudley Wilson, for thirty years connected with the gun trade in England. Practically every phase of the manufacture, repair and sale of fire arms and shooting materials is dealt with interestingly by a writer with expert practical knowledge.

A Good Fall Seller

MORE Inside Floor Paint is used during the Fall than any other time of the year. It is the logical time of the year to paint inside floors and make them attractive, for we spend most of time indoors during the Winter months. Nothing improves the general appearance of the interior so much as nicely finished floors.

SHERWIN-WILLIAMS INSIDE FLOOR PAINT

is made expressly for finishing inside floors of soft wood where a painted finish is desired or necessary on account of the worn condition of the floors. It is easily applied, dries over night with a hard gloss, and has great durability. Inside Floor Paint can be relied upon. You need have no fear in recommending it. It will reflect credit upon your entire stock.

Trade Conditions in the Mother Country

Output of Factories is Reaching Record Proportions — Export Trade Expanding—Fuel Growing Cheaper—A Black Spot is the Unrest in the Labor World—Tinplates Booming — American Railroads Inquire for British Railway Material.

Sheffield, Sept. 20.—The state of the iron, steel and hardware trades continues to improve. Steel branches have more work on the books than it is possible to execute in the specified time. The output so far has been very heavy, and the prospects are exceedingly bright for the remainder of the year.

The brightest branch of all is in armaments, guns and war material generally. Some Sheffield firms have two years' work in prospect. The Admiralty has given out a number of further orders and there is no doubt that these departments will prove to be exceedingly profitable.

Next in order of activity, are the special steel branches which are busier now than they have ever been. Small fortunes are being made out of special steels; and the wonder is where all the product goes to. Certainly a good deal of it is exported to the continent, Canada and the United States. When the improved high speed steel was invented, the general prohecy was that it was of such a lasting and durable character that renewals of supplies would be seldom made. Certainly renewals are not so soon required, but this has not restricted the growing demand for Sheffield high speed steels, which are acknowledged to be the best produced.

Nickel and other special steels used in the manufacture of motorcars and aeroplanes, are also in big request.

Cheaper Fuel.

Undoubtedly we are in a period of cheaper fuel. It has been discovered that the coal measures are workable to the East, possibly to the coast. Already many new pits have been sunk, and coal found in enormous quantities. Owners of new pits scarcely know what to do with the output, and in some instances many thousand tons of coal are stacked at the pit mouths.

The workings in the older pits are in some instances a mile and a half from the shaft, and as under the new Coal Mines Act, the miners are paid "from bank to bank"—that is from the time they descend the shaft to the time they ascend—it follows that the production costs are much heavier in the old pits than in the new where the men can start work directly they get down the shaft.

The new pits are thus in a position to make a cut in prices to get into the market, and this they are doing. The very heavy tonnage, particularly in Yorkshire, will undoubtedly keep down prices for a very long time.

Then, too, coal has been found in the Lincolnshire iron ore fields, and this should tend to cheapen the price of pig iron when the coal is worked.

A Black Cloud.

No sooner has trade improved than there are clamourings from all sections of workers for increased wages. In the trade unions are many who do not enter upon any demand for increased wages. in a diplomatic spirit, but threaten a strike if the demands, however unreasonable, are not conceded.

There are so very many trade unions — each of which takes into membership a handful engaged in a section of a trade — that a few unruly and never-satisfied members in each, produce a constant succession of disputes in sections of trade. Employers' federations have revolted at this, and one result of this is the lock-out of boiler-makers. If continued, this will paralyse the whole of the shipbuilding trades. There are, however, prospects of settlements.

There is also a dispute in the South Wales coal trade, and another in the Lancashire cotton industry. A Yorkshire colliery dispute has been settled, and the Sheffield moulders, after protracted negotiations, have been given an advance of a shilling per week, instead of the two shillings asked for.

If something is not done to check the power of the Socialists in trade unionism, a very unhappy state of affairs for industry, labor and capital, will undoubtedly ensue.

Rails for America.

Good news has reached railway material makers in the shape of inquiries from two United States railways for rails and fish-plates. It is believed that good orders will follow, inasmuch as American railroad managers are dissatisfied with the quality of the material procurable in the States. A year or two ago, Edgar Allen & Co. supplied to the Hudson River Railway a quantity of manganese cast steel rails and they have answered very satisfactorily.

The Silver Trades.

A few extracts from an article by Mr. Arnold T. Watson published in the British Association handbook will not be out of place. Speaking of the silver trades he points out that Sheffield is one of four cities in England at which an office now exists, authorized by Act of Parliament, for the assaying and Hall marking of silver articles.

Tinplate Activity.

There has been no relaxation of activity in the tinplate industry, quotations all round having been further advanced, while numerous demands have yet to be satisfied for near delivery, which but few works are in a position to consider. Bessemer cakes 20 by 14 are now quoted 13s 9d to 14s and oil plates 14s 6d to 14s 9d per box f.o.b. Wales. There now appears to be some difficulty in Wales to secure enough labor to keep all the mills running at full capacity. With the further plant extensions going on in Wales production towards the end of this year is likely to be increased materially, but there is now more than enough to do to keep pace with the execution of orders on hand, so that there is but little possibility of any material action this side of Christmas, while most works have already placed the bulk of their output up to the end of December. There has been, too, a considerable accession of business for execution in the early months of next year, which has made makers reluctant to consider new demands except at advancing prices.

The marked shortage of plate for near delivery, partly due to the existence of short contracts among merchants in face of a renewed demand on Eastern account, is responsible for the substantial premium now realized for prompt shipment. A temporary falling off of inquiries from certain sources has usually been more than offset by new demands from elsewhere, and the works are so strongly situated as to pick up whatever they please in the way of fresh orders. Purchases have relaxed on German account for the moment owing to the higher terms, but on the other hand South Africa has been in the market, while a large business is now again looked for in oil plates for the next few months to cover Transatlantic trade requirements.

Remarkable Growth.

The Board of Trade returns for August show that British exports reached a total of £38,638,883 an increase of £6,524,183 compared with August 1909 and of £8,296,207 compared with August 1908. The increase on the eight months was no less than £37,076,493 so that really we are a month's trade ahead of last year.

Trade with Canada has increased by leaps and bounds. The Dominion took hardware last month of the value of £6,661, compared with £3,881 in August, 1909, and £3,797 in August, 1908.

The cutlery total improved from £9,005 a year ago to £14,572. Compared with August, 1908, the trade is now three times the volume.

Canada took 78 tons of pig lead last month, 18 tons more than in the corresponding month of 1909, and 52 tons more than in August, 1908.

The increase in trade in steel bars and angles was very striking. The total ran up to 4,282 tons, nearly four times the 1,203 total of August, 1909, and over five times the weight sent in August, 1908.

Tinned plates and sheets totalled 2,799 tons, compared with 1,211 tons in August, 1909, and 990 tons in August, 1908. The eight months' total, strange to say, fell to 16,882 tons from 18,131 in the corresponding eight months of 1909.

Apart from this little setback, there is ample evidence in the returns that not only with Canada but with very many other markets of the world, a much bigger trade is now being done.

No. 28

KEEP AFTER FALL TRADE.

Now is the time for a good window display. Let the district know that you are carrying a complete stock with colors that probably it had little idea existed in liquid paints. There is a very vague idea amongst many people as to the range of shades now produced by the manufacturer. Delicate tints and yet most durable and economical ones, that are made are really wonderful, and many a customer would be tempted to buy if he or she knew that a certain shade could be procured in ready mixed form. A customer in a store was overheard to say the other day while looking at a color shade, "I had no idea that so many pretty shades could be procured," and there is no doubt that a large majority of the probable paint users throughout the country are similarly ignorant.

It is very bad policy to keep the paints in the background. They need as much display as other lines, probably more so, because every passerby knows that the hardwareman carries saws, but he does not know that the merchant has a window green, or an oak varnish stain that is exactly the color wanted for certain work the observer wants to do. Therefore the paint stock must be displayed prominently, and in that display be sure that a good idea is given of the extent of the different colors carried. Give every color a chance, for a green might swing an order where a maroon, or a white might have no effect and vice versa. Especially is this so in household specialties where matching is very important to the consumer.

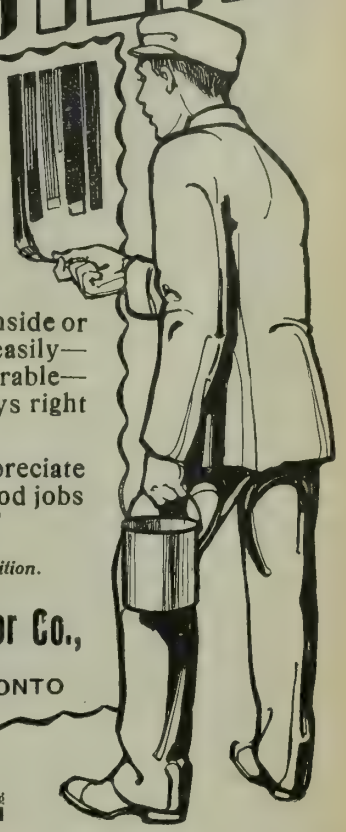
In the same way a salesman should show a customer the full line of colors and not be content to pick out a certain one and sell this, for if the customer finds out afterwards that the merchant had a color that would have suited much better the selling methods of the store are condemned, and rightly so.

Of course, as it has been pointed out before, care must be taken that colors are not shown that for the time being are sold out, for then the customer is disappointed, and this hurts the store. If the merchant knows that the color is not in stock and prefaces his remarks by stating the fact but that the paint can be procured for the customer, the latter is then prepared, but even at this the danger is run of the customer liking the color so much as to decide to try to get it at another store and thus avoid delay. The great mistake, however, is to sell a customer a color only to find out that there is none left in stock. This is where the harm is done the store.

Both by the window and the interior paints should be well displayed. Fall painting is starting. The weather is just right for the job, and people are generally feeling good. The winter must

ELASTILITE

"No Varnish Like It"



ELASTILITE certainly is **the** all-purpose Varnish—it's made for people who want a good Varnish at short notice, for any kind of work, inside or out. Flows freely—brushes easily—dries well—is extremely durable—has a beautiful finish that stays right on the job from first to last.

Specially good for Hospital, Institution and other high-class trade.

Your trade will appreciate ELASTILITE—"good for good jobs—not bad for the other kind."

be prepared for The farm outbuildings and the farmhouse itself must be rendered secure against the snow and rain. There is nothing better than paint for this Houses all over the country should be made to look spick and span inside so that the long winter evenings shall pass away amidst the most cheerful surroundings. There are plenty of reasons why painting should be done this fall. Merchants should show this by their window display. A window is a great means of inducing people to make up their minds to buy.

PAINT AND OIL MARKETS

MONTREAL.

Montreal, Sept. 30—For the time being there seems to be a cessation in paint and oil advances, and the market has a quieter tone. There is, however, no let up in the tension on linseed oil and turpentine, and holders are keeping tightly to supplies. The bullish tendency generally has brought the white lead grinders more into line. White lead has been selling not far off cost. The prevailing price for pure white lead for large lots in the United States is around 7½ cents, in a coutry which produces its own dry article, expresses its own oil, and manufactures its own grinding machinery, thus cutting cost all the way round, and still white lead has been about $2 per 100 lb. dearer across the border than in Canada.

Trade generally is very good, and despite the disturbance of advancing prices, orders for all lines are coming in steadily. The fall movement has opened out most promisingly, and makers and jobbers seem satisfied with conditions.

Turpentine—The market is very firm, prices continuing to have an upward tendency. The primary markets report a bullish feeling, and supplies are strongly held. Notwithstanding the higher prices an active demand is reported at $1 to $1.02.

Linseed Oil—Naturally great caution is being shown in buying, but still the needs of the consumers are causing steady trade to come in. There is no relief in the tension, and the trade has made up its mind not only to face with equanimity present prices but even higher ones. Some jobbers report little linseed on hand while those who are in good supply are not keen on selling too much at a time. There is no change in prices generally although some holders have advanced prices a cent or two. We continue to quote $1.08 for raw and $1.11 for boiled.

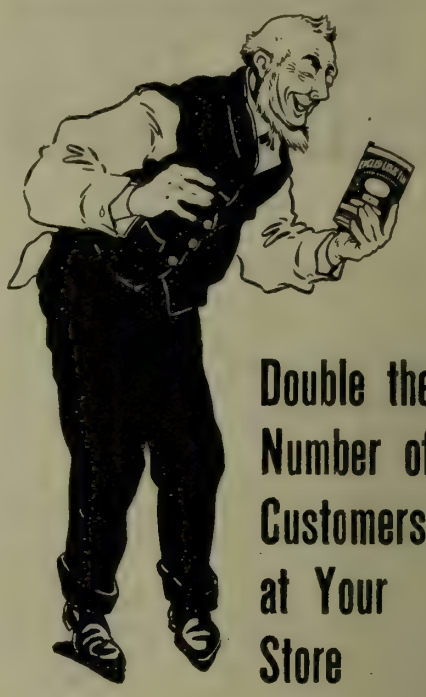
White Lead.—White lead grinders are more on a line with each other, and since the meeting in Montreal last week a much firmer tone seems to be shown, there being more harmony all the way round. For the time being the advance last week does not seem to have checked the demand. In view of the close of navigation and of higher freights in sight a good call is noticed in white lead, red lead, litharge, and lead products generally. We quote white lead $6 to $6.50 according to brand.

Varnishes and Japans—Stimulated by the advanced prices in turpentine there has been very active shipment in varnishes, finishes, stains and enamels. All the varnish catalogues are being revised and from 5c to 15c and even more is anticipated in some lines. Bulk varnish is showing great stimulation the large factories buying freely.

Putty—The advance of 15c in putty only natural in view of the higher figures prevailing for linseed oil does not seem to have as yet checked the demand and heavy orders are reported especially for the boats. We quote: 100-lb. drums, $2.60; bladders, in barrels, $2.85.

TORONTO.

Sept. 30.—Enormous business has been done the past week in white lead. A good many of the orders running from one to four tons and totalling between 20 and 40 tons at each of the several Toronto warehouses.



The high prices in general lines has called a halt in present trading in other paint goods, but the consuming public appears to have taken the advanced prices reasonably and as a matter of course.

Demand for seasonably lines is good at the hardware stores and jobbers state they are satisfied that stock buying will improve before another month goes by.

Linseed oil and turpentine continue to firm up. In fact, though no further price advances are noted, the market is stronger than a week ago.

Turpentine—The price is stationary in the States of Florida and Georgia, making the cost in Toronto the highest known for years. The selling price to hardware merchants remains the same as last week but as there is no accumulation of turpentine at the shipping points in the southern states the probabilities are for some slight advances from now until the month of April. There is still a fluctuation in quotations running from $1.01 to $1.03 a gallon for single barrels. The tendency is toward the higher figure, though, most of the houses quoting that price.

Linseed Oil—There is no change apparent in future prospects. The cost of linseed oil for 100-barrel lots laid down in Toronto is now at the same price as the jobbers are at present charging for five-barrel lots to merchants. Flaxseed advanced another few cents in Chicago during the past week, and there does not appear to be any reduction likely from either of these two points in the near future. Crushers of linseed oil in Canada are still supplying their customers for present delivery, but have no large stock on hand, consequently, they refuse to book orders for

Double the Number of Customers at Your Store

In your city there is doubtless a fairly constant amount of house-painting done by a fairly constant number of people.

Anything that will make two paint users spring up in place of one means more money for you.

SPREADS EASY

SPREADS FAR

the future and for the next few weeks the market is very bare in all directions so that prices are sure to be maintained. If any large quantities should be called for the price must advance still further. Some of the local jobbers have refused to quote, saying they have no oil for sale. While single barrels of oil may yet be had at $1.07 and $1.10—last week's high quotation—the situation is stronger locally and prices are generally firming around $1.09 and $1.12 for single barrel lots.

Rosin—Reports from Savannah this week state that the stocks of rosin held there are just half what they were a year ago at this time. There is consequently a continued tightness to the market. "G" rosin is at $3.25 per hundred pounds in barrel lots of 500 pounds.

White Lead—Splendid sales of white lead have been made since last report. Another advance seems likely in November. The elimination of "No. 1" lead and the agreement as to "Government standard" has done much to make the situation more steady and satisfactory. Ton lots of "Government standard" white lead stand at $5.65 f.o.b. Toronto, with 25 cents a hundred more asked for less than ton lots. Private brands of genuine run at least a dollar above these prices.

Red Lead—This line is unchanged in price or condition. In common with other paint lines, red lead is this week selling slowly. Genuine in casks is at $5.75 per hundred, with No. 1 at $4.25.

Putty—The new prices have not stirred up trade to any great extent, but the higher quotations were expected and the trade is satisfied. Bulk in barrels is at $2.20; in 100-lb. drums, $2.45; bladders in barrels, $2.70; in 100-lb. irons, $2.80; 25-lb. loose, $2.55; cased, $2.60; 12½ lbs., cased, $2.80. Special putty prices are 10 cents below these figures for like quantities, and pure putty 35 cents higher.

Glass—Business is passing in good volume. The higher tendency of the paint market has made glass firmer, though it is not likely from present indications that advanced figures will be quoted.

Petroleum—The strong feeling apparent a week ago has not continued. In fact an easier tendency has developed and some lower prices are asked. Canadian prime white is still at 13 cents a gallon, but ½c has been clipped from American Water White and Pratt's Astral, these lines now being quoted at 14½c and 17c.

Benzine and gasoline, too, are easier by ½c, being now quoted at 16½c and 18½c, respectively.

FALL PAINTING.

This fall should prove a bonanza for the paint dealer. The weather has been unusually severe, the early spring was followed by a frost and excessive moisture, this in turn was followed by a very dry, hot summer.

The first dry, hot spell opened the pores of the wood so that the frost and moisture which followed penetrated to the inmost depths; then came the hot, blistering summer. Wooden structures of all kinds will suffer more severely this winter than they have for many seasons if they are not sheathed properly.

Lay these facts before your trade and show them the great saving they will make by painting now before snow, ice and frost work further havoc on their property. The damp spring and early summer prevented and delayed painting in many parts of the country Show them that painting should and must be done now before the damp weather commences.

RED LEAD PAINT.

There is very little red lead priming done in this country on wood, but it makes a good primer, just the same. It not only dries of itself, but that it imparts its drying qualities to the coat of paint that is applied upon it. It would seem, therefore, that when we prime with red lead paint, whether on wood or metal we should put very little japan driers in the paint over it. The addition of some lampblack to red lead paint retards it too quick setting or drying, and at the same time assists the oil in holding up the heavy red lead. Bridge painters like to add considerable lampblack to the red lead for the finishing coats, for this gives a very pleasing brown shade and holds up the paint in the pot quite a while. The great bugaboo with red lead paint is, of course, its habit of settling, in which respect, however, it might very well serve as a good example to certain slow-going mortals.

COVERING CAPACITY OF PAINT.

There is no standard for the spreading rate of paint in actual practice, but a paint that is in condition for ordinary painting can readily be brushed out to cover 1,200 square feet of a fairly smooth surface to the gallon of paint. Indeed, in most cases, if not spread out at this rate, the paint will run. A railway company advertised for a paint for structural iron, to be made from pure white lead tinted with best ochre and black, to a light greenish-drab. It was to weigh 16 pounds to the gallon, and to cover up solidly in one coat not less than 675 square feet of structural iron. The best of the paints submitted, when brushed out to the utmost, covered only 566 square feet, the lowest one on the list covering only 512 square feet, and the films of paint in all cases were such that a second coat of paint was necessary. In practice we find that a good lead and oil paint, one that will not run on a vertical surface, applied to a hard, non-absorbent surface, will not cover over 650 square feet of surface. A gallon of paint, made from the best lampblack, will carry more oil than any other pigment, and even this will not cover properly over 1,000 square feet, one coat.

WHAT INTERESTS THE DEALER?

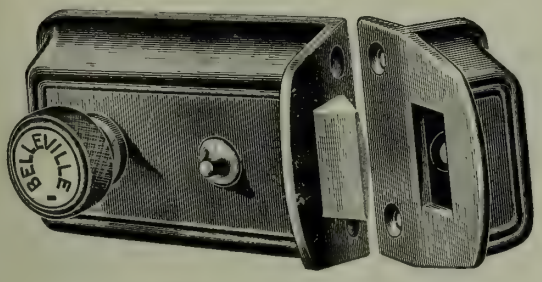
To know that the Quality is right.
To know that his Profit is right.
To know that the goods are popular and easily sold.

We know the quality is right, or we would not be spending a comfortable fortune each year in advertising.

When you compare our discounts and lists with other varnish manufacturers you can determine whether your profit is right. The profit, after all, is what is necessary to keep you in business. We unhesitatingly state that there is more profit on our line than on any other you could buy.

Goods that are popular are easily sold. We are judiciously spending big money advertising to make our line popular. By selling a well advertised article you have back of you the name and reputation of the maker for quality.

By combining your JAP-A-LAC and varnish purchases, we have a proposition to offer which yields a handsome profit.



All we ask is an opportunity to send you our lists and explain our proposition.

Paint and Varnish Removers.

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish in Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	Name of Brand.
The Sherwin-Williams Co., Montreal, Canada.	**"Taxite"**
International Varnish Co, Ltd., Toronto, Canada	**"Klensa"**
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	**"Expedite"**
British American Paint Co., Victoria, B.C.	**"Bapco"**
Mount Royal Color and Varnish Co., Montreal, Canada	**"Scrape-off"**
James Robertson Co., Ltd., Toronto, Canada	**"Robertson's Paint and Varnish Remover"**
Sanderson Pearoy Co., Ltd., Toronto, Canada	**"Devolite"**
Stewart & Wood, Toronto, Canada	**"Solvo"**
Martin-Senour Company, Ltd., Montreal, Canada	**"Martin-Senour Paint and Varnish Remover"**

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

100A QUEEN VICTORIA STREET
LONDON, ENGLAND

A Few of the Valuable Mechanical Improvements on Carpet Sweepers WE HAVE INVENTED AND NAMED

BROOM-ACTION—The mechanical feature in a carpet sweeper, by which the brush is made self-adjusting to all grades of carpets, was controlled by us during the life of the patent, and we coined the term "Broom-Action," which briefly describes the self-adjusttng feature of a carpet sweeper, and we secured a trade mark on the words "Broom-Action."

THE CASE—We originated our present style of case, and this has been copied throughout the world.

ANTI-TIPPING DEVICE—We invented the first device for preventing the sweeper from tipping when drawn quickly over the carpet, and gave it the name "Anti-Tipping" device.

BRUSH RELEASE—We invented the first satisfactory device for easily removing the brush from the sweeper, and called it "Brush Release."

AUTOMATIC DUMP—We invented the first satisfactory device for opening the pans and dumping the sweepings, closing the pans automatically, and styled it "Automatic Dump," and this device has been copied throughout the world.

ANTI-RAVELER—We invented the device that covers the holes in the ends of the brush, and prevents same from filling up with dust or ravelings, and styled it "Anti-Raveler."

FURNITURE PROTECTOR HOLDER—We invented the only device that successfully prevents the furniture from dropping down at the corners of the sweeper, and styled i "Furniture Protector Holder."

HANDLE FASTENER—We invented the first and most satisfactory handle fastening device ever put on the market, consisting of a metal covering for the wood thread that holds the handle firmly in the ball socket, making the handle practically everlasting.

"CYCO" BEARINGS—We invented the feature by which the positive rotation of the brush on all grades of carpets is secured, and styled it "Cyco" Bearings.

DUST-PROOF AXLE TUBE—We invented the device enclosing the axle rod in a metal tube, preventing hairs, threads and ravelings from winding about the axle and dust from escaping through the holes in the end of the case, and styled this device "Dust-Proof Axle Tube."

BALL BEARINGS—We have finally produced the first and only Genuine Ball Bearing Sweeper ever offered on the market, and which we regard as the greatest mechanical achievement of our career. While on the market but two years, our Ball Bearing line now constitutes over three-fourths of our entire business.

Write for our Christmas Offer, the most liberal we have ever made.

5000 REVOLUTIONS PER MINUTE

ON HEAVY WOODWORKING MACHINES

It requires the very best kind of Antifriction metal to withstand such speed any length of time. "Genuine" Babbitt won't do it, and no other metal can touch Magnolia for such severe service, as well as its special adaptability for the heaviest pressures, such as Rolling Mills, Rock Crushers, etc.

Chicago, Ill., April 8th, 1910.

Gentlemen—Enclosed find 40 cents for which please send me one of your Engineer Pocket Books. I have used Magnolia for nine years on heavy duty high speed machinery, running 3000 to 5,000 revolutions per minute. Some of these machines have run for four years. Respectfully yours,

FRANK BERANEK, 1900 Fisk Street.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOKS

Containing 680 pages treating on over 2000 Mechanical and Engineering subjects brought up to date. We offer this valuable reference work at the very low price of 40 cents postage prepaid.

Cowan & Britton, - - - - - - Gananoque, Ont.

Maxwell's Latest

is the "Champion High Speed Washer." This machine differs from the famous "Puritan" only in the driving mechanism. The

Champion High-Speed Washer

is run, as the illustration shows, by a lever. This lever also starts the balance wheel, which revolves four times for every stroke. The great momentum of this balance wheel helps to turn the dolly block and makes the "Champion" run very smoothly and easily.

It is sure to be a splendid seller.

David Maxwell & Sons : : St. Mary's, Ont.

If you are a strong believer in quality you'll surely choose

"Brantford" "Roofing"

If Quality is a serious consideration with you—if you believe in providing your customers with the highest-grade roofing produced—you'll certainly stock up liberally with Brantford Roofing.

Brantford Roofing is for the quality-trade. The pure wool felt foundation is made to our own specifications. It costs us 33 1-3 p.c. more than the ordinary felt used for ready roofings. The saturation is 99 per cent. pure Asphalt.

Brantford Roofing is made especially to withstand the severe Canadian climate—and it has given unbounded satisfaction to those who have roofed with it.

The longer you handle Brantford Roofing the more enthusiastically you'll push it. It's a winner. And it's made by a firm who are loyal to the trade. Write us to send you samples and prices by first mail.

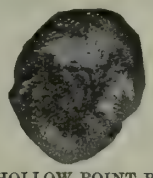
UMC



HOLLOW POINT BULLET

A NEW FEATURE IN METALLIC AMMUNITION

The hollow point increases the shocking and killing power of the bullet because of the greater mushrooming qualities over the solid lead bullet.

HOLLOW POINT BULLET
(Before Firing)

HOLLOW POINT BULLET
(After Firing)

SOLID BULLET
(Before Firing)

SOLID BULLET
(After Firing)

.44 CALIBRE

Note the cross section of the unfired hollow point bullet and its mushroomed appearance as compared with the solid bullet after being fired. Sportsmen can increase the efficiency of their rifles and revolvers in game shooting by using hollow point bullets at a trifling added cost over the old solid bullet.

UMC hollow point lead bullets come in the following sizes:

.22 Short, Hollow Point, Black and Smokeless.
.22 Long, Hollow Point, Black and Smokeless
.22 Lon Rifle, Hollow Point, Black and Smokeless.
.25 Stevens, Hollow Point, Black.
25 Stevens Short, Hollow Point, Black
.32 Winchester, Hollow Point, Black and Smokeless.
.38 Winchester, Hollow Point, Black and Smokeless.
.44 Winchester, Hollow Point, Black and Smokeless.

IT IS THE WIDE AWAKE DEALER

who gets the LEAD in the building trade. CONTRACTORS know the man who sells the right ROOFING, and every dealer can increase his business by getting after the local builders first and then stir up your customers who call for paint or any other building improving articles. Perhaps you never thought of the money you are MISSING by neglecting the local ROOFING BUSINESS. YOU cannot fall down with our strong SELLING SYSTEM behind you. We also make a fine variety of Wrapping Papers.

We carry a large stock of our leading brands, and our prices are reasonable always. Compare them with others and with our quality, and we win easily

ALEX. McARTHUR & CO., Limited

CURRENT MARKET QUOTATIONS.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

CONGO
NEVER LEAK ROOFING
The NEVER-LEAK GUARANTEED ROOFING

Congo on Maryland Terra Cotta Company's Buildings – Baltimore, Maryland

We don't suppose you care a rap what Congo is made of—what interests you is *how long it is going to wear.* What it is made of interests us because we give with every roll a *Surety Bond Guarantee,* the like of which no other manufacturer has offered.

Herewith are a few of the features that make it possible for us to guarantee Congo 2 or 3 ply for *10 years.*

It never gets hard or brittle. It never breaks or peels off. It is giving as perfect satisfaction in Europe, India and Australia, where we ship thousands of rolls, as in America.

Congo doesn't run, rot, buckle up or shrink.

The caps, nails and cement which we furnish free, are the best money can buy.

We don't use the old *tin caps* for Congo, but *galvanized caps* which never rust.

FREE SAMPLE

You can satisfy yourself as to its lightness, pliability and wonderful waterproof qualities by writing to-day for a Free Sample. As to its wearing properties—we guarantee them. Can any reasonable man ask more?

Ordinary Straight Trimmers

Why Sell Clauss Shears?

We can't give you all the reasons in a short talk like this! But here are just a few:

They cut from heel to point — They work easily and smoothly
They do not cramp the hand — They are perfectly nickel-plated
The screw does not come loose

Clauss goods are the most complete line of cutlery in the world. Our catalogue will convince you. Send for it to-day.

Marksmen are not Prejudiced Fools!

and when they see that the best scores are made with Ross Rifles, that sportsmen armed with Ross Rifles come home with the best bags, they naturally arm themselves with same rifles.

Dealers just as naturally and intelligently prepare themselves to meet the marksman's wishes, otherwise there is a lost sale in the effort to sell some other arm.

To sell the best rifle made to the marksman who knows its possibilities and wants it at a good profit is the simple A.B.C. of business.

Write for catalogue, price lists and discounts to the trade.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes (Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.

DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

"Big Hit"

CHICAGO FLEXIBLE SHAFT COMPANY, 250 ONTARIO STREET, CHICAGO

Schultze Loaded Shells

are deserving of your attention; factory loaded steel lined French paper cases, forty-two to forty-four grains of Schultze Smokeless Powder and one and an eighth to one and a quarter ounces of shot. This combination produces a very trim little shell known as the "Gastight," loaded by the Schultze Gunpowder Co., of London, Eng. Combined with this, we highly recommend

"Dead Shot" Powder

as being positively first-class in every particular. Both black and smokeless "Dead Shot" have given excellent satisfaction. The quality of a powder is never known until it is tried out. We want you to "try out" Dead Shot.

Send us your orders to-day.

Peerless

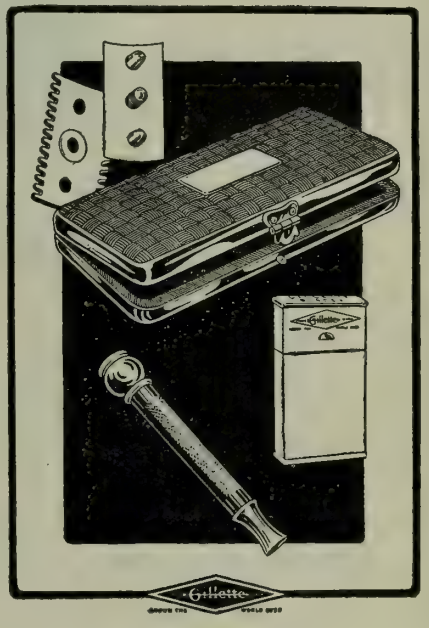
Sight Feed Lubricators

Peerless
Sight Feed Lubricator

When you are asked for a Sight Feed Lubricator tell your customer about the NEW PEERLESS "made in Canada." It is the only one that gauges the amount of oil in the cup up to the last drop. It is the only one that has a patent vent in the filler, permitting all air in the cup to escape when filling with oil. This saves oil. There are no valves to jar off and become lost. The Peerless will feed in cold weather, as the oil is constantly kept warm. It is the most reliable lubricator sold in Canada to-day.

Tell your customer this and he will buy the PEERLESS and thank you afterwards that he did.

They cost the Dealer less money than the "other kinds," and can be sold for more money. That's the way to make money.



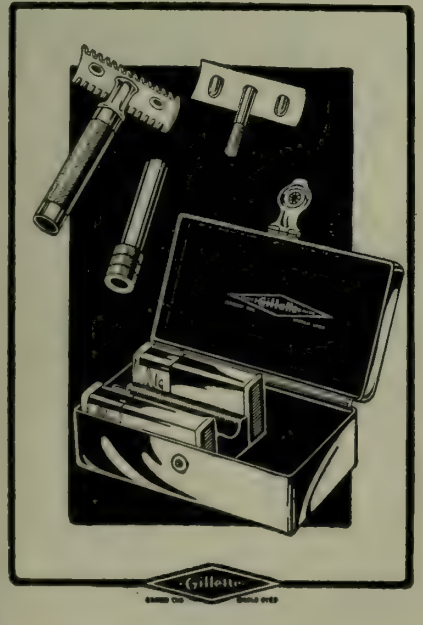
MANUFACTURED BY

Penberthy Injector Company, Limited

WINDSOR, - ONTARIO

The GILLETTE Deserves Real Salesmanship

And Pays Well For It.



The **GILLETTE** Safety Razor is a specialty—a proposition mighty different from a staple like a keg of nails. It deserves a different type of salesmanship—and pays well for it.

Your nail sales are limited, absolutely, to the quantity your customers **have to buy.** When they need ten pounds they come to you and buy ten pounds, though you may never have displayed a nail or tried to sell one. Salesmanship is unnecessary, and the best of it could scarcely increase your sales.

But your **GILLETTE** sales are practically limited only by the quality of your salesmanship. You may sell hundreds, dozens, or none at all, according to the way you handle them.

Nearly every man in your neighborhood is a possible **GILLETTE** buyer. He has read our advertisements, and probably talked with enthusiastic users, and is convinced. He **wants** a **GILLETTE.**

But he **can** get along in the old way, without it, and if he is an average human he probably will, until you add **your salesmanship** to our advertising (or some other dealer does).

A GILLETTE Depot Sign on your store front—a snappy **GILLETTE** window display—a tempting lay-out, on counter or in silent salesman, of the handsome Pocket Editions, Standard Sets and Combinations—a tactful suggestion to the customer who is leaving—a **skilful** demonstration of the fine points of the **GILLETTE**—this type of real selling ability will bring in an amount of **extra business** that will surprise you.

Try it out between now and Christmas. Push the **GILLETTE!** You have no other Christmas line quite so good.

Order **now** for November or December delivery. We can fill orders received now, on the date specified, but cannot guarantee to do so when the rush is on.

The Gillette Safety Razor Company of Canada, Limited

Office and Factory: 63 St. Alexander St., Montreal

Pure Manila Rope

When a buyer specifies "Pure Manila" he naturally thinks he will get a first class, high grade rope, but that is not always so. "Pure Manila" sometimes means little more than the hackneyed term "No. 2 Manila," "Hardware Manila," etc. This is because Manila fibre is produced in such a variety of grades. Some of it isn't fit to make into rope, and a rope made from it isn't fit to use—some are too fine and expensive.

PLYMOUTH ROPE

"The Rope You Can Trust"

PLYMOUTH rope is all made from the happy medium which gives a handsome, durable, economical rope. This fibre we carefully select from the entire world's supply. We make no second grade. PLYMOUTH is always good and always uniform.

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

How We Are Specialists

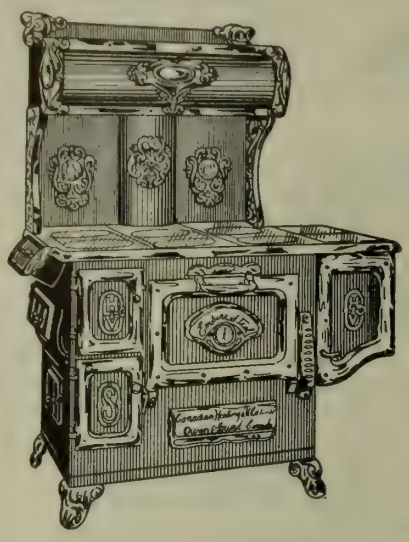
Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

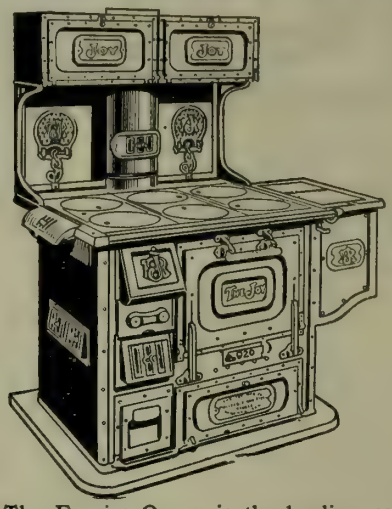
A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

"Our Plan"

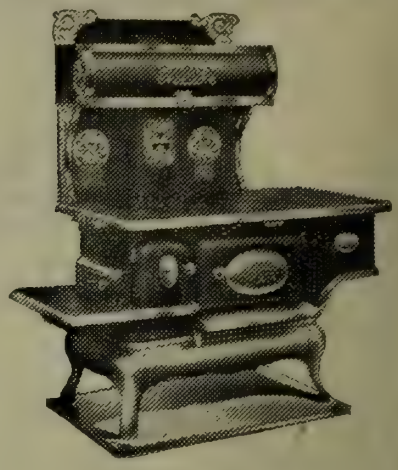
We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.



We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.



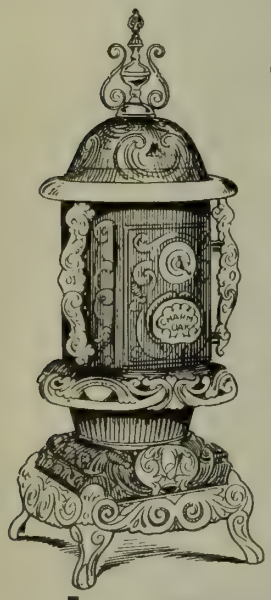
MALLEABLE IRON RANGE CO.



Beaver Dam, Wisconsin

ARE YOU HANDLING **Our Three Leaders?**

The Empire Queen
The Empire Steel
The Joy Malleable



The Empire Queen is the leading cast range, and is guaranteed. It has every up-to-date convenience—thermometer, coal grates on slide, handsome nickel dress and plain smooth castings.

The Empire Steel is a range that is built to wear, and comes in a handsome nickel dress. It has a perfect fire box, two flues, a large boiler door, as well as a quick heating and interchangeable reservoir.

The Joy Malleable is a range that will not warp, crack or break. It is manufactured in four different sizes and is the most perfectly constructed range made in Canada. It embodies all modern improvements and features.

Easy to operate—Easy to sell

The latest triumphs in Fuel Saving and Heating Stoves are the two illustrated. The

"CHARM OAK" and "PERFECT HOT BLAST"
(on left) (on right)

In the "Charm Oak" a special construction does away with the smoke nuisance at the door so common in the Oak stove, and this stove is designed upon the latest lines for convenience and economy.

The "Perfect Hot Blast" is the latest and most up-to-date hot blast and smoke consumer on the market. It has extra large radiating surface and improved ash pit, shaking door and air-tight construction.

FAWCETT RANGES were awarded a Diploma and Gold Medal at the Dominion Exhibition at St. John this month.

They are pre-eminent for cooking qualities, durability and heating power.

Moreover, there is a splendid profit for the dealer handling Fawcett Stoves and Ranges. Send for catalogue and details.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

GET A CROWD AROUND YOUR WINDOW

by giving a window demonstration of the "Perfect" Gas Controller. This is a handy little patented invention, perfected after years of expenditure and experiment, that reduces gas bills from 15 to 50 per cent.

Every gas user is a probable customer for the

"Perfect" Gas Controller

We are appointing agents, with exclusive territory, preferably hardware dealers, in every town where gas is used, and agents already appointed are making extra good profits. The "PERFECT" is a very simple device that automatically controls the flow of gas, allowing just enough gas to flow to the light jet or stove burner, no more and no less, to produce a clear, steady light; free from the noise and excessive heat caused by too little or too much gas.

If there is a gas works in your town you can make money selling the "PERFECT."

The Hardwareman's Fall Stove Selling Campaign

The Best Season to Push Stoves—Mail Order Competition Not Felt by Dealers Who Use Progressive Methods—A Thanksgiving Dinner Window Display Suggested—Personal Letters and Sales Stimulators — Samples of Stove Advertisements Used by Hardwaremen in Various Parts of Canada.

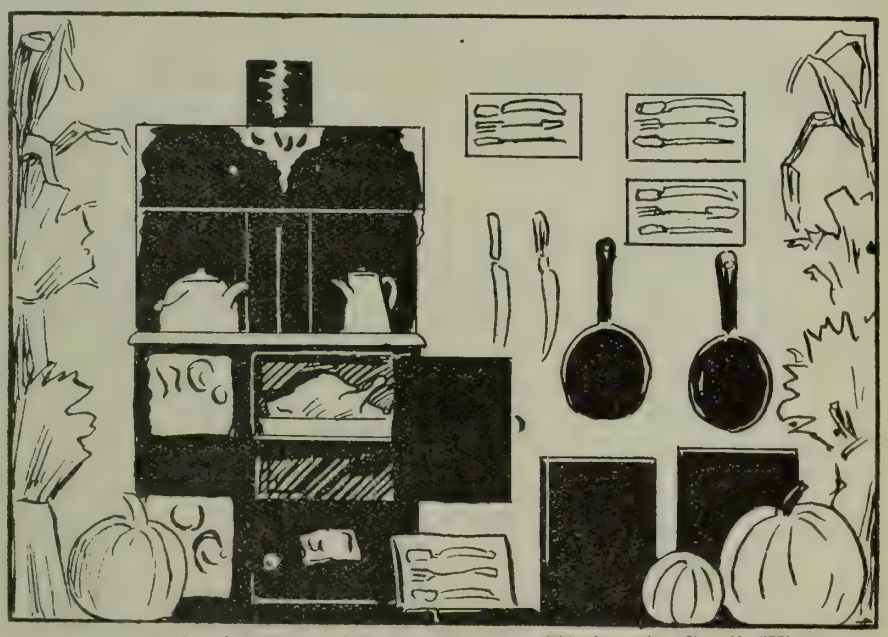
By Weston Wrigley.

October is one of the best stove selling months in the year and the retailer should use every force at his command to dispose of as many ranges and heaters as he can, while also rushing his furnace installation and tinsmithing staffs to the utmost extent in order to clear up as much work as possible before rough winter weather arrives.

While the range peddlers and the mail order houses make their competition felt in some districts they are not feared by stove dealers who know their business and take advantage of the advertising helps supplies by the stove manufacturers. A stove manufacturer who returned to Toronto last week from the Pacific Coast visited numerous towns in the Western Provinces and heard very few complaints regarding these forms of competition. It is, therefore, apparent that retail stove dealers have ceased to bemoan the loss of trade to competitors with more progressive stove selling ideas, and adopting new ideas themselves, they find that they are better equipped to serve local customers and but require energy and application to not only hold their own but also greatly increase their trade in spite of outside competition.

Stoves in the Window.

Stoves are bulky articles to show in the window but this objection should not prevent their use there. Even the smallest window can accommodate one range or heater, together with some kindred articles. And at certain seasons, during October, for instance, a special display can be arranged by utilizing the approach of Thanksgiving Day to arrange a harvest and Thanksgiving dinner window trim. A suggestion for such a display is shown in the accompanying sketch, a range, with a kettle and teapot on top and a roast turkey in the oven being the centre piece. Carving sets and cooking utensils filling in the background, with sheaves of wheat, stocks of corn and pumpkin as the trim in the corners and on the sides. "Cook your Thanksgiving dinner in a ———— range," would be an appropriate display card in such a window, while an ad in the local papers drawing attention to the window display might read:



IT IS FALSE ECONOMY

to buy a cheap article, above all a cheap stove. If it's cheap in price it's certain to be cheap in quality. A stove is seldom bought—then buy the best. It pays.

It's a good plan to hitch up the ad. and the window together as if curiosity can be aroused by referring to the window in the ad, probable customers will make it a point to see the display. And once in front of the store the window, if it is an attractive one, will encourage customers to step inside. If the ad. writer, the window trimmer and the clerks work together sales are sure to increase.

Sales Stimulators.

If it is deemed advisable to offer some special inducement to encourage the movement of goods the merchant might offer "a turkey with every range sold before Thanksgiving Day" or "half a ton of coal free with every stove sold" cards announcing the offer being displayed in the window and a notice sent to the local papers for insertion in the reading columns.

Suggested Trim for Thansgiving or Harvest Window in Small Window.

Another plan to stimulate trade is to concentrate the entire efforts upon stove sales for one or two weeks in each year. For five years past the Powell Hardware Company have adopted this plan, with the result that they have sold more ranges in the five years than they did in ten years previous. They make this week sale twice each year, October 16 to 21 and Februrary 16 to 21, establishing two special sales on ranges each year, giving their entire attention to ranges those two weeks. They send out special invitations by mail three days before each sale begins and advertise in the local paper with a half page space two weeks in advance, besides circularizing the territory thoroughly. This has resulted in an increase on their general business in stoves, heaters and housefurnishings due to the thorough advertising done and it has also done more to decrease mail order competition than anything the firm has ever tried.

Personal Letters.

While newspaper advertising is undoubtedly the most important means of bringing stoves and ranges to the attention of possible customers, personal contact counts a whole lot and the merchant who makes a personal canvass for business has the best chance of making sales. It is impossible, however, to canvass everybody especially in the busy fall season so personal letters can be resorted to with reasonable assurance of their bringing results if carefully prepared, well printed and sent out on good paper to a carefully compiled mailing list. A saving of 50 cents or $1 on the printer's bill for a cheap job is poor economy on a circular which you hope to be the means of selling a dozen or more ranges.

In the compilation of a circular letter special attention should be made to grip the customer's attention in the opening paragraph in order to ensure its being read through to the end. Here, for instance, is a good sample of circular which might be sent to a list of customers who can reasonably be expected to pay cash for a good range:

My Dear Mr.....;

Your time is valuable, I know, but there is something very important on the subject of stoves and ranges that I would like to say to you. In brief, I have

now on exhibition at 183 Main Street, a magnificent assortment of the 1910 patterns in the famous ———— line. The new models are so exceptionally attractive and possess so many advantages in economy of fuel, cleanliness and durability, that I know they will appeal to you, whether you had expected to buy anything new in stoves this year or not.

Some interesting facts are given in the enclosed booklet, but it takes a personal inspection to appreciate what the ———— really are. I would feel honored by a call from you. Should you decide to make a purchase, you would have a stove or range that would be really worthy of your fine home, and a constant source of satisfaction to your family. If you don't buy, it will be a pleasure to show you the line, anyway.

An early call would enable you to reach a decision before the cold weather weather sets in.

Yours very truly

.....

Some Sample Stove Ads.

On the opposite page are nearly a score of sample ads. used by Canadian hardwaremen to feature stoves and kindred lines. There is quite a variety in style, some using cuts and others quoting prices, full descriptive matter is given in some while in others the hardwareman has been content to give a list of some of the goods to be found in his store.

The two Orillia ads., the Orillia Hardware and Gilpin's Hardware announcements are both likely to bring results. Liberal space is taken and the printer used good judgment in display. But thought and logical argument is put into the ad. copy and that is what counts. These ads. will repay study.

Lambert & Earle's ad. also contains a good logical talk on the quality of their goods and the necessity of goods of quality being used in the fruit preserving season. It is the best of two ads. sent to Hardware and Metal and the ad. writer and printer are to be commended for this sample of their work. It would be strengthened, however, by featuring some article as a leader and quoting an attractive price as an inducement to visit the store.

Don't Crowd the Ad.

The three single column ads. clipped from London and Napanee papers show three distinct types of ad. writing. Westman's Hardware use their small 3½ inch space effectively by having a striking introduction, a short talk and address in bold type. J. E. Young & Co., another London firm, do not quote prices but they repeat their catch phrase, "the little hardware with the big business" and feature a single line, saying just enough to allow a good display to be made.

M. S. Madole's ad. on the other hand, appeared in a small country paper where space is cheap and should have occupied at least double the space used in order to say as much as is printed in the four-inch ad. The printer cannot be blamed for its poor appearance —that is, providing he had stamina enough to tell the advertiser he wasn't going to get value for his money by trying to squeeze too much into his space. The long talk wasn't good copy either. It said:

> 1910 is half gone and now as we are starting the last half of the year we are glad to be able to say that we are satisfied with our spring trade. In fact, we did more business in June than in any previous month in the history of the firm, etc., etc.

That isn't the kind of talk which appeals to customers. They will judge a store's success by its appearance and the progressiveness of its window displays and ad. copy. A few personal friends may like to hear how a man is getting on, but their business is cinched anyway, and the ad. should be written to interest those who aren't regular visitors to the store. And just as the salesman who wrote that ad. never goes into strange stores unless he is induced to go there in search of some bargain he wants or some article he is in need of, so should he try to write his copy to induce strangers to visit his store. If he hasn't a bargain to offer tell something about his goods, something interesting and seasonable. And don't scare away possible readers by trying to say too much in the space taken. Display is as important in a newspaper advertisement as the firm's address.

Well-written Ads.

Albert E. Code's ad. is a well written personal talk in which he offers a bargain of two only two-burner oil stoves for $4.75 each, and follows this up with an interesting paint talk, prices being quoted on several lines. It is excellent copy, but too dull and commonplace in its display. The fault here appears to be with the printer. The style is uniform but lacks in attractiveness.

H. Coolican's ad. occupies about the same space and the printer has put life into the copy by bringing out in black type the lines and points which deserve special emphasis. The style adopted by the printer is uniform and his work will help to make the ad. bring results. The writer of the ad. is also to be commended for the preparation of his copy, although he has tried to crowd in just a little too much. A little more added to the opening talk about giving a stove to the lady of the house as a Christmas present, and the omission of some of the matter devoted to general lines at the bottom would have improved it some.

H. D. Moss' ad., written in an altogether different style, is also set in a very effective manner by the printer and deserves commendation as an ad. likely to draw trade.

Washing Machine Ads.

J. P. Straube wastes part of his space in the big heading devoted to "Pioneer Hardware." This might very well have been combined with the phrase "the hardware man" at the bottom of the ad. and the top line used for some such phrase as "Labor saving in the kitchen," "Let the machine do the hard work," or "Ever tried a washing machine?" Mr. Straube devotes his entire ad. to one line and if he follows this plan and changes his copy every week he ought to get satisfactory returns for the money spent.

Bent & Cahoon also feature laundry goods in their announcement, but their copy reads like the index page of a trade catalogue. Imagine a customer going into one of Bent & Cahoon's stores and after telling a clerk that she wanted some laundry goods to hear the salesman string off a list of all the goods the firm handled in that line. But he wouldn't do it. He'd pick on one article, explain it, emphasize its advantages over similar goods, tell the price and try to sell it. The ad. writer started off well with "Wash-day Sundries," but he fell down there and failed to use true salesmanship methods.

Descriptive Matter.

W. S. Piper's ad. writer also failed to take advantage of his opportunity. He commenced with the good thought that the iuppermos thought in every housekeeper's mind was a good range and then told familiar stories about "selling more than ever" and "best of their kind." A convincing sentence about the "Art Garland," and an invitation to visit the store and see it demonstrated would have been more effective.

Mark Dumond goes to the other extreme by making a most descriptive talk about his line. He says: "Your kitchen will never be complete until you have a Sask-Alta range. It possesses not only strength and beauty, but embodies as well the constructive skill that makes for the greatest utility at least fuel expense, etc." The ad. looks well, it has a goodly supply of white space to relieve its heaviness, but it would have been more effective if some points of emphasis and price talk had been displayed prominently.

Fred W. Karn's ad. appeared in a well-known daily paper and be it said to the shame of the publishers that this ad. looks far better than others of Mr. Karn's announcements clipped from that paper. The type is broken and battered out of shape, the rule work is bent and disjointed, the composition and display is very poor and altogether the appearance of the ads. is such that some merchants would refuse to pay for them. Mr. Karn uses some good ideas in his ads. and he changes them constantly, but he ought to insist that the printer must co-operate with him in making the ads. attractive to the readers of the paper he pays good money to put his message before.

Connor & Livingston use a small double column space very intelligently, giving considerable descriptive matter and the price of each stove and range mentioned. Their ad. occupies less than half the space used by W. D. Cameron, and it is safe to say that it will sell double the quantity of goods, disposed of by the larger ad., which merely contains a list of goods.

Get What You Pay For.

Too many men think only of the money paid for advertising when they

sign an order for the ad. or a cheque for its insertion. But the cost of the space should be considered every time copy is prepared and an effort always made to write matter which will interest readers and induce a sufficient number of them to visit or send to the store for goods. While the value of newspaper publicity cannot be judged solely by the direct results secured, it having value in building up and maintaining the prestige and good will of the store, the copy which will "pull" direct results is worth a whole lot more than that which merely lets possible customers know that the firm is still in business and a new proprietor has not yet taken over the store.

GILPIN'S HARDWARE

People who Marry in Haste

often have the experience promised by the proverb of "repenting at leisure." The same argument in favour of forethought and circumspection applies to choosing a stove. Buying an expensive stove generally means that, for better or worse, you are wedded to it for life. If it happens to be a good stove, that means a life-time of comfort, of health from proper cooking, and of economy in fuel. If, on the other hand, you are saddled with a poor and unsatisfactory baker and heater, there is no computing the years of discomfort and waste which follow

We sell (we believe) the best Range made or sold in this Dominion. It is called

The "Canada"

and represents the best that has been achieved by many years of experience and experiment in looking for perfection in this line. Buy no stove till you have seen the "Canada," and allowed us to show you the points in which it excels all others. It is simply perfect. Scores of ladies now using it will tell you so Not one of them has a fault to find with it. Don't marry yourself in haste to some inferior range or stove, and repent at leisure when you see how much better your neighbours have done by coming to us.

A splendid range of other Cooking Stoves and Ranges, and the best Heaters in the market, in all sizes and prices.

Your Kitchen

will never be complete until you have a "Dunn-Alba" Range. It possesses not only strength and beauty, but sanitation as well, the construction and that makes for the greatest utility at least fuel expense. "Dunn-Alba" Ranges are made in the oldest and largest stove foundry in Canada and manufacture, consequently of the best materials obtainable and to the most approved standard

It is constructed with a view to Warm to adjustability suited for two-months cooking

Following are a few of the features that make it the best all-round range in Canada.

The grates are double duplex (patented) and used only on "Dunn-Alba" ranges. No one grate can be operated independent of the other, and in shaking down the fire no waste of fuel occurs. Ordinary grates allow fire to fall through on the ash pan. Consequently heat is causing waste. Long fusion grates can be used if desired.

A direct draft damper (patented) is at the front of the range, and operating it removes no smoking over the hot cooking plate as with other ranges having the draft at the back. "Dunn-Alba" patented side grate is another cooking feature.

The lift top (patented) opens on this heater or toaster can set level, and, therefore, cook or broil evenly. Most other ranges have the fire box across. The fire or door on "Dunn-Alba" can be opened independently of the lift top.

The smoke pipe can be connected either on left or at back of range. If connected at back, the entire cooking top can be used for cooking, giving more surface than other ranges.

The cooking top is burnished (not ground), leaving a polished surface which requires little polishing to keep bright.

Automatic drafts are at both ends of fire-box to eliminate the fire at either end.

The ash pan is extra large and has steel shelves to divert all ashes into pan.

Oven rests well is flanged preventing all heats, and giving uniform flours.

The reservoir (patented) is so made that it can be connected or detached by any person, as he is at times being necessary.

Polished edge is removable when cooking is necessary

Adjustable asbestos front shelf with nickelled edge.

Fires are fixed so a attempt to retain the heat in the oven

Water fronts can be had for heating boilers of any size.

Panel shelves are high and wide. The spacing and adjustments are ready to put up. Some improvements to Dunn-Alba ranges at moderate and practical. Dunn-Alba body of stove material for the price and is a winner, no other range can be so true.

High warming shelves or high warming ovens can be connected at any time.

Send for free, handsomely illustrated booklet about the "Dunn-Alba."

Below great bargains also in odd sizes of stoves and ranges, which we are clearing out at 10 per cent. below regular price.

Refrigerators

Our refrigerators will keep anything you put in them, whether it be ice, or food. They are very easily cleaned, and are economy to every purchaser. We have them at 10 per cent. off regular prices from $16 up.

An Active Fall Sporting Goods Season Expected

Making a Success of the Department—Pointers to be Followed by all Merchants—Gymnastic Supplies are Worth More Prominent Attention—A Window That Proved a Good Draw—The Renting of Guns Should be Considered — The Promotion of Shooting Tourneys—Order Confidently.

Reports from all over the country are presaging a fine sporting and athletic season. Game is very plentiful, while in all directions preparations are in vogue for giving vent to the rapidly developing desire for recreation that is being shown generally by the younger generation. As one hardwareman said recently there never was a better opportunity for a dealer to make money out of his sporting goods department, if he only took the trouble to give the lines a chance. "In what way?" he was asked, and the answer was, "by good intelligent displays; by giving the goods a prominent location in the interior, by taking an interest in the purchase of each customer; and by acquiring a reputation in the community for being a devotee of sport oneself." There is no doubt that these remarks succinctly sum up the situation.

If a merchant only follows out the advice he is bound to make a success of his sporting goods department, and it must not be forgotten that a successful fall season not only means a good profit extending over this term, but that the merchant at the same time is more firmly establishing his position as the sporting house of the the community. This is a very valuable asset. Once become recognized as the "right" store and sportsmen will flock to the merchant.

Sporting Window Display.

Sporting displays should be run regularly now, and care should be taken that all the branches have equal share of attention. For instance some merchants think that the only display worth showing is a gun and ammunition one, and that football supplies and gymnasium outfits are not sufficiently interesting. This is a great mistake. Hardly any line which can be fairly described as "sporting" is without some points of attraction, even to those who are not of a sporting frame of mind. Even the simple home developer, we venture to say will command more attention than many a prominent article of hardware.

A window should certainly be devoted occasionally to gymnastic supplies. Here there is a consumptive field that is ever widening as the various organizations realize the value of physical exercise both to young and old. Very few social organizations are now without gymnasiums, especially in the larger communities. But there is a great scope for merchants in less populated districts. Many a country district must offer a fine opportunity for a dealer to encourage the physical exercise movement. If there is a social club already in existence then his work is so much easier. If not then he should start to agitate for some such organization, and offer his services in promoting it. Many hardwaremen are not alive to their opportunities. They do not seem to realize the advertising they can do if they only got out among the sporting men of the community, and pushed forward the means whereby sport and physical exercise can be indulged in.

A Competition Window.

In regard to the display of hunting lines one merchant found that very good advertizing resulted from a competition window. He made a trim of shot gun shells, and offered a prize in the shape of a hunting coat to the competitor guessing nearest the number of shells in the trim. This was rather a good idea as it did not interfere with the whole window, and thus the merchant was enabled to show other lines as well. The great fault of many of these competition windows is that they spoil the outline for other goods. A good way to interest the sporting men in the store is to post bulletins as to prospects for sport in the various sporting districts reached from the locality, and the luck that the early sports are having. All such things are helpful to the hunter and is appreciated by him. It induces him to visit the store, and familiarizes him with the place, so that in future if he wishes to buy anything of a sporting nature he instantly thinks of the store, and instinctively turns his steps towards it. The same with any athletic series going on. Post the results so that the store gets identified with every sporting movement that is on foot.

Renting Guns Helps Trade.

Merchants should pay more attention to the renting of guns than they do. Not only is this a good means of making a profit on old stock, but it is a fine way of developing a furure customer. Many a young fellow, invited out for a day's sport, has to refuse because he cannot put his hand upon a gun, and there is no opportunity to rent one. Supposing that the merchant can supply this man with a good weapon. The latter goes off, gets a good days's pleasure, even though he may shoot little else than the branches of the trees. He becomes enthusiastic, however, and makes up his mind forthwith to go in for the sport properly. Thus the renting of a gun means a good sale to the merchant. In the renting of guns the merchant is indirectly building up future business. Leaving out the question of rent there is the sale of ammunition to be considered, and other odds and ends that the renting necessitates. Of course the merchant must not take brand new guns out of stock to rent them, but we venture to say that there are very few stores who have not one or two guns that could not possibly sell as new lines which would come in very well for guns to rent.

Promote Shooting Meets.

We have often advocated the promotion of shooting meets as an excellent way not only for advertizing the store, but as a direct bringer in of business. A shooting tournament was recently pulled off by a hardware store in the States, and it was so successful that the attempt is worth describing. The firm undertook the whole burden of the affair. It not only arranged for the prizes and other expenses, but published a programme and sold the advertising space to various sporting goods makers. The advertisements were intermingled with the pages containing the programme and other information concerning the meet. The large jobbers and manufacturers were asked to help in the prizes, which they did. The tournament lasted three days, each day having its special programme and being set aside for a certain kind of competition, so that the contestants could plan their entries according to their tastes. The first two days were devoted to clay targets, while on the last day there was a special programme of live birds. In addition to the regular prizes a number of small ones, such as gold scarf pins or little hunting accessories donated by some of the firms advertising were offered as consolation prizes. The meet was a great success. In a venture like this the dealer does not look for any immediate profit, but only for future ones. He must be content if he comes out on the right side. All he should care about is the success of the undertaking. On the other hand he has done his store a great amount of advertising, and his reputation has gone up in the minds of all who are sportingly inclined. This means dollars and cents later on.

Upbuilding the Department.

An authority writing on the promotion of the sporting goods business says that one of the best means is for a merchant to be a good fellow and cultivate a personality that creates the impression in the mind of every customer visiting the store that the dealer has the desire at all times to do anything in his power to promote the interests of the customer. This personal touch to the business is often a very important factor in the success of the sporting goods department where the class of custom is, in many ways, different from that of buying other kinds of merchandise. The stores that cultivates it gets the business, and the merchant should try and instil it in his clerks as well as himself. If customers want to see goods, show them all you have, and let them look as long as they want to look. Give them the impression that it is a pleasure to serve them. More than that bring out the new things for their inspection, since even if a sale is not made, it is a chance to advertize the novelties to an advantage.

The stocks of skates, hockey sticks, snowshoes, should be carefully looked after, and the dealer should place his order with the jobber as soon as possible. Indications are that a fine consumptive demand will show up for these lines and remembering the difficulty that many dealers had last year in sorting up in some sizes owing to the demand it would be well for merchants to buy in better strength. Snowshoes were somewhat slow last year, but the weather was not altogether too favorable, and lumbering operations none too good. There is no reason, however, why the weather should not make full amends this time, and certainly lumbering prospects are much more favorable. In all directions, therefore, things look good, and the way in which sporting goods are moving from the jobbers show that many dealers are confident as to their sporting demand this fall.

Hardware and Metal Subscribers' Letter Box

Any Question on Trade Subjects Will be Answered by the Editor in This Department. Do You Want Any Address, Any Special Line of Goods, Anything Relating to the Hardware Trade? If Inquiry is of a Nature That the Correspondent Does Not Desire Publicity, he Can Use Initials or Nom de Plume.

Caldwell's Lightning Bits.

A. Koenig, Paris, Ont., asks the name of the makers of Caldwell's Lightning Bits.

Tower & Lyon Co., 95 Chambers Street, New York.—Editor.

Go-Cart Wheels.

J. D. Quail, Fernie, B. C., asks for the name of the manufacturer of a machine which can be used to put on new tires on go-carts, baby carriages, etc.

Gendron Manufacturing Co., Toronto. —Editor.

Stove Repairs.

A. E. Dickson, estate of M. S. Sutton, Andover, N. B., asks for the name of the firms making the "Toronto" and "Semi-Plain" cook stoves.

Can any reader supply this information?—Editor.

Sewing Machine Repairs.

James Kingsboro, Coldwater, Ont., asks where repairs for Empire sewing machines can be bought. The address on the machine is the Empire Sewing Machine Co., Toronto, but the postal authorities cannot locate them.

The Empire was formerly sold by E. C. Hill, Toronto, who sold out to the T. Eaton Co., who can supply repairs. The legs are made at Guelph, the table at Hamilton and the head in the United States.—Editor.

Laundry Dryers.

W. J. Hermiston, Walkerton, asks for the name of a firm making or handling hot air laundry dryers.

Meyers Bros., Church and Lombard streets, Toronto, have been asked to send catalogue of their laundry supplies.—Editor.

Cream Separator Repairs

R. C. Puddicombe Co., Ayr, asks where they can get repairs for Oxford Cream Separators, formerly made at Durham.

W. J. McFadden, Durham, can supply these. If rubber rings are required, the rings used on the "Capital" fit the "Oxford."—Editor.

Furniture Trade Paper.

J. B. Furness, formerly a hardware merchant at Sunderland, Ont., and now in the furniture business at Acme, Alta., asks if the MacLean Publishing Company publish a furniture paper.

No. The James Acton Publishing Co., Toronto, publish the Furniture and Upholstery Journal, monthly. $1 yearly —Editor.

Tin Pattern Books.

Richard Howes, Lumsden, Sask., asks for the prices of the "New Metal Worker Pattern Book," and the "Tinsmith's Helper and Pattern Book," pocket size.

These books can be supplied in Canada by the Technical Book Department of the MacLean Publishing Co., Toronto. The price of the first named is $5 and the latter $1, postpaid.—Editor.

Slate Roofing

Turnbull & Cutliffe, Brantford, asks where they can buy slate cutting and punching machines, and also addresses of Canadian and American slate dealing firms.

John D. Emack, Stephen Gerrard Building, Philadelphia, sells the machines and also deals in slate. The Slatington-Bangor Slate Syndicate, Slatington, Pa., is another concern selling to the trade. The Rockland Slate Quarries, Rockland, Quebec, sell their output through the Roofers' Supply Co., Toronto.—Editor.

Stove Repairs.

A. W. Holliday, Millbrook, asks where he can procure repairs for Regal Peninsular heaters, manufactured by the Laidlaw Manufacturing Co., Hamilton.

The Regal Peninsular baseburner is now made by Clare Bros., Preston, Ont., from whom repairs can be secured.—Editor.

Address of Toronto Firm.

A. W. Holliday, Millbrook, asks for the adress of the head office of the Ontario Lime Association.

Write 118 Esplanade street east, Toronto.—Editor.

The clerk who begins to be discouraged will feel better if he stops to realize that the man who owns the store to-day was in his position some years ago.

A HARDWARE ENCYCLOPEDIA.

This "Letter Box" page is capable of being made the most interesting department in Hardware & Metal, if retailers, traveling salesmen and clerks assist by forwarding enquiries regarding any subject directly or indirectly connected with the hardware trade.

The questions asked by one reader will probably be of interest to dozens of others, so there cannot be too many questions forwarded to us.

Ask us. We probably know, and if we don't we'll try to find out.

ANOTHER BIG MERGER.

Announcement was made in the daily papers this week of the completion of the organization of the Steel & Radiation Company, Limited, referred to in Hardware & Metal of August 10.

At a meeting held on Sept. 31, arrangements were completed for the taking over by the new company of the plants of the King Radiator Company and the Expanded Metal Co., both located in Toronto, and on Oct. 5 the deeds concerning the transfer were registered. The companies will continue for a time, however, under their former names.

The capitalization of the new company is $5,000,000, one-fifth of which goes to the promoter, G. H. Brown, for promotion purposes, and the balance, it is planned, will be issued as additional companies are taken in. Negotiations are now on with two radiator companies to join the merger. The officers of the new company have not as yet been announced but R. J. Cluff, formerly manager of the King Radiator Company, is to be manager of the combined companies, and it is understood that Wallace W. Near, president of the Ontario Iron and Steel Company and the Page-Hersey Iron and Tube Company, with plants at Welland and Guelph, is to be president.

Behind the present merger a still larger consolidation is in contemplation. It is said that the Ontario Iron and Steel Company declined to enter the Steel Company of Canada $25,000,000 merger, the men interested having in view the formation of another big consolidation of iron and steel producing and consuming concerns, the present Steel and Radiation Company being merely the first step towards the ultimate aim, just as the merging of half a dozen companies into the Canada Bolt and Nut Company was a step towards the Steel Company of Canada merger.

Asked regarding the advantages accruing from having a consolidation of concerns such as the Expanded Metal and King Radiator companies, Thomas Horne, manager of the Expanded Metal Company, said that there would be savings made by using the same sales staffs for selling the products of both companies, all of which are used in the building industry and specified by the same architects. He further said that there would ultimately be savings in manufacturing by having the same company control iron furnaces and subsidiary companies which would use the products of the furnaces.

Rigid examination of all one's tendencies and a determination to do business regardless of untoward conditions will generally be sufficient to remedy any difficulty which may arise in a retail grocery business. Outside influences may be made beneficial, but it is the work done inside that is, after all, most potent in modifying the conditions that reduce, or destroy, profits.

MONEY IN SIDE LINES.

A merchant should carry as many side lnes as his experience, intelligence and business acumen tells him there is good prospects for, and having stocked those lines he should be sure and display them not intermittently but in regular order and try if possible to make the windows have a stimulating effect so that even the person who first on seeing the line has no desire to purchase will be so enticed that in the end he will be compelled to buy. It is a mistake to assume that people know very well that the store carries these lines because most of us are very unobservant unless our attention is forcibly called to anything. A great thing is to make the store become recognized as the "house" for a particular line. When a person thinks of gas fixtures, burners, etc., let him by reason of those displays think at once of your establishment and so with electrical fixtures, sporting goods, fancy articles or whatever it may be. Once the community is thoroughly convinced that they cannot do any better than go to your store when they want a certain article then the merchant is on the high road, and he has only to keep that trade by courtesy and fair dealing.

It is well for the merchant to take time by the forelock. For instance, there may be a district in which there is no electric power at all but this will come sooner or later and directly a merchant hears of any move either by a factory to instal its own plant or by a corporation to go in for supplying public power then he should at once start to direct people's attention to the fact that his is the store for electrical fixtures. There is no need why he should put in much stock until the demand is at hand but he can by a judicious arrangement of a few lines accustom people to the fact that he does carry these things and so when the time comes for lamps and other electrical accessories then the district will at once think of his store. Fixtures are not cumbersome to carry. They do not mean a very tremendous outlay for stock purposes and yet they add a great deal to the merchant's opportunities for trade and as we said lend themselves to any scheme of general display.

HOW WE HELP RETAILERS.

An instance of how retail firms can profit from the assistance given by Hardware and Metal's staff through the "Letter Box" department, is the experience of La Compagnie Martineau, of Quebec City, who recently asked us to supply them the name of firms manufacturing life preservers. Acknowledging the receipt of the information from Hardware and Metal, they wrote as follows:

> "Accept our best thanks for your report on life belts. We have made $50 on our purchase, and this is purely owing to the information you gave us. There is no hardware firm which will not succeed if they read your journal carefully, and follow its advice."

The "Letter Box" department has now grown to be one of the most interesting pages in Hardware and Metal, the inquiries covering a variety of subjects having an intimate or remote connection with the hardware trade. No matter what the inquiries are, however, so long as the answers will help readers of Hardware and Metal in any branch of their business. the members of the editorial staff are at the service of the subscribers to the paper.

BROOM PRICES GO DOWN.

Broom prices have come down from the high figures which were the result of crop failure last year in Illinois, Oklahoma and Kansas States.

Brooms will soon once again be sold at 25 and 30 cents, as was the case before last season's peculiar conditions. In fact, manufacturers state that they have been able to purchase this year's corn at such a price as to be able to do this. It may, however, be a few weeks yet before they will be manufactured, although orders are now being taken for them at the lower prices.

Reports from the broom-corn district, however, indicate that the corn for manufacture of the cheaper broom is not more than the average, and it is only being offered in very restricted quantities.

The corn used for the better quality brooms, those which will sell from 40 to 50 cents retail, is fairly plentiful, and the quality is good.

Since the high-priced brooms have been on the market consumers have been accustomed to pay more than they previously did, and retailers say that they do not believe their particular customers will go back to the lower price. They will rather prefer a better broom at 40 or 50 cents. It lasts longer, is much easier on carpets, and gives all-round general satisfaction.

The more a dealer can educate his customers to a better quality of broom, the better will he satisfy them and the more confidence will they place in his judgment on other matters—and he makes a better profit.

HOW GERMANS SECURE TRADE.

An example of the thorough manner in which German manufacturers seek business is provided by a circular recently issued by the Export-Verein of Saxony, inviting its members to take part in a study trip through Canada for the purpose of gaining an idea of the possibilities of this country as a market for German goods.

The abolition of the Canadian surtax, which practically closed Canada to German goods, has cleared the way, and this forthcoming tour serves to show how thoroughly Saxon manufacturers mean to take advantage of the opportunity.

The trip will extend over several months, so that those taking part are evidently prepared to expend a considerable sum in the confidence that subsequent business with Canada will more than justify the initial outlay, and during the next two or three years we may expect to witness the inauguration of a widespread and scientific campaign having as its goal extensive German participation in the Canadian import trade.

German manufacturers have been directing considerable effort of late to increase their trade in Southern Russia and are said to be succeeding in securing the substitution of Westphalian goods for Sheffield and Birmingham products. The German travelers are keen for business and by hunting up buyers and studying their requirements they frequently succeed in getting orders away from British manufacturers who do business on more conservative lines and whose travelers are inclined to be less obliging in supplying the requirements of customers if they are out of the ordinary run of their products.

The young German salesmen not only offer to sell German goods, but the pro-

ducts of manufacturers in other countries in order to win the favor of customers, but once they get a foothold they switch the business to the German houses if at all possible. For example, the German salesman is too wise to insist that his own special wares are better than British goods.

"Oh, I shall be most happy to take your order for files, tools, or whatever it may be," he will say. "I can deliver f.o.b. Hull in £. s. d., with trade discount. Credit? No, it can't be done. English makers require cash against bill of lading, for which they allow an extra discount of 5 per cent. But if you want credit you have Herr Deutcher's goods of equal quality, delivered at your door, payable in roubles in six months after delivery."

The shopkeeper knows well enough that the "equal quality" is a snare, but under the circumstances he can make more money by the inferior goods, and does not find it to his interest to stock British goods.

SELL ACCESSORIES ALSO.

When you sell a stove—a range or a heater—do you just sell a stove, and nothing but a stove? If you do, you are not making the most of your opportunities.

For instance, every coal range and every coal heater needs a coal scuttle. If you sell the buyer a scuttle, you won't have him back next day complaining that you should have given him one with the stove.

Then, there is the work of putting up the stove. Your men can do this work in less time and can do it better than the purchaser himself. He will appreciate having it taken off his hands. And, while you are at it, find out if he has any other stoves to put up.

Then there is stove pipe. Many buyers of stoves use old pipe with new stoves. Frequently the old pipe is worn thin; often it is as full of holes as a sieve. This is dangerous, especially with coal and gas. It will pay the stove buyer to let you go over his stock of pipe, and he will let you, if you approach him the right way.

With the wood stove you may dispose of an axe; also of a hatchet for chopping kindling. Perhaps the purchaser has an axe which needs a new handle. Sell him one, and get the job of fitting it.

Then there is the matter of a stove brush, and stove polish to go with it. There is also the bright steel ornamentation upon the heater—it is easier by the use of a little forethought, accompanied by a dab or two of polish, to keep this clean, than to clean it once it becomes rusted or even dirty.

Do you ever stop to think that every range has used in connection with it every day of hosts of kitchen utensils. There are pots and pans and kettles and wash boilers, besides a host of new contraptions designed to make cooking better and housework easier. The range sale gives you an opportunity to introduce these things. Maybe you won't land them right away, but keep your eye on that range customer, and follow up with circular talks about kitchen utensils, featuring your new contrivances.

The wash boiler paves the way for tubs, and a wash-board, and a washing machine.

Thus the procession moves on, and it is endless. You can't sell all these things in a day, but you can mention some of them and sell a few. And that is better than selling just a single, big, bright, ungarnished range or heater.

IMPORTANT LEGAL DECISION.

Although the insurance policy of the Brooks-Sanford Hardware Company, Toronto, in the Rochester-German Fire Insurance Company had a clause in it reading, "If the property assured is assigned without the express permission of the company the policy shall be void, but the condition does not apply to a change of title by succession or by the operation of law or by death," and, although that company did assign without the express permission of the insurance company, Justice Middleton, this week, held that the policy was not void. The question arose in the action of Osler Wade, assignee for the Brooks-Sanford Company, to recover $2,402 insurance. The company assigned on October 9, 1908, and the fire broke out on October 20. The Judge held that the assignee is entitled to the money on behalf of the creditors.

THE MERCHANT LOSES.

In a case tried at Toronto this week, a collector for a weekly payment merchant was freed because he was charged with stealing money from customers, which sums he failed to turn over to his employer.

H. C. Macdonald, the prisoner's lawyer, said: "I submit there is no case to go to a jury. The evidence put in only shows that this man had collected certain sums of money from these witnesses. That was his duty. He was paid for it. He was hired by his company to collect those sums. He cannot be found guilty of stealing money from these people."

"That is so," said Judge Denton. "He did not steel any money from these people. The Crown has no case, and the jury will bring in a verdict of not guilty."

The point is an interesting one as it incidentally decides who is the loser of the moneys misappropriated by the collector. The customers having paid to a duly accredited representative of the merchant, are freed from further responsibility and the loss must be sustained by the merchant.

BUSINESS COSTS AND EXPENSES.

The National Association of Credit Men recently formulated the following simple but comprehensive rules for business accounting:

1. Charge interest on the net amount of your total investment at the beginning of your business year exclusive of real estate.

2. Charge rental on all real estate or buildings owned by you and used in your business at a rate equal to that which you would receive if renting or leasing it to others.

3. Charge in addition to what you pay for hired help, an amount equal to what your services would be worth to others: also treat in like manner the services of any member of your family employed in the business not on your regular payroll.

4. Charge depreciation on all goods carried over on which you may have to make a less price because of change in style, damage or any other cause.

5. Charge depreciation on buildings, tools, fixtures, or anything else suffering from age or wear and tear.

6. Charge amounts donated or subscriptions paid.

7. Charge all fixed expense, such as taxes, insurances, water, lights, fuel, etc.

8. Charge all incidental expenses, such as drayage, postage, office supplies, livery or expense of horses and wagons, telegrams and 'phones, advertising, canvassing, etc.

9. Charge losses of every character, including goods stolen or sent out and not charged, allowances made to customers, bad debts, etc.

10. Charge collection expense.

11. Charge any expense not enumerated above.

12. When you have ascertained what the sum of all the foregoing items amounts to, prove it by your books, and you will have your total expense for the year; then divide this figure by the total of your sales, and it will show the per cent. which it has cost you to do business.

13. Take this per cent. and deduct it from the price of any article you have sold, then subtract from the remainder what it cost you (invoice price and freight), and the result will show your net profit or loss on the article.

14. Go over the selling prices of the various articles you handle and see where you stand as to profits, and then get busy in putting your selling figures on a profitable basis, and talk it over with your competitor as well.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MONTREAL.

October 7. Although the markets are very firm in sympathy with primary conditions no change in prices are to be noted, but holders are not offering such good concessions to buyers of large lots, nor so anxious to contract for future delivery.

There is a very good fall movement shown in all branches. Not only is the purely local trade active, but country users are buying steadily, and moreover buying often. The orders are still on the light side, as is only natural under such circumstances, but the aggregate is fairly heavy. As one merchant said, "trading is not spectacular, but it mounts up by the end of the week." The tin situation is still of a perplexing nature, and buyers are inclined to hold off except for metal that is really needed. Copper is in steady request. The advancing tone of spelter due to a bulling movement in the primary markets has quickened buying on the part of those who anticipate that local prices will advance, as assuredly they will if London continues to gather strength. The local demand for imported coal continues very good, while some fair quantities of domestic coal has been placed for future delivery.

Despite prophecies to the contrary the bull operators in London have been holding firmly to tin, and there has not been that terrific avalanche that was expected. It is true that the metal fell away from the early September figures, but there was another big jump during the week. There has again been some strong buying on American account, while spot supplies of Straits tin is being concentrated in New York. Copper is still devoid of interest, the London market supplying the only excitement in the way of slight speculation. Domestic buying in New York is dull, but all the same prices are firmly held the tin situation supporting. Spelter and lead are showing stronger figures in the primary markets, and this, is of course, reflected locally. The iron and steel situation in the States remains much about the same. The decision on the part of the large interests to refrain from cutting prices in order to meet some of the smaller steel concerns, has strengthened the market somewhat, and a broadening of business in some parts is taken as an indication of a better buying movement.

Pig Iron.—The local situation is unchanged. Business is moving along steadily and merchants seem satisfied with conditions. The market is on the firm side, despite the slashing done by agents from over the border. Domestic iron is moving well, and furnaces report plenty of business in hand. We quote No. 1, $18 to $18.50; No. 2, $17.50, at furnace Middlesboro: No. 3, $18; Summerlee, No. 1, $20.50; No. 2, $20; No. 3, $19.50. In the States it is reported that some of the producers of pig iron who have been making extremely low prices to secure contracts both for this year and next year's shipments are less anxious for business and that in consequence some recent orders for foundry iron have been secured by other producers at slightly better prices. This will help to improve the market.

Tin.—Tin is very firm in tone in consequence of the maintenance of the bull control in London. Trade locally has been good, despite the fact that some of the larger buyers are holding off the market as much as possible, taking only what is barely required. Local prices are unchanged, and very little concession is given for good round lots. Despite anticipations in many quarters that after the Banka sale control would not be held by the tin syndicate, the London market has not shown any falling away. It has been very firm this week with one or two big jumps. Immense quantities of metal have changed hands both in London and New York, the spot supplies in the latter place being brought under strong control, but as for the legitimate consumption demand, its strength is not so evident. The insecurity of the market is thus apparent.

Copper.—Local trade has been good, and jobbing prices have remained unchanged. For the time being copper is taking second place in importance. Consumption in New York is reported dull, but the bulling of tin has somewhat strengthened copper, and prices are firmly held. London has been fluctuating a little, but on the whole has not influnced the general market much.

Spelter.—Spelter is very firm under the pressure of the movement in London, but no change in prices is reported. Concessions are not made very willingly for large lots. Trade is good, the probability of local prices being advanced stimulating buying. The English market is steadily advancing and is getting closer to the £24 mark. St. Louis is firm.

Lead.—No change is reported in lead either domestic or imported. The market is much firmer, due to better figures in London. Trade is fairly active. A good consumptive demand in the Old Country with supplies under firm control caused figures to respond. There is quite a bullish movement on.

Scrap.—The scrap market is little changed. Buying is of a steady character. We quote: Heavy copper wire, 11c; light copper bottoms, 9½c; heavy red brass, 8c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3c; No. 1 wrought iron, $12; machinery scrap, No. 1, $16; stove plate $12.50; malleable, $9; miscellaneous steel, $5.

TORONTO.

Oct. 7.—The better trade feeling is showing added strength as the season advances. The undertone to all the metals is hopeful, and just at present business is fairly satisfactory.

There is an easier tone to tin, but sheets and plates are very firm, especially Canada plates, which are particularly scarce. Spelter is steady and is gaining ground.

There is a brighter outlook for steel and iron. Manufactured lines especially are active. Crude metal is not so good, though there are no declines to report.

Pig Iron.—Trading continues to improve slowly. The business now being done is in small lots, though orders are somewhat more frequent than during the past several months. Domestic furnaces and metal jobbers are after whatever business offers, which is an altogether different situation than prevailed in the spring. Quotations remain at $19.50 for No. 1, and $19 for No. 2, f.o.b. furnace, with 50c a ton added for local delivery. Middlesboro No. 3 is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Jarrow is $20.50 and Glengarnock, $22.50.

Tin.—Market conditions are unchanged generally, though the rush for the metal has brought down the price a cent, and tin is now offered locally at 36c. Good business is passing though orders call for small lots only.

Sheets and Plates.—All kinds of sheets and plates are decidedly active with stocks light. Canada plates are scarce and some houses have been compelled to pay higher prices for their supplies than the market quotations. They have in consequence raised their prices from 10 to 15 cents higher than a week ago. Tin plates, too, seem strengthening for an advance. Deliveries of these goods are very slow and behindhand.

Spelter.—Still firm and active is spelter. Sales are highly satisfactory with stocks none too great. The quotation of 6c to 6¼c given last week rules the market at present. There does not seem to be any immediate prospects of a change.

Lead.—This metal is now holding an excellent position on the market. The price is steady and stocks are frequently changing hands. Lead is moving better now than for many moons past. The situation is entirely satisfactory. Domestic lead is at $3.75, with imported 5c higher.

Copper.—The market just now is firm. Copper is likely to become more active. The local quotation remains at 13½c. Both production and consumption are at very high figures.

Old Materials.—No change has come over the situation the past few days. Stocks in dealers' hands are increasing. The prices they are offering are considered high. For heavy copper and wire, dealers are paying 11 to 11½c; for light copper and bottoms, 9¾c; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½c; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

October 7.—A stimulation is noted in fall and winter lines, immediate delivery being taken in all cases. Weather strip, stall fixtures, sleigh heaters, horse blankets, lanterns and lamp burners are all in active request. Lumbermen's supplies are in better demand, and in this direction snowshoes are commencing to move. Boot calks and axe handles have been shipped for some time. Builders' hardware, and general utility lines are steady, and if not showing any decided increase in volume are not falling off.

Sporting goods are prominent. The sorting demand for guns is very strong, while the various accessories are in active request. Skates and hockey sticks are being taken in every case for immediate delivery, and the season looks to be more forward than the average one. Railroad supplies are maintaining strength, the various construction camps being still in active operation. In fact work is being pushed forward vigorously to get through as much as possible before the snow comes.

No important prices changes are announced. The markets are firm and reports as to trading conditions generally are favorable. There is naturally a good tone all the way round.

Seasonable Lines.—Weather strip, snowshovels, horse blankets, stall fixtures are in good request for immediate delivery. Snow shovels are also moving freely. Cutlery has commenced to sell well, carvers, case cutlery, pocket knives, forks and spoons, being in chief request. General lighting goods, including lanterns, and lamp burners are showing strength. Household lines continue to show good movement.

Builders' Hardware.—The demand continues its steady gait, and orders are not only well assorted but well distributed. Locally the demand has been very good, the building figures for Montreal to date being among the biggest on record. The market is firm, and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Sporting Goods.—The sorting-up demand for guns, ammunition, cartridge belts, etc., continues very strong, and jobbers seem satisfied with the trade doing. Skates and hockey sticks are now being taken for immediate delivery. There is an improvement in rugby football supplies, and gymnastic outfits. Snowshoes and toboggans are showing more life.

Bolts and Nuts.—A good demand for all sizes is noticed, and with dealers' stocks on the short side delivery is wanted immediately. The market is unchanged and we quote: Discount on carriage bolts, ⅝ and smaller, 70; machine bolts, ⅝ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—There is a good tone all the way round. Orders are well assorted and delivery is wanted quickly. We quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ⅝, $3.25; 1, $3.25; anchors, 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each.

Wire.—General lines are in fair demand. The market is unchanged, and we quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80; galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal; coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots; plain wire, bright, annealed and annealed and oiled, $2.35 base; staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Oct. 6.—The hardware business has this past week shown some advanced trading over a week ago, but the volume of goods going out in shipments might be heavier. The condition of trade is satisfactory, however.

Demand is not confined to a few lines. On the contrary calls are made for a great range of seasonable fall and early winter articles. Builders' hardware, of course, is active, and horse goods and cattle protective articles are prominent. Small farm implements for present use are going forward on "rush" orders, and barn and household goods, too, are showing a splendid call. Stoves and ranges are especially brisk.

Booking of wire goods for next year as also harvest tools goes on, but there are no great signs of life to the orders as yet. Winter goods are not all ordered, and at present the buying is confined to the usual standard and wanted lines. Sorting-up is the order of the day.

Prices run along about as usual. There is a slight advance in copper and brass finished lock sets, also in some lines of pocket cutlery. The only notable change, however, is in brooms, which show a decline of from 30 to 40 per cent. The corn crop this year has been much more successful than last year, and while rain and sun reddened some of the crop in Illinois and Kansas, on the whole there is sufficient long green corn to make possible this year the sale of 25 and 30 cent brooms.

Seasonable Goods.—Sorting-up of fall stocks is going on at present with orders calling for some early winter staple lines. Wire mats, sleigh bells, weather strips, ice scrapers and snow shovels. Horseshoes and nails are moving somewhat slowly this fall, but there is still chance for business. The first fall of snow will no doubt hurry along orders.

Barn and Farm Goods.—Stable lanteens are yet very active as are horse blankets, pitchforks, cow ties and general hardware lines wanted to keep the cattle snug and tight during the winter. Pails are active, and there is still some movement to churns.

Builders' Hardware. — Trading continues good. Business in this line has been more steady this year. Copper, bronze and brass finished and trimmed lock sets have advanced slightly this week. Building papers are in demand. Outside points report a tendency toward easier prices. Metal shingles and sheets are in good demand.

Household Goods.—Broom corn crop reports are sufficiently advanced to conjure with prices for this season of 1910-1911, and manufacturers anticipate a lowering in price between 30 and 40 per cent. Similar quality brooms that retailed at 50 and 60 cents last year will this year go at 35 and 40 cents, and it is quite likely that 25 and 30 cent brooms will again be offered. Kitchen tin, granite and enamel ware, washing machines, mops, clothes baskets, wringers, etc., are the principal lines moving.

Heating and Lighting Goods.—Lamp goods are still prominent, but sales are steady rather than increasing. Sales of gas and electric fixtures, too, are developing into steady grooves. Stoves and ranges are very busy at country points, city business running more to gas ranges and hot air furnaces, the latter of which are making business exceedingly brisk.

Heavy Hardware.—Bars, pipe and rods are becoming active again. Structural iron is exceptionally so. Factory repairs are calling for a variety of metal articles and tools, and also rivets, bolts and nuts. Chain is selling fairly well.

Sporting Goods.—Sorting-up orders of guns and ammunition are passing. Prices are easier than in summer, and no doubt the extra 10 per cent. discount has induced better sales this fall and also made business more steady. Some of the better grades of pen and pocket knives have been advanced, but general cutlery lines while decidedly firm show no increased prices.

Christmas Goods.—Inquiry for holiday and presentation goods is fair. Iron toys are increasing their hold on the trade.

U. S. IRON TRADE.

Cleveland, Oct. 6.—The Iron Trade Review says: Two important developments in the iron and steel market during the past week were the issuing of a new basing card by the leading interest and the independent manufacturers of steel pipe, and the card showing new differentials between gauges of galvanized sheets. In both instances, the new cards came as a surprise to the trade.

The new basing card on steel pipe is a complete re-classification and for the first time in many years, manufacturers make a distinction in the way of prices between lap weld and butt weld pipe. On some sizes of merchant pipe, prices are advanced from two or four dollars a ton, while on other sizes prices are reduced from $2 to $6 a ton. There is also a heavy cut in prices of extra strong pipe, being in some cases $20 a ton. So far, no action has been taken regarding a revision of prices of iron pipe.

The past week has been an exceptionally quiet one, and the market as a whole is rather spotty. With the exception of steel pipe and sheets, prices show little change from a week ago.

HARDWARE TRADE GOSSIP

Ontario.

R. J. Haley, hardwareman and stove dealer, Toronto, has sold his business to J. A. Russell.

E. Holt Gurney, sales manager of the Gurney Foundry Co., Toronto, has returned from a trip to the Pacific Coast.

About $50,000 damage was done to the works of the Goderich Organ Co. by fire on Oct. 1. Plumbers' woodwork is one of their important products.

Arthur F. Hatch, manager of the Canada Steel Goods Co., Hamilton, has returned from a visit to the Pacific Coast with the Canadian Manufacturers' Association.

N. O. Philip, traveler for the Vokes Hardware Co., Toronto, was taken sick at Holland Centre last Friday, and was removed to the Owen Sound General Hospital. He has a slight attack of typhoid fever.

The Peterboro Lock Manufacturing Co. has been granted a fixed assessment of $25,000 for ten years. The company is spending $40,000 in improvements, and 40 additional employes had been added this year.

Two new hardware stores have been opened in Toronto within the past ten days. A. Lutz, lately of Thamesford, has begun business near the corner of Boustead and Dundas, and Mr. Tooze has started in business at 113 Roncesvalles Ave.

A building permit has been granted to the Glidden Varnish Company for a one-storey brick and reinforced concrete grinding mill at the corner of Wallace avenue and the G. T. R. tracks, Toronto, to cost $8,000.

A. W. Poole, has severed his connection as sales manager of the paint department of James Robertson Co., Toronto, to join the staff of Brandram-Henderson, Ltd. It is understood that a few changes and promotions in the latter company are under consideration.

Edward Gurney, president of the Gurney Foundry Co., Toronto, tendered a complimentary dinner to W. H. Carrick, president and general manager of the Hamilton Stove & Heater Co., Hamilton, at the National Club, Toronto, on Friday, Oct. 7, in appreciation of his 38 years service with the Gurney Foundry Co.

Adam Hall, for 32 years a hardware merchant and stove specialist at Peterborough, is giving up that business for the purpose of carrying on a plumbing and heating business on a large scale. He has erected a foundry for the manufacture of many of these lines as well as galvanized iron and tin work.

Joe Bell, who recently severed his connection with Bell & Rochester, hardwaremen, at Haileybury, was in Toronto last week ordering a stock of shelf hardware. He intends opening a business of his own in Haileybury, and has engaged premises in the Ferguson block, now occupied by the Nipissing stores, and will open sometime this month.

Fire did considerable damage to the Percival Plow & Stove Company's premises at Merrickville on Oct. 2. The finishing shop which contained a large number of ranges ready for shipment, was damaged most and the loss will be heavy. The company have another foundry in operation at Newburg, which will help them out to a great extent in filling orders.

Justice Sutherland, at Toronto, issued a winding-up order last week against the Toronto Mica Co., on the petition of H. G. Waterman. According to Waterman, the company was incorporated on July 6, 1909, with a capitalization of $40,000. Waterman has a claim for $225, and he says that the company is largely indebted to the Dominion Bank.

The staff of Canada Glass, Mantels and Tiles, Toronto, tendered a banquet to Jarvis Harrison on the occasion of his retirement from that firm, after seven or eight years service in the mantels department. Mr. John McConnell, on behalf of the employes, presented Mr. Harrison with a diamond ring. Mr. Harrison has become proprietor of the King George restaurant, and the banquet was held there.

Quebec.

R. S. Dillon, hardwareman, Montreal, has been registered.

Isidore Boucher, tinsmith, St. Scholastique, has assigned.

F. W. Jones, of Bedford, Que., was noticed in Montreal this week.

C. A. Abbott, manager of the Rex Flintkotie Roofing Co., Boston, has been on a visit to Montreal.

G. H. Agnew, of Watson & McGregor, Victoria, B.C., was a caller this week on the Montreal hardware trade.

J. B. Damour, Ste. Philomene; V. Lebeault, St. Laurent; J. Lebeault, Longueuil; J. A. Paquin, St. Eustache, and L. I. Matts, Ferme Neuve, Que., have been callers on the Montreal hardware trade this week.

Bert Hodges, of the Sherwin-Williams Co., Montreal, was given a dinner by his fellow workers in the company previous to his leaving to take up another line of work. Covers were laid for twenty, and the little send off was a great success from beginning to end.

Western Canada.

G. O. Wilson has opened a hardware store at Plenty, Sask.

A hardware business has been started at Edson, Alta., by Wm. Hope.

Henry Anderson, tinsmith, Indian Head, Sask., is discontinuing business.

McSherry & Chase are pushing a hardware business at Pangman, Sask.

Geo. Spray, of Earl Grey, has started a hardware business at Gibbs, Sask.

A hardware business has been started at Kerr Robert, Sask., by W. Butchart.

Locey, Hargrave & Co., dealers in electrical supplies, Regina, have dissolved.

A hardware store is being opened at Macklin, Sask., by Heminway & Featherstonhaugh.

A plumbing and tinsmithing business has been started at Chilliwack, B.C., by Chas. Hood.

The P. T. Coulter Co. is opening a hardware and automobile supply business at Calgary.

Lee & Thorrilson, hardware merchants, Delisle, Sask., have dissolved, Mr. Lee will continue the business.

John R. Mears, hardwareman and furniture dealer, Arcola, Sask., contemplates disposing of his business at the end of the year.

NEW COMPANIES.

The Goodyear Tire and Rubber Co. of Canada, holding a Dominion charter, has obtained an Ontario license to carry on business in that province. Clifton H. Carlisle, Toronto, has been appointed attorney.

Canadian Tube & Iron Co., Montreal, capital $1,000,000; to manufacture steel, iron and other metal pipes, tubes, tinplates, tacks, nails, bolts, wire, etc. Incorporators, G. V. Cousins, P. F. Brown and S. T. Mains, Montreal.

The Standard Oil Co. of Canada has obtained an Ontario license authorizing them to purchase lands and search for oil, and to carry on business as refiners and dealers of oil, etc. They have appointed Wm. R. Wadsworth of Toronto, their attorney. The company is incorporated under the laws of Great Britain.

Joliette Steel and Iron Foundry, Ltd., Joliette, Que., capital, $250,000; to manufacture steel, iron, brass and aluminum products. Incorporators, S. Vessot, A. Durand and E. Hebert, all of Joliette.

The British Empire Bridge Co., Montreal; capital, $5,000,000; to manufacture all kinds of steel and iron work. Incorporators, R. C. Smith, F. H. Markey and W. W. Skinner, Montreal.

INDUSTRIAL NOTES.

Port Arthur authorities are trying to induce Wm. Mackenzie, of the Canadian Northern Railway, to establish a foundry there, to use the pig iron from the Atikokan Iron Co.'s plant.

John Coughlan & Sons, Vancouver, have a $125,000 contract to supply the structural iron to be used in the new "World" building there. This steel frame, it is said, will be the largest erected in Canada.

The Dominion Iron & Steel Corporation have sent out specifications and are calling for tenders for construction of seven large buildings to be erected at their plant. These include: boiler house, machine shops, foundry, warehouse, oil house, carpenter shop, repair shop and finishing mill.

Sir Robert Perks, the leading spirit in the Dominion Dry Dock Co., has deposited plans with the Department of Public Works for a first-class dry dock at Levis, to cost $4,000,000.

Law & von Dohlen, financial agents, Vancouver, will organize a corporation with its head office in that city, for the purpose of manufacturing and marketing in Canada the Gray Instantaneous Automatic Electric Water Heater, of which electrical utility they are the sole owners of patents in the Dominion.

The Frictionless Metal Co., Chattanooga, Tenn., employs only women as managers of all their branch offices in the United States and Canada.

What the Trial Balance is For

In Many Businesses Balances are Taken Off Monthly—Hints for Locating Errors—Importance of the Cash Account—Use of the Check Figure—Different Books Popular for Practical Purposes.

By Howard R. Wellington.

It is a fact that seldom, even with the most expert bookkeeper, will a trial balance result with equal debit and credit on the first trial. An error in addition, an omission, a transposition, or a hundred and one other possible differences will prevent a bookkeeper from "striking" a balance first time.

Date for Trial Balance.

It is possible in some businesses to arrange the office work so that the bookkeeper is free to take off a trial balance on the first, or not latter than the second of the month. If such a course is practicable, a rule should be made to have the balance off on that date. In such a case the bookkeeper is in an excellent position to make up estimated statements of the firm's standing in regard to purchases, sales and expenses and comparative statements for the purpose of comparing with last year's records. Then, again, the posting may be resumed immediately, so that any entry for the current month may be readily referred to in the ledger, which is the final resting place for all amounts on the books.

Hints for Locating Errors.

One of the first steps to take is to look through the sheets carefully to ascertain if any balance of account has been omitted or entered on the wrong side of the trial balance.

As a rule, the difference is made up of two or more amounts so that it is not always advisable to check back looking for the exact amount.

Differences such as, $42.00 posted as $24.00, $64.00 posted as $46.00, are amongst the most common errors, and when the difference in the trial balance is $18.00, an error of this nature may be looked for.

An account ruled off, which is not in actual balance is one of the most difficult errors to locate, or to contrast with this, an account not ruled off, and an old balance added in the present month's trial balance.

The Cash Account.

Very few bookkeepers carry "A Cash Account," in the ledger, relying on their memory to enter the cash balance in the trial balance sheet. Frequently the cash balance is omitted, and a great deal of unnecessary work could be avoided by posting debit and credit totals of the cash book in the ledger.

Ascertain that all items have been posted for the month, and besides this, the totals of sales, bills receivable, columnar totals in cash book and all impersonal accounts.

The Cheque Figure.

The use of the check figure with all postings, while not infallible, will prevent most errors if thoroughly carried out. It will also prove an excellent check on all posting, forcing the bookkeeper to use the utmost care in posting.

The trial balance is a proof of the correctness of the work for the period. By grouping and arranging accounts, a comparative statement may be prepared each month without extra work, showing accounts receivable, accounts payable, bills receivable and payable, purchases, sales, etc., so that a close watch may be kept on every detail of the business.

Comparing the three ledgers in use today, the card ledger, loose leaf and bound book, the loose leaf is undoubtedly the most popular.

A large number of firms are still using the bound ledgers, and would not change for any new system, but this style now appears very cumbersome as compared with either of the other two systems. It is impossible to gauge the necessary space for each account, or divide the ledger so that all accounts of a similar nature appear in one section of the book.

When an account is filled, it is necessary to open a new page, probably in some other part of the account.

It is absolutely necessary to have an index, and this takes considerable more time for the posting.

As compared with the former, the loose leaf ledger has a great many advantages, in that any number of filled sheets may be taken out and filed in a transfer, while new sheets are inserted, bearing the same number with which the bookkeeper has become familiar.

New account sheets may be added from time to time and inserted in the proper spaces without altering the ledger in any way.

The accounts may be re-arranged in any way and grouped for statement purposes.

The posting may be accomplished quickly, and by posting up the statements during the month, as a great many concerns now do, the bookkeeper is enabled to work on the trial balance directly after the first of the month.

The Card Ledger.

This form of ledger is not very popular, unless for doctors' or dentists' accounts, etc.

The operation of first selecting the card desired, taking it from the drawer, posting the entry, and replacing in the proper order, takes considerable more time than would a similar process with the loose leaf system.

Then, again, for checking purposes, it would take considerably longer, as the operation of removing the card takes longer.

The card ledger may be suitable for accounts which are not very active, but does not compare at all favorably with the loose leaf.

CUSTOMS AGENT FOR BRITAIN.

H. S. Scott, until lately the representative of the Canadian Customs Department in New York, has been sent to London in the capacity of the same Department's chief agent for Great Britain and the Continent of Europe. On account of the increasing volume of exports from the United Kingdom to Canada, and because of the large Continental element in much of the merchandise coming from the United Kingdom to Canada, it has been deemed necessary to have a special agent of the Canadian Customs Department in London. The question often arises whether a given shipment from the United Kingdom is entitled to admission into Canada at the preferential duty rates. The product that is finished in Britain may have received all but the final touches in Germany, Austria, Belgium or some other country not entitled to the benefit of Canada's preferential tariff. The rule made by the Minister of Customs is that 25 per cent. of an article's value must have been added by fabrication in the United Kingdom or other British possessions entitled to the preference to make it eligible for admission at the preferential rate.

It is asserted that there has been some sharp practice on the part of Continental manufacturers and their British agents in order to get their goods the advantage of admission into Canada as British goods. The new agent is expected to check this form of customs fraud and also to facilitate the entry of genuinely British goods at preferential rates. His duties have also in some measure been made for him by recent commercial treaties between Canada and some other nations, notably France, Germany, Italy, Belgium and Holland. These countries are to get the benefit of the treaty rates not only in goods shipped directly from their own ports to Canadian ports, but also on goods they send by way of the United Kingdom. To watch this class of commerce will be part of the new agent's business.

WHOLESALE HARDWARE CONVENTION.

The twelfth annual convention of the Canadian Wholesale Hardware Association has been called to meet at Montreal on Wednesday, Oct. 26., on which evening a banquet will be held, a limited number of invitations for which are now being issued.

The American Hardware Manufacturers' Association and the National Hardware Association meet at Atlantic City on October 19, 20 and 21, and the Canadian wholesale hardware delegation is expected to consist of President Wm. Starke, Montreal, Vice-President S. H. Alexander, Hamilton; Past President T. G. Dexter, Toronto, and Secretary-Treasurer, James Hardy, Toronto.

M. J. Hallorn has withdrawn from his partnership in the Bowman Gas Range Co., Toronto, Mr. Bowman continuing as sole owner.

News and Methods of Canadian Hardwaremen

Timely Advertising by Widea wake Retailers—Smith's Falls Growing—Method in Stock-Keeping—Belting Trade Cut Up in Western Canada.

TIMELY ADVERTISING.

St. John, Oct. 5.—The shooting season which opened in New Brunswick and Nova Scotia on September 15, has given an impetus to the sales of ammunition and guns and practically all the dealers report business very good in these lines Wideawake merchants have increased sheir sales materially by timely window displays of game and hunting goods.

The advertising copy of some of the local dealers lately has been very timely and it brought gratifying results. One of the merchants featured for two or three days the fact that linseed oil was very high and scarce and that it would probably go higher, and in consequence the sales of this commodity increased very considerably. A scheme that has been found to produce good results has been the adoption of a line of advertising calling attention to the fact that this firm make a specialty of hardware for builders and they would like to assist merchants by figuring for them on the hardware specifications of buildings going up in their neighborhood.

FIFTY-SEVEN NEW HOUSES.

Smith's Falls, Oct. 5.—The Canadian Cooperage Mfg. Co., employing 50 hands, is expected to locate here. A committee of the Board of Trade and Council is in communication with them.

The hardware trade has been very brisk here this summer. A large number of cottages were erected on the Rideau Lake, lumber and hardware supplies being obtained here.

The corner stone of the new $30,000 hospital was laid by Senator Frost, President of the Frost & Wood Co., on Friday last.

The time for receiving tenders for the new $46,500 Collegiate Institute has been extended to October 15.

The amount spent in new buildings in 1910 is $280,850. This includes the hospital, Collegiate Institute, C. P. R. improvements and the 57 new brick houses, these being chiefly of brick or concrete block construction. This construction has had a stimulating effect on the hardware situation. The population of Smith's Falls is now nearly 7,000.

SPECIAL SALE OF GRANITEWARE.

Palmerston, Oct. 5.—A very successful 15 and 25 cent sale of graniteware is being conducted by Chalmers Bros., Palmerston, this week, a fifteen inch double column announcement having been run in the local papers last week. The ad. is headed: "Graniteware Specials," and is introduced by the following paragraph:

"We have made a large purchase of Graniteware Seconds at less than cost of manufacture. Seconds in name only is what you'll say when you see the goods. The biggest and best lot we've ever effered—a splendid opportunity for housekeepers to stock up for the fall and winter. This is positively our last special sale of graniteware this season."

METHOD IN STOCK KEEPING.

Lindsay, Sept. 28.—Any method whereby a merchant can keep reliable record of his stock and watch slow sellers, is worth money. One merchant has had satisfactory results from a stock book marked with selling prices and numbers which are duplicated on stock. As goods are sold, stock numbers are marked on checks which are entered in stock book under the various numbers. This shows what stock is moving and if any line of goods is sticking.

A method used by O'Laughlin & McIntyre, Lindsay, enables them to know at any time from whom a particular piece of goods was bought and the date. When goods come in, tickets are marked with the firm's own number and this appears in the invoice book together with stock number of the goods. A letter is placed before each number. For example, if the number is S1000 on the ticket, by looking up this number in the invoice book, together with stock number, it is found that the goods come from a certain house, with the date of purchase. The letters of the alphabet are used consecutively and each season the letter is changed.

Every night checks are entered, and cash is balanced. Their sales book is ruled into sections with clerk's number at the head of each. These sections are sub-divided into columns for checks, paid and unpaid sales.

OWEN SOUND IS GROWING.

Owen Sound, Sept. 27.—There is a tremendous amount of building under way here at present. The Corbet Foundry and Machine Co. is erecting a new building, for their increasing business, in steel bridges, fire escapes, smoke stacks, roller bearing trucks and marine and industrial repairs. A little further north, William Kennedy & Sons, manufacturers of iron and steel castings, propeller wheels, iron and steel gears, turbine water wheels, etc., are extending their shops from street to street, while still further north, the North American Furniture Co.'s new factory is being started on this week.

Added to this long list is the new Westside Methodist Church, Marine Hospital and at least twenty-five high-class residences in different parts of the town. This looks very good for the hardware trade in general.

BELTING TRADE CUT UP

Belting, a line which is featured in one Hardwarde Co., two of whose ads. are forwarded herewith, make it a point to change their ads. each week and make the announcements seasonable, as will be seen by the Threshers' supplies and harvest articles featured in the announcement shown.

Moose Jaw, Sept. 30—The Buchanan of the ads., is badly cut up in this western country, some of the manufacturers refusing to protect the trade, and allowing their goods to be sold at cut prices by implement agents. If there was a strong Retail Hardware Association in existence the manufacturers would soon hear from the retailers on this question.

Seasonable Western Ads.

INDEXING CUSTOMERS' WANTS.

A Rhode Island department store uses yellow want slips in connection with every clerk's sales book. It is an absolute rule that every request by a customer for goods not in stock be reported. The slips come to the department buyer daily for classification and serve as a barometer of the demand as stimulated by advertising campaigns.—System.

STEPHENS SHINGLE STAINS

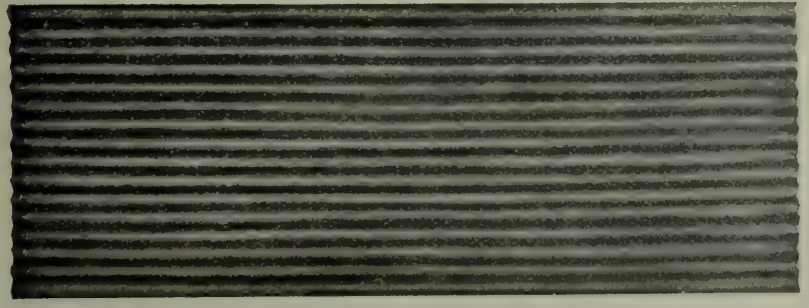
Picturesque Preserver of Property.

None other gives such Perfect Satisfaction.

Manufactured by

G. F. Stephens & Co., Limited

Winnipeg, Canada



Paint and Varnish Makers

BRANCH AT CALGARY, ALTA.

The Wise Western Dealer

avoids delay and inconvenience by buying from Western manufacturers.

Corrugated iron, painted and galvanized.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Oct. 6.—Very few of the following staple lines are in demand at the present time. A very good season has been completed in building material, and builders' hardware. As the season closes, there were only a few finishing materials being called for, such as hinges, hooks, and lock-sets. Merchants are well stocked and they are retailing satisfactorily in a wide range of specialty goods at the present time. This week the demand for horse-shoes, horseshoe nails, blankets, lanterns, stove-pipes, solder, sheet metal, is very heavy, and the prices as indicated last week are held firm.

Hot air heating, as well as steam heating goods are going out very satisfactorily. Galvanized sheets have been in demand for some time, and it would seem that many hardware men have taken on considerable contracts for hot air heating. Heating stoves, as well as kitchen ranges and cookers are moving well in the retailers' hands. Heavy stocks have been installed some time ago. The stove trade for the balance of the fall promises to be excellent, due to the increased population of the country, and the increased number of retail hardware stores that are opening up in every corner of the west.

With the prevailing excellent weather, good railway transportation, and satisfacfactory collections, the trade was never better than it is at the present time.

Winnipeg Hardware Quotations.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75.

Auger Bits—"Irwin" bits, 47½; other lines, 75 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—Planished copper, 30c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, $4; pressed standing seamed roofing, 28, painted, $3.20; galvanized, $4; 26, $3.55 and $4.35.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 10; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.80; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2, and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3,30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50. Galvanized, ¼-in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼-in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $4.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper, No. 8, 39c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c. Coppered, No. 8, 18c.

Rope—Sisal, 9½; pure manila, 11; British manila, 9¾; lath yarn, 9¼c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—22c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $8.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.75.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box. $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2.90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.25.

Paints and Oils.

There is no change in the paint market and last week's advances are strongly maintained. Every item in the following list is moving well and it is evident that merchants were too lax in their ordering at the proper time. Merchants are advancing their paint prices on the prospect of a continued advance in the oil market. A few, however, continue to sell at a loss with a view to increase the turnover and destroy legitimate competition. This means that such merchants will have to take a sensible view of things very soon and close their doors. Prices are going up due solely to natural causes and everyone must sooner or later fall in line.

Putty and Glass.—Putty is firm at last week's advanced prices. The demand will continue heavy far into the winter months. Glass is moving well and a good demand will continue. Putty in bbls., $2.90; cases, $3.15; kegs, $3.40.

Linseed Oil.—Jobbers do not expect a reduction within a year and advances would not be surprising. Seed prices are steady, but unchanged. Boiled oil is $1.18 and raw, $1.15 today.

Turpentine.—Turpentine is firm and the demand heavy. The expected advance did not take place but a reduction is scarcely possible. The market to-day is $1.05.

Varnishes.—An excellent demand continues for varnishes and all furnishing supplies. The demand will continue well into the winter, as there are many buildings to complete and much renovating to be done.

White Lead.—Lead is moving in a steady characteristic manner. The price continues at $5.75 to $6.25, according to the brand.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 24c; Searchlight, 22c; Red Rose, 25½c; Keystone Special, 20c; Pemoline, in bulk, 19c; Silverlight, in bulk, 16c; Acme lamp, in bulk, 28c; White Rose, in bulk, 22c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

H. B. McDonald has purchased the hardware business recently conducted by George Storthart, Chathma, N.B., the latter retiring because of ill-health.

Do You Know The Little Paint Man?

THIS is a reproduction made from the original drawing of the Little Paint Man. The drawing wasn't made so many years ago, either. But it's surprising how familiar a character he has become in the Dominion. This is due to three reasons:

FIRST—He represents the long and well established line of

SHERWIN-WILLIAMS PAINTS AND VARNISHES

SECOND—After a dealer is stocked with the S-W line the Little Paint Man makes it his business to help move that stock at a profit. This always makes a big hit with the dealer, for it is good merchandising.

THIRD—He calls a spade a spade. That means that he never misrepresents his goods.

Tie up to the Little Paint Man and he'll tie your store to the best and largest trade in your locality. Write him today about it.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Standard Carriage Varnishes. — The International Varnish Co., Toronto and Winnipeg, have just published a new descriptive price list of their standard carriage varnishes. It is a small 16-page catalogue, but it contains in concise terms much descriptive matter of the various varnish lines made by the company—finishing, white carriage, rubbing and miscellaneous varnishes.

Yale Door Checks.—The Yale & Towne Manufacturing Co., New York and Stamford, Conn., have supplied Hardware and Metal with a copy of a 40-page publication just off the press, which illustrates and describes their extensive line of door closing devices. In addition to the well known Blount Check, made in six sizes, and adapted to all sizes of doors and conditions of use, the company has more recently put on the market three additional checks. The Blount-Holder Check, is similar to the original Blount Check, but has the added feature that it not only shuts doors gently, but also holds them open as well. The Yale Double-Acting Check is more ingenious. As the name implies, it closes double-acting doors; brings them to their normal position without a single flip-flap, and prevents the noisy, draughty, dangerous oscillations usual to doors with double-acting hinges. The fourth device, their Yale Checking Floor Hinge, performs all the functions of the regular Blount Door Check. It is a combined spring and check in one, and is placed in the floor under the door. Their catalogue states that it is specially intended for use on butlers' pantry doors. In the announcement of their catalogue they say a Door Check has been defined as "A device intended to curb the pernicious activity of a door spring by compelling it to behave decently." The fault of a door spring prompted the invention of a door check. The book is carefully printed on coated paper with many illustrations and some excellent advertising suggestions for promoting the sale of checks.

Metal Bars for Windows.—The Hobbs Manufacturing Co., London, has secured the sole Canadian Agency for Thorne Hold-Fast Metal Bar, and can now supply same from any of their warehouses at London, Toronto, Montreal and Winnipeg. A modern store front is a matter of vital interest to every up-to-date merchant in order to show his goods to the best possible advantage. The Thorne Hold-Fast Metal Bar provides a method of holding the glass firmly together so as to withstand wind pressure, and still cover the smallest possible surface of the glass, thus giving the store a finished appearance. Every hardwareman should have a copy of the Special Thorne Catalogue covering store front construction in order to talk intelligently on this matter to prospective customers.

BAIT PLATE FOR ANIMAL TRAP.

The Oneida Community, Oneida, and Niagara Falls, manufacturers of animal traps, branded variously Newhouse, Hawley & Norton, Victor and Oneida, the names designating the different grades, of which the Newhouse is the highest, has adopted the plate here shown, to be used solely on the Victor game traps. The arrow which appears in the cut is intended to emphasize the V feature and does not, of course, show on the plate. The Victor traps are popularly priced and made in the same patterns throughout as the two longer known brands and in Nos. 0, 1, 1½, 2, 3 and 4 sizes.

This action has been determined on by the company to fix definitely in the minds of merchants and trappers the identity of this grade of trap, and that traps so branded are the sole product of the Oneida Community, which was the first producer of traps of this character. While it has been the company's experience that professional and expert trappers prefer the Newhouse or Hawley & Norton brands, there is a demand from

farmers and trappers of small game, here and abroad, for a somewhat less expensive but thoroughly reliable trap, the Victor Quality having been created to satisfy this demand.

FURNACE FOR INCINERATING REFUSE.

One of the most perplexing problems of sanitation is the disposal of refuse of all kinds, in places where sewerage is not available. Numerous systems, such as filtration, chemical dissolution, cesspools, etc., have been tried out extensively with but problematical results, and the undisputed fact remains that fire is the only reliable agent for the complete and

Furnace For Incinerating Refuse.

sanitary destruction of all waste matter. The accompanying engraving illustrates a device that has been adopted by the United States government for use in army camps. The illustration shows the device partly broken away, so that the interior construction may be understood. The device consists in reality of a furnace, in which is placed a large cast iron container, adapted to receive the waste which is here cremated. By this system no odors are allowed to escape during the process of incineration. The arrows show the course of the draft through the incinerator. The furnace consists of a sheet steel shell, with an outside jacket, and the necessary draft is admitted through the space between the jacket and the shell. The gases from the container are drawn by the draft down through a pipe at one side of the incinerator, and fed to the bottom of the grate; thence they pass through the fire, aiding in maintaining combustion, while any noxious products that may be present are consumed. After passing through the fire the gases thus purified are taken into the stack and out to the atmosphere. The furnace is thus disinfected automatically, and it always remains fresh and clean for the next incineration of refuse.

CANADIAN IRON ORE FOR SCOTLAND.

The first shipment of iron ore from Port Wade, Nova Scotia, consisting of about 5,600 tons, arrived at Ardrossan, Scotland, about two weeks ago. This is a trial shipment, and the result will be watched with great interest, as there is a very large market for iron ore in that country. Considerable quantities are imported from the mines of the Nova Scotia Steel & Coal Co., at Newfoundland, but the cargo referred to is the first Canadian iron ore shipped to the Scotch market.

How One Club Handles Fake Advertising Schemes

Commercial Club of Lincoln, Neb., Deals With Everything for the Merchants—Puts the Ban on Such Things as Cook Books—Merchants Thus Have More Money for Newspaper and Other Legitimate Advertising.

By Darlow Adnews.

The Commercial Club, of Lincoln, Neb., has succeeded to a remarkable degree in protecting the advertisers of that city against all sorts of advertising schemes. That word "schemes" is used in this connection to cover the various souvenirs, programs, etc., that formerly were so abundant everywhere, but that are now constantly decreasing in number to the decided advantage of legitimate advertising interest.

We cite the case of Lincoln because Secretary Whitten, of the commercial Club in that city, has with the assistance and co-operation of the local business men, succeeded in building up a most satisfactory plan for regulalating these special prospositions, and has done it without injuring a single permanent interest or causing loss to any deserving local industry.

Must Go to Headquarters.

The system works in this way: Suppose the solicitor for a cook-book advertising scheme goes to Lincoln for the purpose of selling the book to ladies and disposing of advertising space to retail merchants. The first man upon whom he calls, says: "What does the Commercial Club say about your proposition?"

"I haven't seen the Commercial Club," replies the solicitor.

"Then I can't do business with you, for we have an agreement in this city that prevents any of us from patronizing an advertising proposition that does not come under a certain recognized class or that has not the endorsement of the club."

After he has had this from two or three other merchants or advertising managers, the solicitor naturally goes to the club-rooms for the purpose of finding out where he stands.

There he accosts Secretary Whitten, explains hs proposition, and asks for information. He gets it.

"We protect our legitimate advertising institutions," says Mr. Whitten. "We regard newspaper, billboard and street-car advertising as legitimate, because they bring returns. There are certain other publicity media that receive our endorsement, because we believe they produce results that are more or less substantial But we bar your cook-book.

"Your book is printed in another state. That means that Lincoln gets nothing out of it. You expect to sell it here; and you expect to obtain money from our merchants for advertising, and all of that, also, you will send away. Furthermore, we do not consider it good advertising, and we cannot endorse it."

Sure to Lose Money.

If the solicitor continues his work, and tries to sell his space in spite of the Commercial Club and the business men's agreement, he finds the returns far out of proportion to the time and labor expended and soon gives it up as an unprofitable job.

The Lincoln Commercial Club believes that theatre programs are good, because they have a large and dependable circulation. It recognizes one publication for each university and college in the city, but insists that the total charge for advertising space shall not exceed the cost of publication In other words, the students are not expected to conduct their publications for profit. The merchants support them up to the amount of their cost, and not beyond that.

Some of the advertising schemes that are considered "doubtful" by the Lincoln club and, therefore, are barred, are city directories, unless published in Lincoln; hotel registers, desk cards, card cases, room cards, and similar devices; all newspaper schemes, other than those regularly presented by local papers; cook-books, society and church programs, blank books, time cards, etc.; theatre tickets, restaurant tickets and score cards; dance and all entertainment tickets; irregular publications issued chiefly for advertising purposes.

Advertising Encouraged.

Of course this list does not include any recognized publication and does not interfere with the work of solicitors for outside newspapers and magazines. General advertising is encouraged. The club merely aims to limit and control the special schemes that for years have claimed so large a share of each appropration.

The advertiser can now administer a graceful "turn down," and under protection of his agreement can do so without offending the solicitor or injuring his business. If the club's secretary is in doubt as to the worthiness of a proposition, he passes it on to a committee of three, who are unknown save to the president and secretary of the club. This committee has the final "say," and the solicitor who is denied cannot know just where to place his wrath.

Mr. Whitten says the merchants of Lincoln stand by the agreement very faithfully. They like the plan. Under it they have saved a great deal of money, and they have more money for legitimate advertising.

ACCEPTS NEW POSITION.

Fred E. Ellis, who represented the Gurney Foundry Co., for four years and the Gurney-Tilden Co. for nearly two years in Western Ontario, has resigned from the latter company to accept a position with Albert Welch & Son, Toronto, in whose hardware and stove store he learned his first lessons about hot air and hot water heating.

Fred. E. Ellis, Toronto.

In his new position Mr. Ellis will have charge of the outside work, supervising the installation of heating plants and calling on the trade in the city on behalf of the jobbing department of the firm's business.

During the five years spent on the road in Western Ontario Mr. Ellis has made some warm friends, who will be glad to learn of his acceptance of and success in the new position.

AMEND SILVER MARKING ACT.

Manufacturers of silver plated ware are endeavoring to secure the adoption of several amendments made to the gold and silver marking Act. They claim that gold and silver goods are being brought into Canada from the United States and other countries wrongly marked, sometimes marked as a better quality than they really are, therefore selling cheaper, and hurting the local trade. They ask that it be made a criminal offence for goods being shipped into the Dominion unless they are stamped at their true value. This point is covered by the existing law, but not clearly enough.

HAVE CONFIDENCE IN YOURSELF.

You may succeed when others don't believe in you, but never when you don't believe in yourself. He who is in a constant state of doubt and experiment needs a long distance telephone in order to get even within speaking distance of success.

It isn't only what a merchant says that establishes his worth in the community, but what he does. Actions speak louder than words, especially if his deeds are at all questionable.—Shoe Trade Journal.

No. 29

DO IT OFTEN.

Are you keeping up a thorough canvass of your district, Mr. Dealer? Have you made any personal calls, maintained a series of follow-up letters, circulars, or whatever it may be? Do not be deluded by the idea that one effort in either of these directions is sufficient. The paint consumer often takes a lot of wooing. Probably he may not understand the true merits of paint, and therefore is inclined to think that painting is more of a luxury than a necessity—something to buy when money is easy and nothing more important is wanted just then. Or he may be one of the kind who put off from time to time the job that should be done, or who are in blissful ignorance that fresh paint is needed on some structure or other. All these people are best influenced by one of the methods above instanced, and, as we said, naturally take a lot of soliciting.

One window display, one effort at canvassing, is not enough. The dealer must drum the gospel of paint into the minds of these people. He must, by repeated knocks, make the question of paint recur frequently in their minds. He must give them no chance of forgetting the matter, Paint, paint, paint, must be the cry of the dealer, until not only all the community know that he carries the right kind of paint, but are also as well educated as the merchant himself in the value of paint, and the saving that painting involves.

The canvass of a dealer should be largely of an eductational character. That is to say, while advertising the fact that his store is the "only" house for paint, he should also show why paint is so valuable, and the reasons why it should not be neglected or put off for a future time.

Make the advertisement, circular, letter, or personal call interesting. Do not use up all the space and time in comparisons with rival brands and various reasons why paint should be bought from this particular store. Rather get the probable users of paint interested in the painting question itself. Show how paint increases the selling value of a house or barn; how paint insures property against deterioration; how fine a disinfectant it is, routing out microbes and so on; and how it brightens up a dull place, making everybody around feel cheerful and of more value to themselves and to their friends. Once gain the interest of a person, once convince him or her of the value of a thing, and naturally the odds are that if there is any business following it will go to the

You can make more money and gain more reputation selling

ML PURE PAINTS

Because they are advertised, so your store gets the good of the advertising.

Because they cover better with two coats than the best of the other paints do with three.

Because they justify every claim you make for them when you talk to your most particular customer.

Carpet Tacks

Now is the time to sort up your stock of Tacks. We make all kinds.

M.R.M. Tacks are made from high-grade material. Heads are well made and uniform. Points sharp and clean cut.

THE MONTREAL ROLLING MILLS CO.
MONTREAL

one who did the convincing. So that a merchant in securing a convert to paint in all probability gets a customer. Therefore a dealer can well afford to give plenty of attention to the educational part and let the purely advertising of his store take a less prominent position.

It is only by repeated efforts that a dealer can hope to secure the best results. Like a number of well designed window displays, it is the accumulative force of the whole series that does the work, and so in educating a district to the value of paint.

By instituting a regular campaign of canvassing the dealer not only, as we said, gets the best results, but in the end he saves himself a lot of trouble. A system once in working order becomes more and more easy to maintain as time goes on. Experience teaches improvements here and there; a saving of time and money, more convincing talking points and so on. The canvassing becomes a regular part of the store routine, and the merchant does not notice the additional trouble. But if the campaign is a spasmodic one; if calls are made or letters sent out at irregular intervals, or say only once during each season, then not only does the merchant lose ground between each prolonged attempt, but he makes the same mistake over again, and each campaign is as crude as the one previous. If the thing is worth doing at all, do it well, and do it often.

PAINT AND OIL MARKETS

MONTREAL.

Oct. 7—Despite the higher figures in the paint and oil markets a fair trade is reported. No one is inclined to dispute the fact that business has been checked by the advances, but still all the same sorting up orders are coming in steadily, and apparently consumers are not worrying much about having to pay more. If a man decides to paint a house the fact that it will cost more now than it would have say in the Spring, will not make him put off the job.

Although prices are very firm, no further advance is reported. A little sagging was noted in the English linseed oil market, but as stocks are so light over here the local market did not respond. Turpentine continues to have a bullish tendency, and conditions in the South point to even higher prices in the future. Despite the advance in white lead some heavy lots have been despatched. The boats have been carrying some good round lots, and the prospect is that from now on the demand will be heavy. Red lead and other lead products and varnishes all show good activity.

Turpentine—With conditions in the South still very bullish, it is thought that turpentine will go to much higher figures, but all the same buyers are not inclined to speculate on this, and orders are somewhat on the cautious side. Still there is a good hand-to-mouth trade showing. We continue to quote $1 to $1.02.

Linseed Oil—For the time being linseed oil has ceased to show any more sky-rocket proclivities, and the market has been on the steady side, although very firm. Cables from the Old Country showed a somewhat sagging tendency in the London market, especially for forward delivery, but the local market was unaffected. Stocks are short, and supplies are held in very strong control. Although in some quarters higher prices have been obtained, general quotations are about $1.08 for raw and $1.11 for boiled.

White Lead—Despite the higher prices an active trade is reported in white lead, especially by those shipping by the boats. With the possibility of another advance some dealers are looking ahead with the intention of being on the right side. Grinders are anticipating a very heavy fall trade. We continue to quote $6 to $6.50, according to brand.

Varnishes and Japans—An encouraging trade is reported in varnishes and japans. The good industrial conditions mean that the large users of implement, coach, piano, and other varnishes are buying freely. There is also a good call for household lines, as interiors are now being made ready for the winter. There is a good tone all the way round.

Putty—In view of the close of navigation, dealers are taking heavier lots, and makers report much more activity than before. The advance in price, therefore, does not seem to affect the trade very much. We continue to quote: 100-lb. drums, $2.60; bladders, in barrels, $2.85.

TORONTO.

October 6.—There have been no radical changes during the past week in the paint markets. The high prices of the various commodities remain firm and buyers are taking the situation philosophically.

Reports from local jobbers show that September's business has been very great, the closing fortnight especially showing splendid trading.

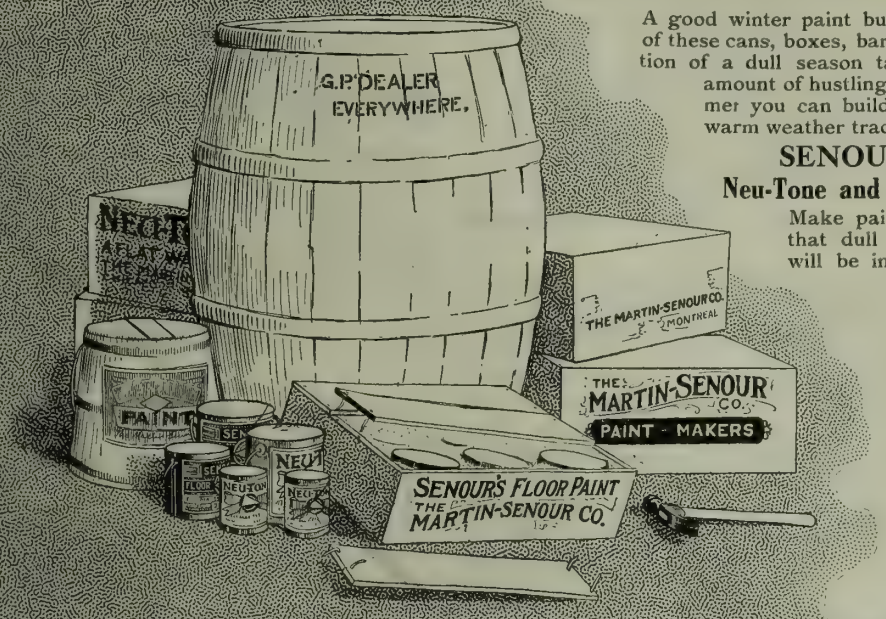
There has been no change of note in the linseed oil situation. The English price declined somewhat during last week, but on Monday it again came up to the high figure. The stocks are very light in Toronto with no change in price.

For spirits of turpentine there has been a slight fluctuation, but the stock at shipping points is now not half the quantity that was there a year ago and it is believed that the high price that has been in force the past two weeks, both for rosin and turpentine, has induced the producers to rush their stock forward as soon as manufactured and that the supply for the balance of the year is to be very light.

Constant Turnovers Greatly Help Your Paint Trade

It does not help you to carry paints that can be sold only once to a customer. In order to give your stock exercise, keep it moving. To do more business and make larger profits on a given capital, book your order for

B-H. "English" Paints



These paints are the only ones in Canada made with BRANDRAM'S B. B. GENUINE WHITE LEAD. The base used is 70 per cent. of this famous lead, and 30 per cent. Pure Zinc White. The other ingredients are also of the very best. B.-H. "ENGLISH" PAINTS can be sold again to the same man, and he will send his friends to you.

Send for full information on our complete line, and facts of interest to paint dealers.

A STRONG PULL

A good winter paint business will be found in the contents of these cans, boxes, barrels and kits. Do not let that tradition of a dull season take hold of you. With the same amount of hustling that you do in the spring and summer you can build up a business as *profitable* as your warm weather trade with

SENOUR'S FLOOR PAINT

Neu-Tone and other Martin-Senour Finishes

Make paint profits the year round, cut out that dull season expense and your business will be in prime condition. A healthy, live business will out-distance all competitors just as a clean limbed, well trained racer can win the race against an old plodding farm horse. Thousands of Martin-Senour's dealers have done this—it is now your turn. Write to-day for **Martin-Senour Agency.**

Moore's House Colours

One of the famous MOORE LINE, made in Canada. These colours have for years held their own against a host of rivals because of the purity of their ingredients, and the care and skill used in their manufacture. The retailer gets a first-class paint at a reasonable price, because we don't spend immense sums on magazine advertising. Our policy is to put all the money into the paint and to leave it to advertise itself. If you are not yet handling the MOORE LINE we would like to send you colour card and prices. A trial order will convince the most sceptical. Write us to-day.

Benjamin Moore & Co., Limited
WEST TORONTO
New York Cleveland Chicago

Varnish prices are still withheld. A number of makers contemplate changing the form of their lists and are waiting to evolve a new system before publishing this information.

Turpentine.—The local price is still fluctuating between $1.01 and $1.03 as at last issue. Trading at this high quotation is somewhat light.

Linseed Oil.—The condition of seed remains unchanged. Stocks are low and trading is not heavy. The quotation of last week still holds. Raw oil ranges from $1.07 to $1.09 for single barrels, and boiled oil from $1.10 to $1.12.

Rosin.—All grades continue to sell at tight prices. "G" is quoted at $3.25 per hundredweight in barrel lots.

White Lead.—Splendid sales of white lead continue, though booking is not so heavy as last week. Ton lots of "Government standard" white lead stands at $5.65 f.o.b. Toronto, with 25 cents a hundred more asked for less than ton lots. Private brands of genuine run at least a dollar above these prices. Some good second grades said to be better than "Government standard" are quoted around $5.90 to $6 in ton and less than ton lots.

Red Lead.—This line is unchanged in price or condition. Genuine in casks is at $5.75 per hundred, with No. 1 at $4.25.

Putty.—Trading is much better this week. The building situation calling for large quantities. Buyers were holding off to see if the high prices would stay. Bulk in barrels is at $2.20; in 100-lb. drums, $2.45; bladders in barrels, $2.70; in 100-lb. irons, $2.80; 25-lb. loose, $2.55; cased, $2.60; 12½ lbs., cased, $2.80. Special putty prices are 10 cents below these figures for like quantities, and pure putty 35 cents higher.

Glass.—Business is passing in good volume and sales are increasing as the season advances. The higher tendency of the paint market has made glass firmer, though it is not likely from present indications that any advanced figures will be asked.

Petroleum.—The strong feeling apparent a short time ago has given place to an easier tendency. Trading is not heavy in any one line, though all petroleum goods are selling fairly well and the volume taken as a whole shows good business passing. Canadian prime white is still at 13 cents a gallon, American Water White is 14½c, and Pratt's Astral, 17c. Benzine and gasoline are now quoted at 16½c and 18½c, respectively.

KILLING PINE KNOTS.

There are several plans for hiding pine knots and sap so that they will not show under the paint. The old stand-by is shellac varnish, made thin, but this will not always do the trick, at least not when wood alcohol is the solvent. For fine work silver or even gold leaf are not expensive, as a few cents' worth would do for many knots. Shellac will sometimes cause the paint to peel off, floors, and will not always keep the pitch from striking through. Some use and highly endorse red lead and glue knotting, others use red lead and gold size, with a drop of boiled oil added. The trouble with glue size is that one must keep it hot or it will not work.

PAINTING TIN ROOFS.

There is nothing better than metallic brown, Venetian red, or graphite paint for tin and iron roofs. But do not paint with graphite on first coat, but on the second coat if two coats are given. The first coat may be a good metallic or oxide of iron paint, mixed with raw linseed oil, no driers, and applied evenly and well brushed out. The first coat should be given two weeks to harden in before applying the second coat. This is in accord with the working specifications of the National Association of Master Sheet Metal Workers.

ALUMINUM PAINT PREVENTS RUST.

For machines which are to be used for business service in all weathers, it is a good plan to sacrifice appearance for utility and apply a thorough coating of aluminum paint to most of the plated and polished surfaces. If the spokes and hubs are treated in this way, they will be protected from rust and therefore will last much longer than if allowed to remain untouched. Before applying the paint, of course, it is essential that the parts be thoroughly cleaned and dried; the least particle of moisture or any specks of dirt which would interfere with the paint, would give opportunity for corrosive action to be set up.

ADULTERATED LINSEED OIL.

The Minnesota dairy and food commissioner has fifty barrels of linseed oil, or "near" linseed oil, which he confiscated during recent months when shipped into the state by the American Linseed Oil Company because adulterated. A decision in Federal court upheld the commissioner in confiscating the oil, and thereby it becomes state property. "It's good for street sprinkling or use in a soap factory," says Commissioner French. The linseed oil had been diluted with petroleum, in some instances as high as 47 per cent.

IMPORTANT NEW INDUSTRY.

Montreal, Oct. 5.—When it was announced this week that James Reid Wilson had decided to retire from the directorate of the Nova Scotia Steel and Coal Company, very little surprise was manifested as it had been known for some time past that it was his intention to form a company of his own for the manufacture of tubes, pipes, tacks, bolts, wire products and other articles consisting of iron or steel. The new company, which will be known as The Canadian Tube and Iron Company, will be capitalized at $1,000,000, and associated with Mr. Wilson in the new concern will be Messrs. Waldie and Hough, formerly of the Montreal Rolling Mills, before it was taken into the merger. The necessary capital being available it is expected that operations will be started very shortly, the plant being located at Montreal.

STAR HACK SAW BLADES

Apparently no one questions the superiority of Star Hack Saw Blades and at our present figures there is absolutely no room to question the price.

They are equally good in hand frames or power machines. When used in a machine the feed should be adjusted to suit the stock being cut. The softer the stock the lighter the feed. Such treatment will prevent clogging of the teeth. Open your eyes wide and look at this list of prices:

6	7	8	9	10	11	12	inch
30	32	34	38	42	46	52	cents per dozen.

Notwithstanding the great reduction in prices, the quality of Star Blades has been improved.

Tobin Simplex Guns

PERFECT SIMPLICITY OF CONSTRUCTION distinguishes all Tobin Simplex Guns. And with this feature there is a combined absolute accuracy in the fitting of parts. As a result Tobin Guns always give enduring satisfaction. The Tobin is the only shot gun made in Canada, but no gun made in the world equals the Tobin—grade for grade.

TOBIN ARMS MFG. CO.

"IMPERIAL" ANTI-FREEZING WINDMILL

FORCE PUMP

With improved vertical three-way, for tubular or other wells.

Six, eight and ten-inch stroke.

In Fig. 18 we have aimed to embody every good quality that is essential to a perfect pump. It is light in weight, symmetrical in design, mechanical in construction, and for beauty, strength and finish is without a peer. We are thus enabled to offer the trade a single-acting, underground three-way pump that covers the entire field, and enables the dealer to fill any order, and does away with the expense of carrying from three to five different styles of pumps in stock, different sized flanges are all that is necessary. Always fitted with 1¼ flanges unless other size is specified.

Amatite ROOFING

When a man is under the necessity of using a lot of roofing, he is pretty sure to study the subject with great care.

That is why Amatite is so often used on the big ready-roofing contracts.

A man who has only a few hundred feet of roof will often be careless in his choice of roofing, but when it comes to thousands of square feet Amatite is sure to be used.

The following is a typical instance:

Buy It—and You'll Never Need Roof Paint

Paterson Manufacturing Company.

Dear Sirs: We wish to inform you that the "Amatite" Roofing which we have used on our office, storehouse, lumber shed and barn has given most satisfactory service.

The area that these roofs cover is about 15,000 square feet. The roofing is unusually attractive in appearance, and in our judgment is the most durable and satisfactory made. The fact that it requires no painting appeals to us very strongly, and this feature makes it by far the cheapest ready roofing on the market.

CITY LUMBER & COAL COMPANY.
[Signed] F B. Boardman, Treasurer.

The economy of Amatite is not only in its durability and its price (lower than any other mineral surfaced ready roofing on the market), but also in the fact that *it requires no painting.*

You may be sure it would cost something to paint their big roofs if they used a roofing that needed painting. All that is saved with Amatite.

A sample of Amatite will be sent you for inspection free if you will send name to the nearest Paterson office at once.

The Paterson Manufacturing Company, Ltd., Montreal, Vancouver, Toronto, St. John, N.B., Winnipeg, Halifax, N.S.

Shears that Sell

This cut represents our Ordinary Straight Trimmers

Are those with an unconditional guarantee behind them—CLAUSS SHEARS. They are made to cut the finest or the heaviest cloth, work easily and quickly, and cut from heel to point. By our Natural Gas Process every Clauss blade has a perfectly tempered edge.

The Clauss line of cutlery is the most complete in the world. Stock up with a good range of Clauss goods. There's good profit in handling this line.

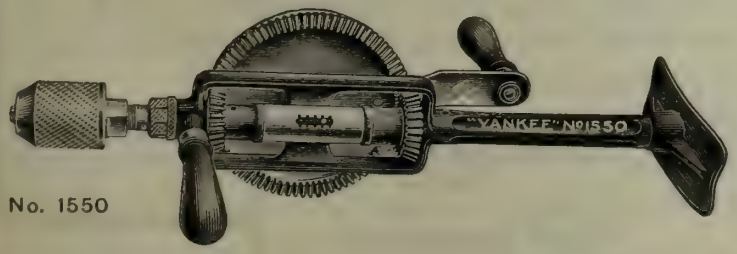
Show Him the Other "YANKEE" TOOLS

No. 115

No. 65



No. 35

No. 44

No. 50

No. 1550

It is better to sell one buyer all the "Yankee" Tools you can while he is interested than to hurry him off to sell another a cent's worth of nails. It's easier too.

Your nail customer will wait. Get his ear and he becomes interested and likely as not a "Yankee" Tool buyer. Show the other styles before you let him go. "Yankee" Tools appeal to men of every trade and profession from Carpenter to Clergyman, and a little demonstration is sure to make sales.

Think of the number of customers who have bought the No. 30. Everyone will be interested in the four attachments made for this tool. But this is only the first chapter of the "Yankee" Tool story. We make 35 styles and 75 sizes. Everyone a labor-saver. Get acquainted.

Let Us Send You Catalog.

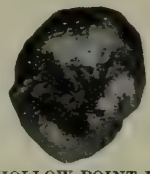
The Christy Safety Razor Co., Ltd., 147, Queen Victoria Street, LONDON, ENGLAND.



HOLLOW POINT BULLET

A NEW FEATURE IN METALLIC AMMUNITION

The hollow point increases the shocking and killing power of the bullet because of the greater mushrooming qualities over the solid lead bullet.

HOLLOW POINT BULLET (Before Firing)

HOLLOW POINT BULLET (After Firing)

SOLID BULLET (Before Firing)

SOLID BULLET (After Firing)

.44 CALIBRE

Note the cross section of the unfired hollow point bullet and its mushroomed appearance as compared with the solid bullet after being fired. Sportsmen can increase the efficiency of their rifles and revolvers in game shooting by using hollow point bullets at a trifling added cost over the old solid bullet.

UMC hollow point lead bullets come in the following sizes:

.22 Short, Hollow Point, Black and Smokeless.
.22 Long, Hollow Point, Black and Smokeless.
.22 Long Rifle, Hollow Point, Black and Smokeless.
.25 Stevens, Hollow Point, Black.
.25 Stevens Short, Hollow Point, Black
.32 Winchester, Hollow Point, Black and Smokeless.
.38 Winchester, Hollow Point, Black and Smokeless.
.44 Winchester, Hollow Point, Black and Smokeless.

INCREASE YOUR SALES BY BEING THE FIRST TO INTRODUCE THE HOLLOW POINT BULLETS IN YOUR CITY

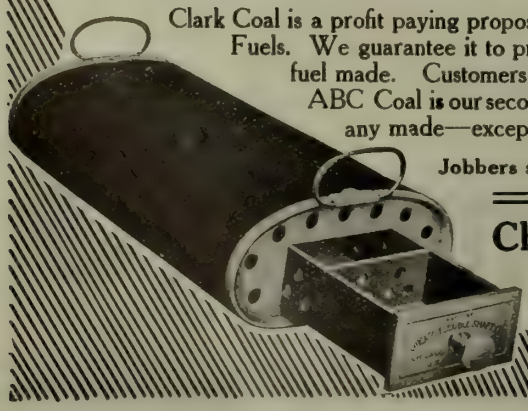
Products That Sell In The Winter



Get ready for winter, before winter gets ready for you. Right now is the time to prepare for the demand—before the demand arises. No use in waiting until you have to turn customers away. Get ready **NOW.**

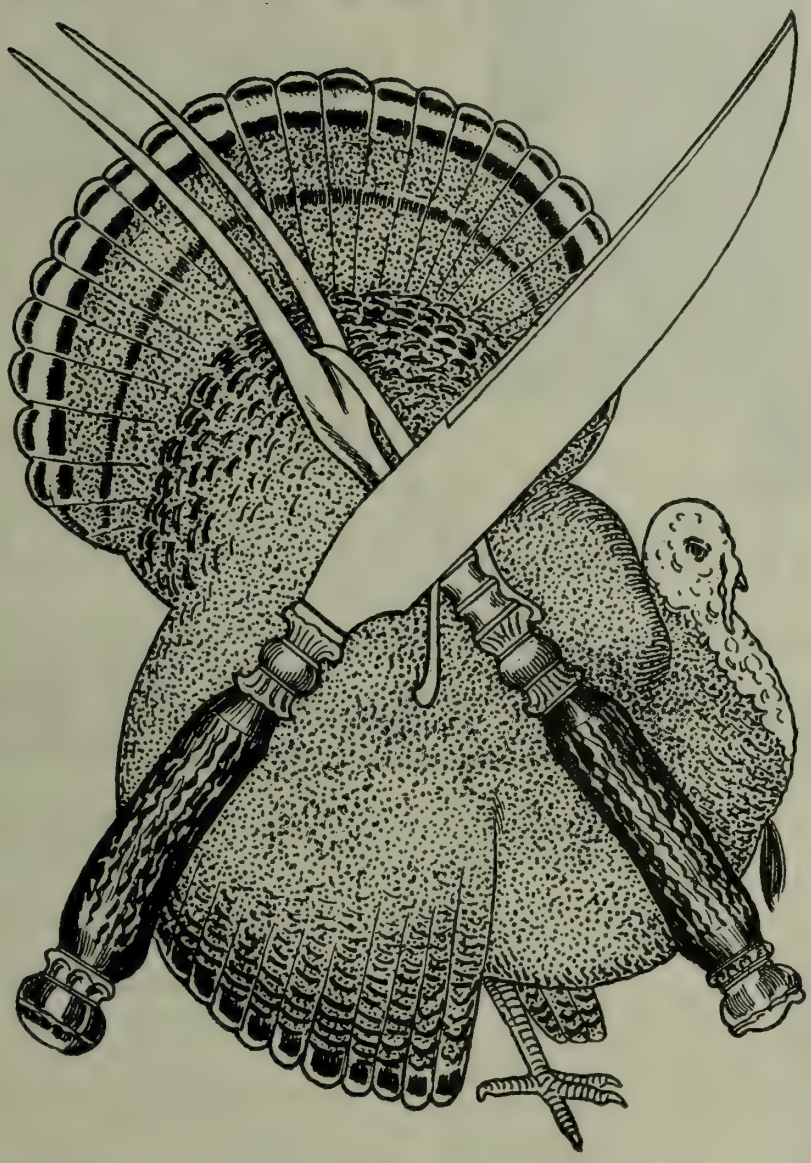
The demand for Clark Heaters is beginning. In every carriage, wagon, sleigh and automobile is a place for a Clark Heater.

The public will naturally ask for "Clark's," because they are made from best materials, have no soldered joints, no screws to get loose. Every joint is solidly riveted.

Liberal Advertising all the time makes Clark Products the Dealers' Line

Clark Heaters and Clark Coal

Clark Coal is a profit paying proposition. Unquestionably the King of Heater Fuels. We guarantee it to produce 25 per cent more heat than any other fuel made. Customers **buy** this coal—guarantee or no guarantee. ABC Coal is our second grade fuel. Guaranteed to be the equal of any made—excepting our Clark Coal. Prices are interesting.



Jobbers sell these—or write for 1908-1909 Catalog.

You should have a catalogue showing the hundreds of handsome designs of

"METALLIC"

Ceilings and Walls

It means Dollars and Cents to you

Tell your fellow-merchants of the money-saving, sanitary and durable features of "Metallic." It reduces the insurance, cuts out the ordinary plaster ceiling repair bills, and adds greatly to the appearance of a store. "Metallic" lends readily to any style of decoration desired, and, furthermore, lasts a lifetime. The first cost is all the cost there is to "Metallic" Ceilings and Walls.

If you haven't a Ceiling and Wall illustrated catalogue, write for one to-day. Send us the names of your prospects. We will assist you by mailing them full information and illustrated booklet—"Interior Decoration in Metal." Send measurements of store for complete estimate of cost.

Manufacturers of "Eastlake" Metallic Shingles—Metallic Sidings—Cornices—Lath—Skylights—Ventilators—Finials—Conductor Pipe—Eavetrough—Fireproof Windows and Doors, etc.

HEATING ENGINEERS, STOURBRIDGE, ENGLAND

5000 REVOLUTIONS PER MINUTE

ON HEAVY WOODWORKING MACHINES

It requires the very best kind of Antifriction metal to withstand such speed any length of time. "Genuine" Babbitt won't do it, and no other metal can touch Magnolia for such severe service, as well as its special adaptability for the heaviest pressures, such as Rolling Mills, Rock Crushers, etc.

Chicago, Ill., April 8th, 1910.

Gentlemen—Enclosed find 40 cents for which please send me one of your Engineer Pocket Books. I have used Magnolia for nine years on heavy duty high speed machinery, running 3000 to 5,000 revolutions per minute. Some of these machines have run for four years. Respectfully yours,

FRANK BERANEK, 1900 Fisk Street.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOKS

Containing 680 pages treating on over 2000 Mechanical and Engineering subjects brought up to date. We offer this valuable reference work at the very low price of 40 cents postage prepaid.

Let us know if you want copy.

Works all the Time

That's What Our Downdraft Chimney Pots Will Do. The "EDWARDIAN"

Is the name and they stand for convenience, comfort and health in all buildings, **especially** suited to Public Buildings, Schools, Theatres, and Private Houses, Auditoriums, Skating Rinks, Etc. **Ideal Ventilation is guaranteed. It is Fireclay** and prevents **downdraft** absolutely. It can be obtained glazed or unglazed, round or square, and will fit any chimney or flue. Write for particulars. A quick seller and **new**, too. Used on all the **Royal Palaces in Britain,** as well as Canadian Government Buildings. This pot also increases the heat where needed. **No smoky chimney can exist where this pot is used.**

We have also a Patent Soldering Iron for bench and all kinds of work. It is unique. One Iron will do the work of two and costs less. Write us. It will pay you to get this line for your trade. We also carry a splendid variety of **English and Foreign Glue,** and it is not only reasonable in price but it is the **Highest Grade.** It will bring satisfied customers.

Don't forget that we carry all kinds of **Painters' Supplies** and make a specialty of **British goods.** Architects specify our lines and it will pay you to prepare for the demand.

Glazed tiles of **all Colors and Sizes** for floors, walls, and fireplaces will interest you. Write for catalogue. **No order too large for us.**

Another striking addition to the Enterprise Line

The Enterprise Monarch Steel Range
WITH GLASS OVEN DOOR.
The Stove with the Daylight Oven

After a long period of experimenting and a thorough test of its efficiency, we now offer the trade this new feature added to our well-known Monarch Range.

This improvement marks a great step forward and will place our agents still further ahead in their respective communities. It commends itself at sight and will be a seller from the start. This Range was shown at the recent Exhibitions in Toronto and St. John and has created much interest among the trade. Active dealers wanted at all points in Canada (wherever agents have not already been appointed) to handle our line of Stoves, Ranges and Furnaces. It is one of the most attractive to be found in Canada. Descriptive circulars on application.

The 400 Series Base Burner

is the greatest heat radiating Base Burner on the Canadian market.

We say this, being familiar with the stove, and realizing the great new feature---the three exposed flues.

These exposed flues are the secret of the heating possibilities of success of the 400 Series Base Burner.

When you are selling Base Burners why not handle the best that can be procured?

Just let us know, and we will supply you with circulars.

McClary's

London, Montreal, Toronto, Vancouver, St. John, Hamilton, Calgary Saskatoon.

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

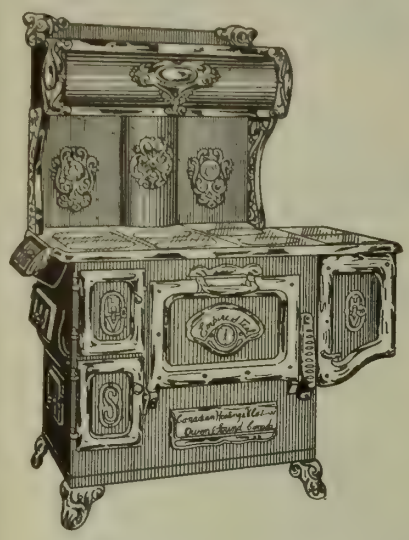
How We Are Specialists

Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

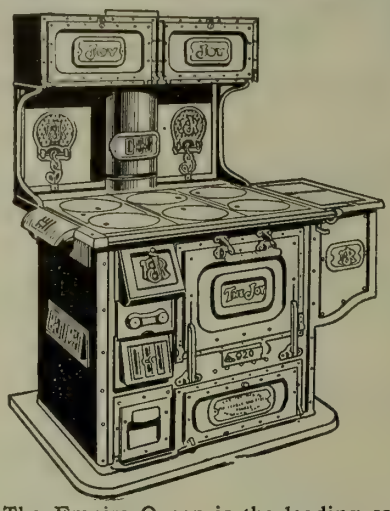
There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

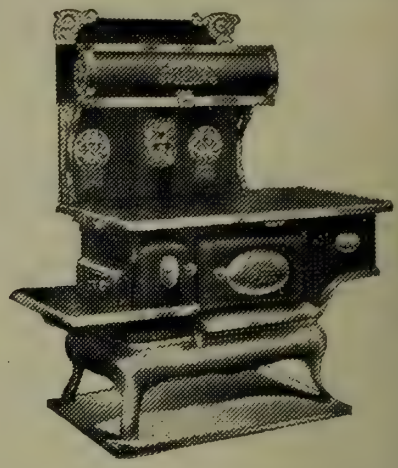
"Our Plan"



We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.



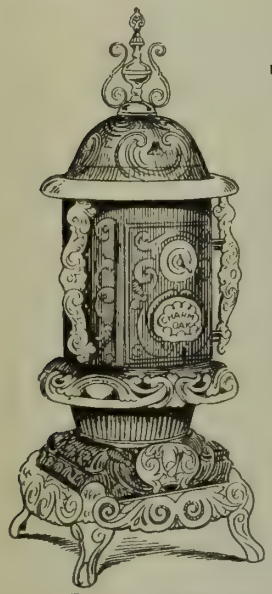
We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.



MALLEABLE IRON RANGE CO.
Beaver Dam, Wisconsin

ARE YOU HANDLING **Our Three Leaders?**

The Empire Queen
The Empire Steel
The Joy Malleable



The Empire Queen is the leading cast range, and is guaranteed. It has every up-to-date convenience—thermometer, coal grates on slide, handsome nickel dress and plain smooth castings.

The Empire Steel is a range that is built to wear, and comes in a handsome nickel dress. It has a perfect fire box, two flues, a large boiler door, as well as a quick heating and interchangeable reservoir.

The Joy Malleable is a range that will not warp, crack or break. It is manufactured in four different sizes and is the most perfectly constructed range made in Canada. It embodies all modern improvements and features.

Easy to operate—Easy to sell

The latest triumphs in Fuel Saving and Heating Stoves are the two illustrated. The

"CHARM OAK" and "PERFECT HOT BLAST"
(on left) (on right)

In the "Charm Oak" a special construction does away with the smoke nuisance at the door so common in the Oak stove, and this stove is designed upon the latest lines for convenience and economy.

The "Perfect Hot Blast" is the latest and most up-to-date hot blast and smoke consumer on the market. It has extra large radiating surface and improved ash pit, shaking door and air-tight construction.

FAWCETT RANGES were awarded a Diploma and Gold Medal at the Dominion Exhibition at St. John this month.

They are pre-eminent for cooking qualities, durability and heating power.

Moreover, there is a splendid profit for the dealer handling Fawcett Stoves and Ranges. Send for catalogue and details.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Why Genasco is easy to sell

Genasco has the right foundation. It is made of Trinidad Lake asphalt—the greatest waterproofer known, for nature has never been beaten at waterproofing.

The countless imitations made of manufactured or artificial waterproofers soon show they cannot stand the test. They are fast being found out. That makes customers cling more firmly to

Genasco
Ready Roofing

—the roofing made of genuine natural asphalt that they all know about and rely upon.

They want Genasco for its high quality and long wear. That is one thing that makes selling so easy.

Another: Our continued vigorous and attractive campaign of national advertising educates, urges, and compels them to act.

And our strong backing for every Genasco dealer combines to produce a mighty selling force that increases his sales and adds to his profits.

Write us now for full information and hearty co-operation.

"Brantford" "Roofing"

Is made in three styles—ASPHALT, RUBBER and CRYSTAL. There is a good margin of profit on each.

Instead of buying three different styles of roofing from three different manufacturers, and opening three separate accounts, you can buy three different styles from us, and open one account—a more satisfactory arrangement for you.

The Brantford Line is complete. With Brantford Asphalt, Rubber and Crystal you can supply every high-grade roofing requirement.

Brantford Asphalt has the popular silicia sand finish. Brantford Rubber is a smooth-surface roofing of exceptional quality. Both Brantford Asphalt and Rubber are made in three weights. Compare our No. 3 weight with three ply roofings and see how much thicker ours is.

Brantford Crystal comes in heavy weight only. It has a real mineral surface of rock crystals. It requires no painting.

Each of our three styles has a pure wool felt foundation, and a 99 per cent. pure Asphalt saturation. We believe they are the highest-grade ready roofings on the market. They will build business for you. And there's a good margin of profit for you in each roll. Write us to send you samples and prices immediately.

Time to Prepare for the Christmas Trade

Buyers Should Place Their Orders Early so as to Get the Best Assortment—Novelty Plays a Large Part in the Selecting of Presents—A tendency Towards the Useful Article—A list of Fancy Goods for the Buyer—Do not Forget the Toys—Merchants must do a Little Extra Advertising—Storing Goods for Customers.

October is none too early for merchants to consider the question of their holiday trade. In the first place the sooner the orders for the stock are given the better the chance of getting the best lines being shown on the market. Novelty plays a large influence in the Christmas demand. A customer is naturally attracted by something that is entirely new, and therefore the merchant who gets his order in first stands the best chance of picking up something that will sell well. A novelty is often first placed on the market only in a tentative sort of way, and thus while it is a novelty the supply is limited.

Again, lines get more or less broken as other merchants make their selection, and the dealer who leaves off his buying until the last minute finds that he has to take goods that if it had not been a question of Hobson's choice he would not have bought. The purely holiday goods being somewhat of a new feature to the hardware industry require more careful watching and buying than the staple lines. The articles selected must be of such a character that they will appeal to the customers as the right kind of present, and although the question of price naturally carries weight, the holiday trade has this advantage over the everyday trade of the store that people in buying a present are more inclined to consider the article and its suitability as a present than the price.

The merchant, therefore, must not be guided by price and stock himself up with certain articles simply because they are cheap. He must ask himself if they are attractive; if they would appeal to him if he were buying a present for one of his family; if they are novel; and at the same time sold at such a price that comes within the limits of what his experiences tells him his district can best stand.

Such an extensive number of suitable articles are now on the market that the merchant can have little difficulty in getting a stock together that will satisfy all the requirements of the holiday demand, and yet number among it no article that is in any way incongruous in the hardware store, or likely to be dead stock even if the line does not sell completely out during the Christmas trade. A glance at other stores during Christmas will show that many merchants display lines that are entirely outside their scope of genuine trading operations. The hardwareman is fortunately placed. He has not to do this, and therefore the fact that he has been so slow to take up the holiday trade is all the more incomprehensible.

Staple Lines as Presents.

But times are changing. The merchant realizes that he is magnificently placed to cater for the holiday trade. His whole business system enables him to do the trade without any dislocation. His counters and show cases lend themselves to display. His stock comprises many articles that can be effectively pushed as purely holiday goods, and he can duly emphasize the point that his Christmas stock comprises not only articles that are attractive and fancy, but those which are useful and serviceable. The Christmas trade is getting more and more inclined towards the useful article. It is recognized that the best present is the one that confers the greatest boon on the receiver, and therefore the hardware merchant is in the best of position to cater to this. It simply means good advertising and good displays on the part of the merchant to swing a great percentage of the present-buying demand to the hardware store.

There is no reason why when people think of buying a present their thoughts should not at once turn to the hardware store just as when they think of buying currants they go to the grocery establishment. When one takes a cursory glance over the many articles that are carried in a hardware store it is surprising how many of them can be considered as especially good Christmas presents. For instance, take the case of carpenters' tools. Here are lines which will appeal not only to the boys, but to the heads of the family. The merchant could make a little combination set himself and put them up into an attractive looking cardboard box. Then there are household lines such as kitchen supplies, house furnishing goods, bathroom fixtures, lamps and also sporting goods. The merchant must not forget that although he may be perfectly aware that these articles are extremely useful as Christmas presents the large percentage of his customers do not realize the fact and it is up to him to dispel this ignorance. It is not necessary to point out the valuable part that cutlery, silverware and cut glass play at this time of the year.

Fancy and Show Goods.

Then again there is the razor trade which now that the safety kind has become so exceedingly popular is a very extensive one. With the unique combination sets and various shaving utilities now on the market, we have a line that is not only bound to be a good seller, but help to widen the sphere of operations of the merchant. But apart from what can be called staple articles, there is a large variety of fancy goods which the hardwareman can buy, and which he can push not only at Christmas time but all through the year. It must not be forgotten that although at Christmas the demand for presents is at its high water mark, yet people are being married all through the year, birthdays are being celebrated every day and if a customer is pleased with a present bought at Christmas the store will be favored on other occasions. There is no reason why the hardware merchant should not only have an extra Christmas trade, but that he should have regular patronage through the other months.

For instance, one very useful present is the cheap watch. And yet quality has not been sacrificed for cheapness. There are watches which are guaranteed for a certain number of years and which are within the limits of most pockets. These articles are useful from the little boy and girl to people of older years. Then there are the great variety of clocks,—all at a reasonable price.

Pretty presents too, can be had in Art Metal, leather and in china, useful ones in smoking sets, manicure and toilet sets, thermometers, fire place goods, bird cages, call bells, urns, umbrella stands, feather and fancy dusters, brown and white stoneware, lamps, gas and electric portables and electroliers.

Then comes the greatest thing of all, the toys. Among the many attractive articles that can be sold are toy trains, horns, tops, card games, cardboard games, magic lanterns, drums, dominoes, pianos, checkers, steam engines, automobiles, baseball gloves, sleds, boats, paints, stereoscopes, wheelbarrows, blocks, bells, doll heads, rifles and air guns, express wagons, dog collars, aluminum child's mugs, cups and saucers and napkin rings.

Advertising Holiday Lines.

In connection with the Christmas trade the hardwareman must remember that it is necessary to do a little extra advertising and window display. He must not forget to let the people know that he is carrying these lines. Not only must the window be decorated but the interior must have Christmasy appearance. The store must radiate the spirit of the times, a feeling of good cheer must predominate in all directions. Then again, as the large percentage of the trade is for children, children must be specially catered to and therefore the hardwareman must see that whatever decorations or whatever display he makes he must have something which will attract the eye of the children.

Sporting Goods Window Display Made by Kingan Hardware Company, Peter boro.

Originality Shown in Seasonable Window Displays

Hold Display of Building Paper—Attractive Window of Lamps —The use of Stuffed and Live Animals in Windows Dressed With Guns and Ammunition—The Most Talked of Window in Guelph Made Attractive by Use of Pair of Live Foxes in Cage.

Guelph, Oct. 8—The retail hardware men of this city have during the past month shown a great deal of originality and enterprise in carrying out some unusually attractive schemes of window dressing.

A couple of weeks ago, in the window of the Bond Hardware company's store there was a display of building papers that struck the writer as being a very good one for several reasons. First of all it was timely just at this season of the year when people who have hen houses, stables, or outhouses of any kind which they want to make snug for the winter are naturally looking for suggestions of this kind. The management of the retail department of this concern seemed, however, to appreciate the fact that such a display would only appeal to the comparatively small portion of the citizens who happened to be doing some light building work, for he only left it in for a few days. The scheme was a bold bid for the attention of the passer by. It was arranged to resemble a fortress or battlement, with the mouths of cannon peeping over the formidable barricade. A suitable window card reading "Fortify your stable or outhouses against the cold blasts of winter" drove home the argument appropriately. The display was very simply made and with a minumum amount of trouble and scarcely any expense, the castle wall being represented simply by a few yards of the paper unrolled and tacked across a corner of the window. The top edge of it was cut to represent the deep indentions such as are seen on the tops of castle walls and the paper was painted off in squares to represent stone work. Peeping over the imitation battlements were rolls of various kinds of building paper for cannons, and with a few trimmings, such as dustless sweepers scattered on the floor approaching the wall to represent turf, the thing was complete.

A Good Lamp Window.

The week following the same window had a very attractive display of coal oil lamps; an unusually good back ground to this display being afforded by the use of an immense Japanese umbrella, about ten or twelve feet in diameter, which when opened out completely filled the back of the window and covered the woodwork. The display of standing lamps began with a row low down to the floor of the window and raising as it reached back to the back, each row of lamps being a little higher than the one in front of it. The same idea was carried out with the hanging lamps which were hung from the ceiling high up to the front and got lower towards the back, almost meeting the top line of the standing lamps. The effect thus obtained was not only pleasing, but it arrested attention.

Animals for Sporting Displays.

Nothing, perhaps, sets a sporting goods, particularly a gun and ammunition display off so much as the introduction of a live or stuffed animal. The live animals, of course, attract more attention, but on the other hand the stuffed ones have the advantage of giving much less trouble. Here in Guelph during the past week both have been tried with a considerable amount of success.

"There's just this about it" said one local hardware man in talking over this feature of window dressing with the writer, "if you can have them clean, and comfortable and happy in your window, then there's nothing like a live animal in a display of this kind, but I would ten times rather have a stuffed fox or wildcat, or even a few stuffed birds in the window, than a dirty, uncomfortable looking animal of any kind. If the live animal in your window does not seem happy and content there, his presence will do you more harm than good, for people instead of being interested will feel sorry for 'the poor thing' as they will call it."

In this form of window display the Bond Hardware Company scored another decided success. They had a large corner window decorated with autumn leaves and evergreens, making it look as much as possible like a little bit of bush

in autumn. The floor strewn with leaves was beset by a dozen or more traps of various sizes and kinds, while rifles and shot guns were worked into the scheme by being arranged in the corners and along the sides of the window. In the centre, well to the front, was a half cylinder shaped wire cage, about a yard and a half wide and about two yards long. The cage was set upon a piece of heavy linoleum which was covered with sawdust and leaves. In it were two of the cleanest, prettiest red foxes one might wish to see. The little animals appeared to be as comfortable as could be, and seemed to enjoy their prominent place immensely. They were fed right there and, not being at all bashful, ate just as heartily as they might have done in the woods.

A show card advised the public to "Be Foxy and Buy it at Bond's." Many attractive displays have been carried out in this Bond's best window, but it is safe to say that the firm never had a more talked of or more admired display than this one. After the foxes had been there several days, they were removed before the place began to smell, as it undoubtedly would have done had they been left there too long. The place of the cage in the centre is now filled with a half dozen or so shot guns standing on their butts and leaning with muzzles all into the centre where they are fastened together. A few bags filled with golf sticks are seen scattered through the display, showing that the firm is aware of the fact that interest in golf is being aroused in the city, and they are anxious to meet the demand that is being created for golfing outfits.

On a smaller scale, but also very attractively arranged, was one of the windows of Richardson's store. Here, too, evergreens and autumn leaves are used, although the smaller size of the window necessitates the use of smaller cedar trees. Some fine points of the window dresser's art are here evidenced in the great care that has been exercised in attending to some small but important details. For instance, at the base of one of the small trees, running lengthwise across the window, was a rough length of moss-covered log such as one sees only in the bush. Traps here were also set amongst the leaves on the floor and 22 and 32 calibre rifles as well as a few popular models of shot guns were displayed to advantage.

Stuffed Lynx and Caged Squirrel.

This window was not without its touch of life either, for a very lifelike though stuffed lynx looks savagely out around the largest of the two cedar trees. The mount on which it stands is covered by leaves so that it looks very natural. On the other side of the window is a cage with a live chipmunk. When the writer was talking to G. A. Richardson about the display that gentleman told of a very odd occurrence that had suggested to them the idea of adding the squirrel to the display. The morning after the gun and ammunition window had been put in the clerks were surprised by a visit from a fine big red squirrel. At first they thought it was a rat and all joined in the chase. When they saw that it was a squirrel, however, one of the staff suggested that they get it in the window and shut it in there to make the display seem more realistic. The window was opened, and as it looked more like home to the little red visitor than any other corner of the store he soon made for it. "Some of those traps are set" cried one of the staff in despair, but before Mr. Richardson could get into the window and spring the set traps the squirrel had jumped onto a large fox trap and became securely caught. They liberated him right away but his eventful career closed with this exciting incident, for the springing of the big fox trap meant almost instant death. This suggested the squirrel idea and a caged chipmunk was secured to take the place of the unfortunate little volunteer.

Bargain Window of Guns.

While the two stores mentioned have been pleasing the nimrods of Guelph with their attractive displays, one of the windows of McMillan Brothers' hardware store has been making a purely businesslike and practical though perhaps a less attractive appeal for attention. Here Mr. McMillan has a bargain window of guns and ammunition. The goods are displayed in an orderly manner and any particularly good values are ticketed with big plain price cards, thus appealing to the economic side of the passer by. This merchant is attempting to attract by prices alone while his competitors up the street are atrtacting people by the beauty of their displays and leaving the pricing of the goods to be done after the prospective customer has entered the store. It would de difficult indeed to say which is the better plan. No doubt each is good in its place.

EFFECTIVE PETERBORO WINDOW

An attractive window of sporting goods arranged by H. J. Hanwell, for the Kingan Hardware Co., Peterboro, a fortnight ago, is shown in the accompanying picture.

The ground or base of window was covered with hay, while the background was the window curtain, covered up here and there with branches of cedar giving it a rustic appearance, kites, eagles, ducks and squirrels were posed in natural positions on the right of window, and the centre was a pyramid of boxes of shells by various makers, Dominion Cartridge Co., U. M. C. and Winchester, the poster of the U. M. C. being displayed across the window. Guns and rifles were placed in positions where onlookers could see them, the price being placed on each one displayed. On the corner of the window was a lighted sign supplied by E. C. Atkins & Co., to advertise their saws.

The window caused a lot of comment and was the means of selling a lot of goods.

FOUR WINDOW COMPETITIONS.

From now until Christmas special attention should be paid to the windows of hardware stores. Displays should be changed twice a week if possible or once a week at least, and the trimmer should plan a series of displays in advance so that displays can be quickly changed.

To encourage increased interest in window dressing, therefore, Hardware and Metal announces two competitions, one closing December 1 and the second on January 1.

Two Sets of Prizes.

In each competition two sets of prizes are offered, one for entries received from hardware merchants or clerks in places over 5,000 population and another for entries from places having a smaller population.

In each competition a prize of $5 in cash is offered for the winning photograph, while for every photo. accepted for reproduction a yearly subscription for Hardware and Metal or Busy Man's Magazine will be given at the option of the sender of the photo.

Competition Ending Dec. 1.

Photos forwarded as entries in the first competition must be of displays of guns and ammunition, lighting fixtures, cutlery, stoves and house furnishings, builders' hardware, mechanics' tools or other seasonable lines. Special harvest or Thanksgiving displays, in which grain or farm products are used to trim the window will also be admitted, but the trim must be secondary to the goods shown.

Competition Ending Jan. 1.

Photos forwarded in the second competition must be of holiday gift goods, such as silverware, cutlery, shaving sets, cut glass, sporting goods, toys, lamps, tool cabinets, alarm clocks, watches, photographic supplies, or any other staple or special line sold in hardware stores.

Points to be Considered.

In making the awards the editor of Hardware and Metal will be assisted by two experienced window trimmers of acknowledged ability; and attractiveness, selling ability and originality will be the main points considered. For instance, the attractiveness of a window would be judged by its power to draw the attention of passers-by the selling ability of a window is increased by the use of price tickets and originality consists in introducing new features in making a display attractive in appearance.

All photos should be accompanied by a letter describing how the goods were arranged, the conditions under which the photo was taken, and the results secured from the display.

Photos should be sent to the editor of Hardware and Metal, 143-149 University Avenue, To-

PUBLISHED EVERY SATURDAY.

CALL THE CLERKS TOGETHER.

Just now one of the most important things a hardware merchant can do is to call his staff of salesmen together and talk over plans for getting a larger share of the profitable holiday gift trade to be done during the next ten weeks.

The man who does the buying, the clerks behind the counter, the window trimmer, ad. writer and book-keeper, and even the delivery boy, should be given an opportunity of making suggestions as to what goods to buy, and how to display, advertise, sell and deliver them.

There are few merchants who do not put forth every effort to make the next Christmas outshine in preparations and in profits the one that has gone before, and he is already well on his way who knows where his last effort can be improved upon, where the staff, regular and temporary, can be strengthened, or where his last year's stock fell short. All this information cannot be stored away in tablets of memory but the best system is to have some data to steer by.

The ideas adopted for next Christmas must be something original or at least mark a departure from that featured before. Now is the time to plan, to hold a conference and adopt plans which will not only increase sales and profits but make the cogs of the business wheel run smooth at the time when it is carrying its heaviest load—during the rush of Christmas trade.

Make one member of the staff responsible for the ad. writing, another the window dressing, etc., and see that their work is planned well ahead. Then encourage a friendly rivalry and ask every member of the staff to jot down some suggestions and hand them to you in, say, a week's time.

The first thing to do is to get together and enlist the co-operation of the entire staff. Then keep in close touch with what is done, encouraging every member of the store force to do his utmost for his own and your good.

THE DELIVERY OF GOODS.

Now that the Fall trade is beginning to swing in freely we should once more strongly advise retail merchants to pay close attention to the delivery of their goods, for prompt despatch is one of the strongest assets that a merchant can command. It can be easily understood that no customer likes to be kept waiting unduly for something that has been purchased earlier in the day. Not only does delay mean a certain amount of disappointment, but it may also mean serious inconvenience. For instance a farmer may arrange to have a team call for an order. If the goods are not ready for that team he has to bear the loss of time involved. Then again, a customer may arrange to call at a station to meet a certain train which should be carrying the goods. If the goods are not sent by that train this man has a right to complain. Then again, say, in the case of paint. It may be that the consumer has only a certain limited time in which to use the stuff and he has ran the matter so finely that any delay will prevent him from carrying out his purpose. If the merchant fails to let the man have the goods then the purchase is of no use to him.

There is no greater force in advertising than the comments of the public. If a store is well thought of and the opinion freely expressed that the merchant and his ways of doing business are in the common vernacular O.K. then this store is being advertised as well as any newspaper or circular campaign could do it. Just think what it means to a store if the comment "I like to deal with Mr. So-and-So., because he is so prompt in sending goods" is made. This is worth a good many dollars and cents to the merchant.

One hardwareman bases his whole success as a merchant upon the fact that he put first and foremost all through his business career, the necessity of prompt delivery, although to do this he had often to get to his store at five and half-past five in the morning. The writer knows of a traveler who likewise bases whatever success he has secured to the fact that as soon as he possibly can he dispatches every order received at once to his house with instructions that delivery must be made forthwith. Even if he has to send in, during the course of the day, many different envelopes to his house, he pursues this plan. The result is that there is little time wasted and as his house co-operates with him there is a force at work which tends to a very great stimulation of business.

If a merchant finds that owing to the varied assortment of the order he cannot send the whole consignment promptly, then he should tell his customer so and send what he can. It is a great mistake to take the order knowing that prompt delivery is impossible and yet saying nothing to the customer. It is true that the merchant may not state that the goods will be sent promptly but by saying nothing he lends himself to the inference that the goods will be dispatched. Retail merchants who have hitherto paid little attention to this part of their business system should take it seriously in hand for it is one of the strongest planks by which a merchant can gain success.

POOR SALESMANSHIP.

What a lot of salesmen there are who seem to think that price is the only thing a customer thinks of. When they present an article for inspection, their first words are "That is $1.80; here is a better one for $2.40."

In a Toronto hardware store last week a customer asked for a half pint of floor stain to touch up a small space. The clerk, a young Englishman, offered a line selling at 15 cents, but it was not put up attractively and the customer asked: "Haven't you so-and-so's?" naming the manufacturer of one of the best advertised paints.

"No, we only carry their paints," was the clerk's reply, "but, anyway, their stain would cost you 25 cents."

Here was a customer ready to pay for quality and the clerk, instead of encouraging the desire, offered the inducement of cheapness in order to make his sale.

Most people buy things, not so much because they need them as because they want them and, that being the case, they are more interested in getting just what they want than in a few cents difference in the price. Tell them about the style, quality, desirability of the article —make them want it, and steer clear of the price until they ask for it.

If you follow this rule, you will find the total of your sales increasing surprisingly.

A very striking electrical sign has been set up in Denver. The sign represents a skyrocket shooting from the ground to a height of 150 feet, where it expodes into hundreds of sparks that fall in a shower to the ground. This effect is produced by successively illuminating a string of lamps running up the side of the building to the top of a tall framework on the roof. Over a thousand lamps are used to produce the effect.

PAYS TO FOLLOW ORDERS UP.

A hardware dealer who has a large implement trade among the farmers in his vicinity makes it a practice to keep an after-eye on the implements he sells.

Of course, it is impossible to follow up the fate of every implement; but he manages to keep in touch with a majority of the farmers to whom he makes sales and displays an active interest in the working of his goods. Through this means he is always able to refer intending purchasers to previous purchasers who are well satisfied, and upon whom he can rely to boost his particular lines.

This also enables him to give prompt attention to complaints, which are sure to arise, even with the best working pieces of machinery; and thus to forestall the farmer who might otherwise give the goods he has purchased some very harmful advertising among his neighbors. As a rule these complaints are found to be trivial, due in most cases to an incomplete understanding of the workings of the machine; and, once explained, there is no further difficulty.

A source of much difficulty this dealer finds to be the practice common among many farmers of leaving valuable machinery out all winter exposed to the elements. As a result of this practice, an implement which ought to have ten years of life not infrequently goes to pieces at the end of three, and rarely gives anything like satisfaction after the first year.

Though the argument is sometimes advanced that this sort of thing is good for business, since the farmer must replace the worn out implement with another, the dealer realizes that there is no direct benefit to him. The farmer as a rule, blames the implement for defects which are the result of his own carelessness. Hence, he aims wherever possible to forestall this trouble by inducing the farmer to provide proper covering and protection for his implements. Lack of barn space is often urged by the farmers with whom he deals. To meet this objection the hardwareman went to work some time ago and designed an implement shed, and, in conjunction with a carpenter, figured out how such a shed could be built at comparatively little expense. Now, after placing an implement, the hardwareman takes occasion to urge upon the farmer the wisdom of proper care and covering in wet and stormy weather, and as a result frequently secures an order for his carpenter friend for one of these sheds, in not a few instances himself obtaining the contract for metallic roofing and siding after the shed is complete.

He finds that as a result the implements give better satisfaction than where they are neglected, and each satisfied customer is a help to new sales, not only of the implement sold in the first instance but of anything else the hardwareman takes the trouble to recommend.

NEITHER HERDING NOR HOUNDING.

The daily and weekly newspapers throughout the country are taking up more enthusiastically than ever before the work of developing a greater loyalty in the matter of home trading. It has been discovered that considerable patronage goes to the mail order house by the business man himself, and that on different sides the attitude assumed is that it is a poor melon that isn't ripe on both sides. In other words, a man in one line of business has to complain of mail order trade, though he patronize it himself, he has no right to object if men who could use his goods, send away to have their requirements filled. In some towns there seems to have been no attempt at co-operation among merchants to deal with this problem.

One publisher, who has adopted the plan of addressing a letter each week to some section of his readers, is pressing home the importance of organization. Of the women he asks: "Will the women of this town take part in a campaign to encourage home trading? If they will join in the fight, organize, and use their powerful influence in this good cause they will do more good for suffering humanity than the W.C.T.U., missionary societies, ladies' aids, etc., have or can accomplish."

Now that the newspapers are taking up this matter, the merchants can give significance to the movement by supplying actual instances as to the merit of home values, facilitating comparisons where possible, and otherwise demonstrating the justice of their position. All appearance of coercion must, of course, be avoided, or the adoption of any policy which would give to people the impression that they were being herded or hounded. It must be done by wide-open co-operation which will bring the best interests of the community home to every person capable of conviction.

MARKING CHARGE CHECKS.

On all charge checks there should invariably appear not only the full name of the person in whose name the account stands, but also the full name of the person who makes the purchase. If the charge customer makes the purchase in person, add on the line below her name. "by self." If the purchaser is some other member of the family, set down the name correctly. Sometimes there are several members of a family who buy on the same charge account, and it is not sufficiently definite to set down "daughter." This is apparently a trivial matter, but it sometimes turns out to be important. Where bills are rendered at intervals of thirty days, and are not always paid promptly, the customer may easily forget one among many purchases. It is, therefore, just as well, for the store's protection, to be able to state positively by whom the purchase was made.

MERCHANT OR MONEY LENDER.

When a manufacturer sells a merchant or another manufacturer a bill of goods on 60 days' time he is virtually loaning his customer the price of those goods for that time. The customer takes the merchandise loan for granted, and is very apt to seek, by delays and excuses, to extend the original 60 days without interest a much longer time. In discussing this question recently an exchange pointed out that if the buyer were to go to his bank and borrow the money necessary to pay for the goods on the same 60 days' time he would not only have to pay the legal rate of interest but a premium besides, and if he did not meet the obligation on its maturity would have to satisfy the bank that the account was good and collectible, and of course pay interest for the extended time.

Does the salesman realize when he is closing a sale with a customer that he is virtually lending that customer a sum of money equal to the value of the goods for the period that shall elapse before payment is made? And does the buyer realize that in asking for credit, be it for only ten days, he is asking the seller the favor of a cash loan? Unfortunately the salesman is rarely as careful to secure himself on his merchandise loan as the bank would be in making a money loan. And unfortunately the buyer, from his superior hight, sometimes fails to realize that when he "favors" the seller with an order he is asking a favor in return.

A realization of this actual relationship between buyer and seller would lead to greater self respect and firmness on the part of the seller, and, what is more important, fewer losses; while there is many a buyer whose attitude toward the seller would be vastly improved by a recognition of this homely truth, and who would steer his course clear of many a dangerous financial rock thereby. The seller is a partner with the buyer to the extent of his sale during the period elapsing until payment is made, and as such has a right to know the financial condition of the creditor. This sense of partnership is rarely recognized by either party to the sale.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Domestic Lead—10c advance.

Toronto.

Sash Cords—Up 2c.
Sash Weights—Advanced 5c.
Tin—Up 1c.
Brooms—Lower by 30 p.c.

MONTREAL.

Oct. 14.—Barring an advance in domestic lead of 10c no change is again reported in the local markets. All lines are very firm in sympathy with the primary markets. In fact for many months the situation has not been so firm. Looking at the circumstances, however, which have given rise to this condition one cannot feel any degree of certainty that this state of things will be prolonged. There is too much speculation and not enough genuine consumptive buying to be assured that the metal markets generally have become staple, and on a solid basis.

Locally trade is good, and jobbers and first hands are satisfied with the business done during the month. The growing strength of spelter has stimulated the demand, while on the other hand the speculation in tin has checked ordering except where the metal is wanted for immediate use. There is a great scarcity of Canada plate, but prices this week have not been advanced. Copper and lead have been in steady request. Old Country pig iron is being rushed through by importers, and the demand continues good. Canadian furnaces are busy, and report no anxiety as to future business.

High prices in tin have been made in London, and the syndicate seem to have as tight a hold upon the market as ever. As we stated last week, spot stocks have been controlled in New York and the large orders placed in London greatly helped the bull party. Between the two operations tin naturally continued inflated. One result of the manipulation has been that other grades of tin besides Straits have been more freely bought. Copper in sympathy with tin, and firmer figures in London, assumed better figures in New York, and holders have been getting a point or two more for the metal. Legitimate buying is dull. Spelter continues very firm in London and St. Louis, while lead make a few points during the week. The iron and steel situation in the States is devoid of any special feature. There has been some juggling in prices but conditions are about the same as before. Moderate business is being done. Cleveland warrants have become stronger, probably owing to the better feeling due to the settlement of the cotton dispute.

Pig Iron—There is an increasing activity in imported iron circles, due to the fact that the time for close of navigation is drawing near. Warehouses will not stock up until the last boat or so. Domestic furnaces are actively employed, but willing to take business. We quote No. 1, $18 to $18.50; No. 2, $17.50, at furnace Middlesboro; No. 3, $18; Summerlee, No. 1, $20.50; No. 2, $20; No. 3, $19.50. One promising feature in the United States iron market is the tendency to quote higher prices for future delivery, and figures in many cases have been met. Prompt quotations have not been changed.

Tin—The highly speculative character of the primary markets still tends to keep back booking ahead, and only orders for metal actually wanted are being placed. Still, business is very good locally, as stocks generally are on the light side. Jobbing prices continue to be quoted at 37. The London bull operators have maintained their position, and helped by a cornering of spot supplies in New York, figures have not shown much signs of any break away. Heavy business has been placed in London on American account. The situation is not one that tends to encourage trade or to put tin on a solid basis.

Copper — Copper is unchanged at 13½c. Buying is very steady, and concessions for good round lots not so easy to obtain. Inquiries show that a little more interest is being taken in the market. This is probably the result of the slightly firmer tone in New York. The bulling in tin has naturally tended to strengthen copper, while London in a speculative way has shown higher figures. Legitimate consumption, while good, has not shown any signs of taking care of the enormous production that is still going on.

Spelter—The market is still exceedingly firm, but no advance is reported. Buying in anticipation of an advance has improved, and some very satisfactory orders have gone through. Both the English and St. Louis markets are firmly held, and strong consumptive buying is reported, with anticipation of higher prices.

Lead—An advance of 10c is reported in domestic lead. Trade is fairly good, stimulated by the higher tone of the markets. The English market shows a firmer tone, and active trading is reported during the week.

TORONTO.

October 7.—The market remains almost stationary, both in regards conditions and prices. There is abroad the same hopeful undertone, but as yet no big business has developed.

Trading is much better than in the middle of summer, though the improvement from week to week has not been great. Importers of pig iron are sizing up the situation having in mind the business likely to materialize before next spring so as to base an estimate on supplies to be ordered before the close of navigation in the St. Lawrence.

All the metals show more steadiness. Tin has recovered the cent it lost last week and lead is somewhat firmer. Iron and steel products are active, which lends strength to the promise of better trading in pig iron later on.

Pig Iron—The business now being done continues to move in small lots, with orders more frequent than during the past several months. Domestic furnaces and metal jobbers are after whatever business offers. Quotations remain at $19.50 for No. 1, and $19 for No. 2, f.o.b. furnace, with 50c a ton added for local delivery. Middlesboro No. 3 is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Jarrow is $20.50 and Glengarnock, $22.50.

Tin.—This metal has recovered its strong position held previous to last week. The local quotation is back again at 37c, and the market is firm at that figure. Trading is active. Large quantities of tin have come to America during the past month, though stocks being pretty well depleted are not too high.

Copper.—The market continues firm, and copper is likely to become more active soon. The local quotation remains at 13½c. Both production and consumption are still running at high figures, but there is not now the talk about curtailment of production that there was two months ago. Industries using copper as a basic metal are becoming more active with a consequent increase in demand.

Sheets and Plates—All kinds of sheets and plates are decidedly active with stocks light. Canada plates are still scarce and running light. The higher prices of a week ago hold the market firmly. Tin plates seem strengthening for an advance. Deliveries of these goods are very slow and behindhand.

Spelter.—Spelter is held firm under the pressure of the movement in London, but no change in prices is reported. Concessions are not made very willingly for large lots. Trade is good, the probability of local prices being advanced stimulating buying. The English market is steadily advancing and is getting closer to the £24 mark. St. Louis is firm. Trading is active and sales satisfactory. Quotations running at 6c to 6¼c. The prospect is for firm prices on a steady market.

Lead. — The market shows great strength and this metal is now holding an excellent position on the market. Stocks are frequently changing hands. Lead is moving better now than for many moons past. The situation is entirely satisfactory. Domestic lead is at $3.75, with imported 5c higher.

Old Materials.—There is a somewhat quiet tendency to all old metals and materials this week and the past week. Dealers are rather stocking up than selling, though deliveries have been light.

Dealers are paying the same figures they were offering last week: for heavy copper and wire, 11 to 11½c; for light copper and bottoms, 9¾; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½c; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

October 14.—Fall trade has opened out well, and although merchants are buying carefully they are looking confidently ahead. Stocks are being well assorted, and with plenty of assurance that jobbers can ship promptly as present indications go, merchants are content to order lightly but often. Travelers report that conditions point all the way round to a good consumptive demand, while merchants state that collections are much better.

There has been a decided stimulation in cutlery and silverware, while houses dealing in more fancy lines state that buying for the Christmas trade in china, art metal, toys, etc., has started in well. Guns have fallen off, although a fair sorting trade is being done. Ammunition keeps up well. Winter sporting lines such as skates and hockey sticks are now prominent. Lumbermen s supplies have received stimulation and boot calks, axe and axe handles, and snowshoes are showing a steady call. Stoves, ranges and coal hods have been in better request, the colder weather quickening the demand.

Builders' hardware continues to be a steady and prominent line, and as building locally is decidedly above the average the demand should continue at good strength for some time. The country trade shows signs of falling off. Nails are still selling well.

Weather strip, sleigh bells, snow shovels, lanterns, stable fixtures, as well as ordinary utility lines are in steady request. No important change in prices is announced, and the market all the way round is firm and of a good tone.

Seasonable Lines.—The colder weather has stimulated the movement in fall and winter lines especially locally and steady orders are coming in for weather strip, sleigh bells, horse blankets and stable and barn fixtures. Stoves and ranges are in better request. Miscellaneous lighting goods are showing a fair demand. General household lines including enamelware, are in steady call, especially from the Northwest. The market is firm all the way round, with stocks in dealer's hands on the light side.

Cutlery and Silverware.—The approach of Thanksgiving day, and further on the Christmas demand has greatly stimulated the call on these lines. Dealers are buying in better assortment than used to be the case, while a higher grade article is selected. Carvers in cases, pocket knives, forks, berry spoons, pickle frames, and bonbon dishes are prominent.

Sporting Goods.—The demand for guns is falling off, although sorting orders are coming in steadily. But the requirements are light. Ammunition continues to sell well, while camp supplies are also in brisk demand. Skates and hockey sticks are in very much stronger call, and snowshoes show greater activity. Gymnastic supplies are good sellers.

Builders' Hardware.—Still prominent builders' hardware contues to more steadily. The country trade shows signs of falling off, but locally owing to the building boom trade is keeping up splendidly. The market is unchanged, and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Bolts and Nuts.—The demand well maintains its strength. Nails are also in good request, repairing work producing a good consumptive call. The market is firm. We quote: Discount on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—The market is unchanged, with orders showing good strength. We quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ¼, $3.25; 1, $3.25; anchors, 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each.

Wire.—There is a good tone to the market, and jobbers report fair buying. We quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80; galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal; coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots; plain wire, bright, annealed and annealed and oiled, $2.35 base; staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Oct. 13.—Both the jobbing and retail hardware trade show some little expansion over last week. The enlarged crop movement in the West has tended to make marketing freer and has also helped hardware trading. The business now passing is better than was anticipated, although even as it is jobbers state they could look after further orders.

Sorting up seems to be the principal feature of trading, and also there are some pretty heavy deliveries being made of early winter goods.

Probably the most prominent line is sporting goods. Guns and ammunition keep on going forward quite lively. Shovels, scrapers and wire mats are the active winter lines. Builders' hardware is a good line locally and in the larger Ontario towns where building is going on.

Broom prices for the season are expected to be in force to-morow (15th). They show lower prices by about 30 per cent. Sash cord and sash weights have advanced slightly; the former is up 2c and the latter 5c.

Booking for spring and summer of staple hardware lines is now on, but it is somewhat early to prophecy as to what the outcome will be. Practically the same prices which ruled this year will hold good for next.

Seasonable Goods.—Sorting-up of fall stocks is going on at present with orders calling for some early winter staple lines. Wire mats, sleigh bells, weather strips, ice scrapers and snow shovels are the leading articles moving. Horse blankets, and stall fixtures are in good request for immediate delivery. In fact all barn and stable goods are fairly active.

Builders' Hardware. — Trading continues good locally, though jobbers note an easing off in demand from country points. Building papers are in demand. Metal shingles and sheets are in good demand with price pretty stiff. General city demand continues its steady gait, and orders are not only well assorted but well distributed. The market is firm.

Household Goods.—New broom prices are expected to-morrow. As noted last week there will this season be lowering in price of between 30 and 40 per cent. Similar quality brooms that retailed at 50 and 60 cents last year will this year go at 35 and 40 cents, and it is quite likely that 25 and 30 cent brooms will again be offered. Kitchen tin, granite and enamel ware, washing machines, mops, clothes baskets, wringers, etc., are the principal lines moving.

Heating and Lighting Goods.—Lamp goods are still prominent, but sales are steady rather than increasing. Sales of gas and electric fixtures, too, are developing into steady grooves, though the Christmas season is naturally expected to show increased sales. Stoves and ranges are very busy at country points. city business running more to gas ranges and hot air furnaces, the latter of which are making business exceedingly brisk.

Sporting Goods.—The sorting-up demand for guns, ammunition, cartridge belts, etc., continues very strong, and jobbers are satisfied with the trade doing. Skates and hockey sticks are now being taken for early delivery. There is an improvement in rugby, football supplies, and gymnastic outfits. Prices are steady again. Some good sales have been made of better grades of pen and pocket knives and general cutlery lines are beginning to show more signs of life.

Heavy Hardware.—Bars, pipe, and rods are becoming active again. Structural iron is exceptionally so. Factory repairs are calling for a variety of metal articles and tools, and also rivets, bolts and nuts. There is a good tone all the way round. Orders are well assorted and delivery is wanted quickly. A good demand for bolts and nuts of all sizes is noticed, and with dealers' stocks on the short side delivery is wanted immediately.

Wire.—General lines are in fair demand. The market is unchanged.

Christmas Goods.—Inquiry for holiday and presentation goods is fair. Iron toys are increasing their hold on the trade, judging from enquiries.

U. S. METAL MARKET.

New York, October 12.—The Iron Age says:—Reports from the leading pig iron markets show varying activity, but all agree that the impulse to general buying is still lacking. On the whole, Northern foundry irons have been more active than Southern grades. Northern Ohio furnaces have made a fair aggregate of sales, in 1,000 and 500-ton lots, to foundries in Indiana, Michigan and Western Ohio, for delivery in the first half of 1911. These were largely on the basis of $14 at furnace. Not all furnaces will sell as low; for some it means actual loss, and relief in lower ore prices is seven months away. In the Pittsburg district late sales of basic have been at $13.25 Valley furnace.

It is plain that some important buyers of finished material are counting on further reductions in price. The real test will come when the attempt is again made to buy on a large scale. Values have been known to be held better through a period of light buying like the present than on the first appearance of attractive tonnage at the end of such a period.

HAD HIS HOLIDAYS FREE.

J. R. Hambly, Barrie, returned from Western Canada this week after a ten weeks' trip during which he visited many places in Manitoba, Saskatchewan, Alberta and British Columbia, besides visiting Seattle and other points in Washington State. Mr. Hambly has returned in splendid health and with a wider knowledge of the possibilities of the west, Calgary being the point which impressed him most favorably.

A feature of Mr. Hambly's trip worth repeating is the method adopted to finance it. He took $100 with him when leaving home and had a $20 bill when he landed in Toronto on his way home, having drawn nothing from the business during his absence. He stopped at Banff and other high class hotels and his expenses totalled nearly $300.

How did he do it? Like scores of other Ontario hardwaremen Mr. Hambly has hundreds of dollars worth of book debts owing him by former customers who have removed to the west. He took a list of these and, wherever he could conveniently do so, he made collections. He figures that he not only raised enough money in this way to finance his trip but from collections which he has arranged to make, he will clear the entire expense of the trip out of debts which he would never have collected if he had not gone after them personally.

Here's a shrewed method of financing a holiday which other merchants may be able to copy to advantage.

HARDWAREMEN ORGANIZE AT QUEBEC.

The hardware merchants of Quebec city have organized a hardware section of the Association of Retailers of Quebec. The section has been formed with the idea of regulating prices, and the settling of any disputes which may arise in this particular line of business. The following officers were elected: president, J. E. Martineau; first vice-president, M. Lemeux, of Samson and Filion; second vice-president, Herman Young; treasurer, J. A. Young; secretary, Alex. Parent.

HARDWARE TRADE GOSSIP

Ontario.

The Chatham Wagon Company intend to enlarge their plant this fall.

W. J. Bell, Beeton, returned last week from an extensive trip through Western Canada and Pacific Coast States.

J. S. Bowbanks, who for many years has represented the Starr Mfg. Co., Dartmouth, N. S., in Ontario, has opened up fine showrooms at 122 Wellington St., West, Toronto, having also secured the Canadian agency for Thos. R. Ellin, cutlery manufacturers, Sheffield, Eng. Mr. Bowbanks has an attractive display in his showrooms of skates and cutlery manufactured by these two firms, and will carry a complete stock of both lines in Toronto.

R. E. Thorne & Co., Montreal and Toronto, who established the Canadian Bronze Powder Works, at Valleyfield, Quebec, several years ago, and later took over the Valleyfield Iron Works, and developed a large foundry casting business, making a specialty of brass and aluminum castings, have extended their foundry business to Toronto, having taken over the foundry of the Martin & Worth Co., Peter Street, where they will also make brass and aluminum castings.

Quebec.

The trade generally will be pleased to hear that one of their most genial members, M. J. McLaughlin, assistant to G. A. Childs, manager of the wire department of the United States Steel Products Export Co., Montreal, is to be married on October 27th, in Montreal, to Miss M. E. Pratt, daughter of F. Pratt, and grand-daughter of the late John Pratt, who was one of Montreal's leading citizens, being President of the Harbor Board, and also identified with many other commercial enterprises.

The hardware store of C. J. Laviolette, Montreal, was destroyed by fire this week owing to some benzine becoming ignited.

Western Canada.

F. B. McEown, hardware merchant, Saskatoon, has enlarged his premises.

W. E. LaBorde has opened a tinsmithing business at North Battleford, Sask.

The Imperial Oil Co. will erect a distributing warehouse at Tofield, Alta.

The Western Glassware Co. have started a wholesale business at Edmonton.

E. W. Caspell has sold his hardware business at Cayley, Alta., to Scragg & McMeekin.

V. S. Long, hardwareman, Red Deer, Alta., is building a large business block in that town.

James C. Hilberry, hardware merchant at Red Willow, Alta., has admitted J. W. Barber into partnership.

The Dominion Linseed Oil Co., it is understood, is contemplating the erection of a $40,000 building at Regina.

C. A. Farquharson, hardwareman and harness dealer, High River, Alta., has sold his harness stock to R. A. Ballard.

United States.

John Bing, New York representative for Bing Bros., Nuremburg, Germany, has been appointed agent for Canada and the United States for Koehler-Ehmann, Laufamholz, Germany, fancy clocks; R. V. Hunersdorff, Nachf, Stuttgart, Germany, household specialties; and Wilhelm Rudi, Urach, Germany. kitchen utensils.

IRON MINING IN ONTARIO.

It is announced that the iron ore deposits lying along the route of the Kingston & Pembroke Railway are to be developed by American capitalists, a company known as the Julian Hawthorne Silver and Iron Mines, Limited, being now selling stock for development purposes. These ore bodies are situated near Wilbur and Robertsville, and comprise altogether 17,237 acres.

The history of mining in this section of eastern Ontario has not been as successful as it is claimed the richness of the ore deposits would warrant. To be carried on successfully, iron mining must be on a large scale. Heretofore the parties working the properties are said to have carried on the business in a "hand-to-mouth" manner, simply taking out the best ore, shipping it, and on the money received carrying on the work until another shipment could be secured. This policy was detrimental to the progress of mining, but notwithstanding this poor way of mining the ore, there has been, it is claimed, over 100,000 tons of ore shipped from the Wilbur properties. The new company, from the very outset plan to ship 1,000 tons of ore daily, and inside of six months they expect to increase this to 2,000 tons per day. The company will ship the ore by rail to Kingston, where it will be loaded on boats for shipment to Cleveland and other lake ports. Careful estimates, it is said, show that this ore can be laid down in Cleveland at a lower cost than the ore from the iron ranges in Wisconsin, Minnesota, and northern Michigan.

In addition to the cheapness with which the ore can be mined, treated and shipped, there are said to be practically inexhaustible quantities. In one ore body on the Wilbur property there is, it is claimed, over 6,300,000 tons of ore. This quantity is practically in sight. In addition, they estimate that on the balance of the Wilbur property investigated there is in the neighborhood of 40,000,000 tons. The other properties will largely increase this total, thus indicating that the supply of ore is almost unlimited.

The Hawthorne Silver & Iron Mines Company, also own mining properties at Temagami in Northern Ontario.

W. G. Scott & Co., Mount Forest, have sold out to F. E. Hendershot, of Winnipeg. The business was originally established by John McLaren.

Hardware and Metal Subscribers' Letter Box

CONDENSATION ON TANK.

"Ignorance" writes: "We have a customer who installed a large galvanized tank, holding about 15 bbls., in a small room over his kitchen which is never heated. He pumps water from his well into the tank with a windmill. The moisture in the air condenses on sides of tank and runs in pools across the floor. Can you or any of your readers suggest a remedy? A soft water tank in the same room into which water runs directly from the roof, gives no trouble."

The water pumped up from the well is of a much lower temperature than water drained into the soft water tank from the roof of the building. The temperature of the air in the attic is higher than the water coming from the well and the warm air coming in contact with cold water causes condensation on the outside of the tank until such time as the water in the tank becomes warm. The manner of overcoming this is to enclose the tank tightly with a lid and cover same with a packing of hair felt or some other non-conductor, thus stopping the circulation of air which causes the condensation.—Editor.

LIGHTING SUPPLIES.

A. A. Shirley, St. Andrews, N. B., writes: "Our hardware store is lighted with a kerosene lamp which uses Welsbach mantles, the lamp being called "The Fellboelin." We are having considerable difficulty in procuring mantles and chimneys for these lamps, and would like you to furnish us with the address of the Company or agency which sells these supplies.

Canadian Welsbach Lighting Co.—Editor.

HORSE CLIPPERS.

Peart Bros. Hardware Co., Regina, ask who is agent for Newmarket horse clippers in Canada.

Burman & Sons are the manufacturers, and B. & S. H. Thompson, Montreal, are Canadian agents.—Editor.

AIM TO HELP RETAILERS.

I have read with a great deal of interest your account of the objects and functions of the Canadian Credit Men's Association, and your editorial thereon.

I am glad to note that so well known and widely read a trade journal as yours recognizes the benefits to be derived from an Association such as ours. There is no doubt, under present conditions, that co-operation is absolutely necessary among all classes, and the objects which the Association has in view are so obviously beneficial to the community as a whole, that we deserve, and should receive, its unqualified support to elevate business conditions to promote the dealings between retailer and wholesaler; to assist the retailer in the many hard and important problems which come before him; to eliminate as far as possible fraud, and to punish it where it actually occurs. These are things which make for the well-being of business conditions, and while the Canadian Credit Men's Association is composed of wholesale merchants, at the same time it is a fact that a large part of its work will directly interest and concern the retailer, so that what you have said with reference to the retailer having a part in our work should meet with very responsible recognition.

What we should have, and what we strongly desire, is the effective co-operation of the retailer. If we can help him in insurance problems, if we can weed out the fraudulent merchant, if we can promote legislation which will tend towards better conditions, he should give us the benefit of his moral support, even if he does not take steps through any association to back us up. I do not know how it may be in the east, but it would seem from past history out here that, except in some localities, retailers have never been able to get together. While their necessities are practically the same, still they spread over vast stretches of country, and they have not the same cohesion as the wholesalers who are located in a few centres. I think it is from this cause and not owing to any lack of intelligent appreciation of the situation, that retail organizations heretofore in the west have not been successful.

With reference to the wholesalers, the large number of members who have joined us, and the constantly increasing list of our membership, is evidence that the work which we are doing is filling a want which has been recognized by the community. With the backing which we have now, the Canadian Credit Men's Association, if properly managed, should be a power for good, and I hope that those wholesalers who have heretofore held aloof, wanting to see how the Association was going to pan out, will now see their way clear to join it. The work will go ahead and be done just the same; but the larger our membership the greater our momentum, and the better results which can be accomplished.

One word more on the prosecution of fraudulent debtors: I know of no more demoralizing occurrence in a district that a fraudulent failure. It is always the cause of poor business to those who are honestly conducting their affairs. It unsettles the mind of the community. It offers temptation to others, if successfully carried out. I know of a case where there was a studied and successful attempt at fraud, and for two years business conditions in that place have been unsettled. The merchant in question in attempting to defraud his creditors sold a lot of goods for much less than cost; he took produce from the farmers in exchange for goods at very much more than the produce was really worth, and after he had, by this means, lined his pockets, he skipped to the States. Those honest merchants who were left had to re-arrange the conditions of their business, and as for the farmer in that neighborhood, he feels he is now being defrauded because he cannot get prices which the absconded debtor gave him.

That is a concrete illustration of how we propose to help the retailer, if we can elimiate or materialy reduce the fraudulent failure.

H. H. Pigott,
President Canadian Credit Men's Association.

Winnipeg, Oct. 4.

COTTON BELTING.

G. Ledham & Son, Port Rowan, Ont., ask for the names of manufacturers of canvas elevator belting.

The Dominion Belting Company, Hamilton, Canada, Label & Webbing Company, Toronto, J. Henry Peters Company, Toronto, and F. Reddaway & Co., Montreal.—Editor..

LIFTING JACKS.

Handy Jacks Manufacturing Co., Sarnia, write for the names of different kinds of lifting jacks.

Wagon jacks are made by the London Foundry Co., London; and the James Smart Manufacturing Company, Brockville; screw jacks by the John Watson Manufacturing Company, Ayr; and B. Bell & Sons, St. George; and hoisting and lifting jacks by the Jenckes Machine Company, Sherbrooke, Que.—Editor.

LACK OF COURTESY.

The writer would like to call the attention of some of the Western Hardwaremen to their neglect in answering applications for situations, made in reply to their own advertisement. The writer has known of many instances, personally and otherwise, where an ad. has been inserted in the leading papers, the applicant enclosing a self-addressed stamped envelope for reply, which has been totally ignored. It seems very strange that progressive hardware firms would not use more business etiquette, and at least reply when stamps are sent.

A SUBSCRIBER.

Toronto, Oct. 10.

News and Methods of Canadian Hardwaremen

Prices of Various Lines Advance at Halifax—Window Displays at Peterboro—Store Decorations at Saskatoon.

PRICES ADVANCE AT HALIFAX.

Halifax, Oct. 8.—Mackerel are being caught at some points along the coast, and there is considerable activity in fishing circles. This will help the hardware trade later on. A prosperous season for the fishermen always makes business brisk in hardware lines. Collections are quiet, but there are some signs of improvement.

There has been a further advance in the price of linseed oil of five cents per gallon. It is now quoted at $1.20 per gallon in barrel lots. Sheet zinc is also higher at 7½ cents in cask lots. While there is as yet no further advance in turpentine on the local market, English advices quote a further rise, which will probably be in evidence shortly. Canadian white lead is 25 cents higher at $6.25 for 25 and 50 pound irons. Cotton goods such as cotton lines, twines, nets, etc., are firm. Wire nails are quoted at $2.50 and cut at $2.70.

The demand for builders' supplies shows a heavy falling off, and the plumbing business is very quiet, only a jobbing trade passing at the present time.

One of the most artistic of the many beautiful displays at the recent Provincial Exhibition held in this city, was that of Morton & Cragg, the progressive young Halifax retail hardware merchants. The exhibit represented the interior of a modern equipped residence, fitted up with the latest house furnishings and it certainly reflected great credit on those who arranged it, as it was complete in every detail. The firm were awarded a gold medal for the exhibit.

NOVEL PAINT WINDOW.

Peterboro, Oct. 10.—Last Saturday was the busiest day in Peterboro for some time. Nearly every farmer coming in had on his wanted list an order for glass and putty. Painting has not been so brisk as in other falls, the high price of oil and turpentine holding it back, everyone waiting for the long deferred drop in price of that necessity, and stores are buying sparingly, practically from hand to mouth.

All dealers report a busy time in hunting goods. Shot guns and rifles are selling freely. This being the first season for partridge for some years, everybody who has a gun is waiting for Oct. 15, partridge being very plentiful in the surrounding country. Ammunition is moving welll.

The Kingan Hardware Co. this week has a novel display of Jap-a-lac. Their north window, the floor of which required some renovating, their window trimmer hit on the novel idea of at first beautifying that sore spot, and at the same time advertising one of the many uses of Jap-a-lac. A portion of the floor has been left in its pristine condition, the portion next being given a coat of ground color and crack filler, the next a coat of graining color, and showing the Jap-a-lac graining tool with which it was grained, the final portion showing the finished floor. It has been the means of many sales. Neat show cards explain on each portion the process that portion has undergone. The various posters and window trims issued by the Glidden Varnish Co. have been effectively used in the display.

The Best Stove Company and Higgins Hardware Company report a busy season in heaters and stoves. Their tinsmiths and furnace hands are all working overtime.

Adam Hall & Son have decided to relinquish their retail store, and during the past week have been disposing of their stock of tin and graniteware, stoves and heaters, by means of a sale, and report a rushing business. They intend to keep only to their line of steam and hot water fitting and plumbing, and to go more largely into manufacturing their lines of ranges built for hotels and lumbering concerns. They have erected a foundry alongside the Grand Trunk tracks, where they will employ about 40 moulders and machinists.

Mr. Forsythe, the mechanical superintendent of the Lundy Shovel & Tool Company, has resigned his position. The company has secured two experts in shovel manufacturing from the old country. The same firm has applied to the city council for a franchise to lay pipe on the streets of the city, with a view to supplying natural gas.

Andrew Robinson, lately head salesman with Adam Hall, has accepted a position with the James Robertson Co., of Toronto.

W. O. LaBelle, of the Kingan Hardware Co., is confined to his house with sickness, and all his friends will be pleased to soon see him around again.

The Peterboro Hardware Co.'s new wholesale warehouse is nearing completion.

STORE DECORATION.

Saskatoon, Oct. 8—An example of what can be done by retail merchants in the way of decorating the exterior of their stores is shown in the accompanying picture of M. Isbister & Son's store, as arranged during a recent celebration here. One of the windows was used to display cutlery, and the other binder twine, while the doorway was decorated with bunting and grain, surmounted by a large deer's head. Flags and bunting completed the decorations, a large flagpole rising above the center of the store from behind the sign on the roof.

Exterior Decorations on Isbister's Store at Saskatoon, During a Local Celebration.

NOW if that stock of *Stephens* House Paint of yours was broken in the Summer rush, this is your chance, and even if it was not badly broken it soon will be, and you don't want to lose a single sale of this profitable line.

Think it over---look over your stock, and then send in your orders. We have a full and complete line and will ship same day as order is received.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Oct. 13—Travellers' orders for the past week have been remarkably large, and for a wide range of goods. In addition to the staples, splendid orders are coming in for specialties, sporting goods, and holiday stocks. The prolonged period of excellent weather has continued the demand for builders' supplies and interior finishings to a remarkable extent. Not only in this centre, but in all the chief towns and cities in the three provinces enormous building operations have been in progress, and the work on finishing the year's plans will be extended far into the winter.

There has been a particularly heavy demand for Canada Plate, and factories have been taxed to the utmost to deliver the goods. At the present time the orders from Western merchants are a little weaker, but small shipments are being made to every corner of the West. The trade in cutlery, skates, sporting goods and horse-shoes is very good, and merchants everywhere are planning for a good winter's trade. Heating stoves for coal, wood and oil, are all going well, and the many new stores that have opened up during the past summer, together with increase in population, has stimulated all branches of the stove and furnace business.

Coil chains are about to be reduced on the Western market. This does not affect logging chains, as the duty on these is 30 per cent., while the duty on coil chains is only 10 per cent.

Winnipeg Hardware Quotations.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75

Auger Bits—"Irwin" bits, 47½; other lines, 75 per cent

Bolts—Carriage, ⅝ and smaller, 65; 7-16 and larger, 55; machine, ⅝ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron — Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—Planished copper, 30c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corugated iron, 28 gauge, $3.87; pressed standing seamed roofing, 28, painted. $2.83; galvanized. $3.87; 26, $3.24.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white 70 and 5; diamond, 50; grainte, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2, and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process —No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50; Galvanized, 1¼ in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼ in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $4.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.25.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper, No. 8, 39c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c. Coppered, No. 8, 18c.

Rope—Sisal, 9½c; pure manila, 11; British manila, 9¾; lath yarn, 9½c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—22c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $6.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.75.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box, $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed Wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2,90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.25.

Paints and Oils.

The paint and oil market is very active, and prices are stiff. Dealers have been compelled to advance prices everywhere, and it would appear that everyone is resigned to the present quotations in all lines. Mixed paints have been advanced with all other lines, and it is significant that the demand has not been abated on account of the market condition.

Putty and Glass—There is a rumor that putty will be advanced, and it is possible that the $3 price will be quoted very soon. Glass is going well, and the demand is strong for the wired glass. Putty in barrels, $2.90; cases, $3.15; kegs, $3.40.

Linseed Oil—Although the price of Linseed fluctuates about the $2.50 per bushel market, there is a tendency to keep the price above the figure. So long as the prevailing condition of the seed market is maintained, the oil price will continue very firm. Boiled oil is $1.18, and raw $1.15.

Turpentine—Turpentine has been advanced five cents, and the market is as firm as usual at $1.10 per gallon to-day. The new price has curtailed the output slightly, but will revive very soon.

Varnishes—A very wide range of finishing supplies are moving, and at present the varnish trade, perhaps, forms the major part of the business at the present time. The quality of interior renovating in all western buildings is excellent, and many handsome structures are yet to be completely finished.

White Lead—The white lead market is steady, and the product is moving moderately. The price continues at $5.75 to $6.25, according to the brand.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 24c; Searchlight, 22c; Red Rose, 25½c; Keystone Special, 20c; Pemoline, in bulk, 19c; Silverlight, in bulk, 15c; Acme lamp, in bulk, 27c; White Rose, in bulk, 22½c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

THERE isn't apparently much difference between paint that's made from the very best raw materials that money can produce and paint that's made from adulterants. That is, the casual observer doesn't notice the difference simply by looking into the can. But the difference shows when the paint has been applied for a while. Time is the test of good paint.

SHERWIN-WILLIAMS PAINT, PREPARED

in the can may look like a great many other paints which are said to be as good. But put it to any test you will, and it will come out a winner. The reason is plain—its makers have a reputation second to none in Canada and would not for one moment consider putting anything but the highest grade materials and workmanship into their product. What's the result? A paint that you should handle because it's right in every way. It will add to your reputation, as it will give satisfaction to your customers. Get our proposition, and stock SWP. Gurney Foundry Company Honors Retiring Manager

W. H. Carrick, for 36 Years With the Gurney Foundry Company, Tendered a Complimentary Dinner and Presented With a Cabinet of Silverware, on Leaving to Accept Management of the Gurney-Tilden Company, Hamilton.

About one hundred guests assembled at the National Club on the evening of Friday, Oct. 7, on the invitation of Mr. Edward Gurney, president of the Gurney Foundry Company, Toronto, to meet Mr. W. H. Carrick, who recently resigned as general manager of the Gurney Foundry Company to become president and manager of the Hamilton Stove and Heater Company, successor to Gurney-Tilden & Co., Hamilton.

EDWARD GURNEY,
Who Made the Presentation to Mr. Carrick After 36 Years of Loyal Service.

The guests included representatives of the office, sales and factory staffs of the Gurney Foundry Company, representatives of the trade press, and business and personal friends of the guest of the evening.

After an appetizing menu and the contents of a song sheet had been disposed of, the former putting the inner man in good humor while the popular songs brought the company into closer harmony "The King" was honored in usual style.

E. HOLT GURNEY,
Manager of the Sales Department of the Gurney Business.

The last song on the vocal bill of fare closed with :

What's the matter with father, he's all right,
What's it matter if father's hair is white ?
I'm very strong for the other sex,
But Dad's the fellow that sends the checks,
What's the matter with father, he's all right.

This brought Edward Gurney to his feet, and he said it gave him exceeding pleasure to look around on the faces of so many friends he had done business with and realize the strong bonds of friendship which held them together. Growing reminiscent Mr. Gurney confessed that he was born in Hamilton in 1845, and lived there until 1868, having spent many happy years as a member of the fire brigade and learning his early business lessons under the leadership of his father and uncle in the business now known as the Gurney-Tilden Company. "Hamilton is an attractive city and it has attracted my oldest business associate," concluded Mr. Gurney, "yet it seems fitting that the old Gurney-Tilden Company where I started my career, should be managed in its turn by a man who has learned what he knows of the stove and heating business as my right hand man."

W. H. CARRICK,
Who was Honored by the Staff of The Gurney Foundry Co.

Appreciation From Former Associates.

"We could not let Mr. Carrick leave us," continued Mr. Gurney, "without expressing our appreciation of his long and faithful services, and I ask him to accept from his former associates on the Gurney Foundry staff this cabinet of silver."

"I find myself to-night totally unfitted to respond to your very kind and flattering address," said Mr. Carrick, "and am unable to find adequate words that express to you my heartfelt thanks for your beautiful gift. I cannot but feel that the present occasion is the greatest in my life, as it marks my separation from the good old firm many of us have been so long connected with, and the severing of a daily association with a loyal staff who always were willing to co-operate in the work and responsibilities of a great business.

"I cannot tell you how deeply I feel the parting and how much I will miss you all in the future. After a service of 36 years one finds so many ties that it is a wrench at my very heart strings to break away from. I regret that fate deemed it necessary to have a parting of the ways at this late date, however, I feel proud of your esteem and friendship as evidenced by this handsome token of your good will, and I do hope that the cordial and kindly feelings may always continue between us, and although separated from each other, I trust we may all be spared for a useful and happy future.

"I congratulate the firm on the splendid staff of men operating its great business throughout this country, and my standard and aim will be, if possible, to have my new business officered by just such an able and efficiency body of men. Again I thank you all for your many kindnesses to me in the past and if I re-

ceive from my new associates the same help in the future, I shall be satisfied."

Mr. Carrick's health was enthusiastically toasted and he was given three rousing cheers and as many "tigers."

Responding to the toast of "The Shops," W. Cromwell Gurney, the new general manager of the company, spoke of the loyalty of the members of the staff and added his appreciation of Mr. Carrick's work. W. H. Gibson, who also responded to the toast, spoke of the friendly rivalry existing between the manufacturing and office staffs but said his department could easily make good the shortcomings of the business and advertising staffs.

"The Office and Sales Staffs" were next toasted, the responses being made by "Sunny Tom" Alcock, the silver haired secretary, of the company, and E. Holt Gurney, sales manager. The former was told to "Put on your old grey bonnet" but he replied that though his hair was grey it hadn't been caused by business worries. He told of the affection in which all the members of the office staff had held Mr. Carrick and promised loyal support to the new general manager. E. Holt Gurney, said he had just returned from the Pacific Coast and members of the selling staff in both the east and west had sent messages of regret at being unable to bid farewell to their former manager. Mr. Gurney took advantage of the opportunity to tell some stories of persistency, application and closing ability on the part of the members of the Gurney selling staff. "We have the goods, and we have the men," concluded Mr. Gurney, "and with the exercise of good salesmanship our business will grow greater and bigger than ever."

A pleasing incident at this point was the introduction by Mr. Edward Gurney of John Wright, the company's oldest employe, he having been a member of the mechanical staff of the McGee foundry in 1868, when E. & C. Gurney, father and uncle of the present head of the company removed from Hamilton in 1868 and took over the McGee business. Mr. Wright told of how he had worked in the shop side by side with Mr. Edward Gurney.

In proposing the toast of "The Trade Press," Mr. Gurney spoke of the changes which had been brought about in his time as a result of the development of a better feeling between competitors. Formerly each manufacturer was very reticent about matters concerning his own business but new ideas had taken root and business competitors now came together and discussed costs and other manufacturing problems to the advantage of all. He himself had been able to assist, as an outsider, in the formation of one of the largest stove organizations in the United States. The trade press had been an important factor in creating this better feeling.

In responding to the toast, Weston Wrigley, editor of Hardware and Metal, introduced himself as the oldest member of the Gurney sales staff, the advertising pages of Hardware and Metal having been a medium of bringing before the stove dealers of Canada the many improvements and new lines produced in the Gurney foundry during the past score of years and the same service could be given Mr. Carrick in building up his Hamilton business as had been given to him while in Toronto. Appreciation was expressed for the courtesies, treatment and many news items given to Hardware and Metal by members of the Gurney staff and the point made that it was the constant endeavor of the trade press to create good feeling amongst retailers and between retailers, jobbers and manufacturers. George H. Honsberger, manager of the Stove and Heating Journal, also acknowledged the toast, telling of how he had learned the lessons of the alphabet from the Gurney name on the kitchen range in his boyhood home.

In bringing the evening to a close Mr. Gurney said the business men of Canada had cause to congratulate themselves on the splendid condition of the country. There is work for all in this country and enterprise has a chance to secure its proper reward. "We will not say good-bye to Mr. Carrick, we will but say au revoir."

STOVE REPAIRS IN WINDOW

The window display of ranges shown in the accompanying picture was made by a Seattle store whose window trimmer saw an opportunity to feature repairs, as well as the ranges themselves. On a plain rug placed on the floor in the front of the window were shown the various parts that go to make up these ranges. These parts were all named, and their good points explained. The three ranges were shown on plush covered platforms, which raised them up about 12 inches from the floor. It was a highly satisfactory display.

Window Display Featuring Repair Parts of Ranges.

LEARN FROM STOVE PEDDLERS.

The success which stove peddlers have had in going from farm to farm should be a lesson to the dealers to do likewise. A reason lies behind the success of the stove peddlers and the reason is one of human nature—the farmer is flattered by personal solicitation.

There is still another important factor in building up a good stove trade and that is an attractive display. Stoves should not be converted into shelves for the reception of all kinds of merchandise, but should have the space they deserve. Stoves look better and can be displayed to much better advantage if they are on a raised platform in the centre or at one side of the store.

Salesmanship—the art of selling—comes in last of all the list, but is by no means the least important. In fact, many good stove prospects are lost when the sale is about to be closed, through the ignorance of the salesman. The stove salesman should know stoves. Stoves have many "talking points,"—so many points for comparison that it is necessary for the salesman to be well acquainted with their intricate parts in order to explain the superiority of one stove over another.

The experience of many dealers would seem to prove what is claimed by some of them—that a successful stove business is built upon quality to a greater extent than any other line in the hardware store. The cheaper grades of stoves bring less profit and infinitely more trouble to the dealer. Scores of dealers say that they have had more success selling $60 stoves than the $30 and $35 grades. The writer knows of a hardware dealer who keeps only one low grade stove in his store and that is to show his customers what they would get if they ordered from the catalog houses.

Push and persistency in all things pertaining to the stove trade are most needed to make it a "go."

THE DAYLIGHT OVENS.

W. Shives Fisher, president of the Enterprise Foundry Co., Sackville, N. B., was a visitor in Toronto this week, and in conversation with Hardware & Metal stated that new daylight oven feature of the "Enterprise Monarch" tseel range had caught on, and this range is now one glass oven door, enabling the housewife or cook to see how her roast or pan of biscuits is progressing without opening the oven door, is a feature which captivates large numbers of women buyers.

No. 30

HUSTLING ALL THE TIME.

From the trade that is being done by the paint manufacturers it is evident that all the way round a good fall consumptive season has set in. Even the inevitable advance in prices has not, apparently, checked the swing of orders. Opening thus under these good conditions, the fall promises plenty of business for those who go after it in the proper way.

There is too much intermittent effort in the paint campaign of many merchants. First blowing hot, and then cold, it is impossible for a dealer either to get a proper grip on his district, or to reap any fair result from the little efforts he has put out. To run a window display of paints, say for a week, and then ignore them for the rest of the season is, to say the least of it, sufficient to shut down any consumptive enthusiasm that this week's display may have produced, and so on in any other direction that the merchant may have attempted to encourage trade.

In fact, whether it is in display, or in outside advertising, the dealer must follow on in his efforts, and back one move up with another equally strong, or better still, stronger.

There must be a continuous hustle after trade. The dealer must continue his window displays, and see that his paints are well to the fore in the interior. There is little use in having a strong advertising campaign, unless these efforts are backed up by strong window and interior displays. A consumer reads about your paints at home and takes a trip to the store next day to have a look at the goods. If he sees nothing in the window, not even one solitary tin of paint, he is probably so disappointed that he may turn away without going inside. There must be strong co-operation between outside advertising and display at the store. Get the people to the place by outside advertising, and then draw them in by good window displays. Confirm their impression that this store must be the "one" for paints by having a fine interior display, and finish the process by having them looked after by a salesman who takes an interest in the customer's needs, and, who, if there is any doubt as to the customer's experience in painting, will take the trouble to point out the few hints necessary to make a painting or a staining job successful.

If a dealer shows that he is pleased with his paint department by giving it

YOUR store can safely sell one brand of paint and be sure your fussiest customer will come back and tell you he is satisfied. These paints come in tins labelled

a good location in the store, the customer is impressed with the fact. The latter feels that if these were not good paints, and that the merchant was doing well with them, the department would not be so prominently located, while the tins would not look so clean and fresh. There is a lot in this, Mr. Dealer. First impressions have great influence in the making and holding of a customer.

All the way along the merchant should pay particular attention to his stock. Always have it looking clean and fresh looking. Who wants to buy a dirty looking tin of paint, when paint is supposed to be the antithesis of dirt. Besides he may get the erroneous idea that the paint is old stock. The paint department wants careful watching, so that it shall always have the most inviting aspect to the consumer. What trouble this entails on the merchant is well paid back.

PAINT AND OIL MARKETS

MONTREAL.

Oct. 14.—Despite the bullish tendency of prices, trade continues to swing in well. The hesitation that was at one time noticed has disappeared, and buyers apparently have got reconciled to the adanved prices in practically all lines. Trade is well distributed, and it is evident that a good fall painting season has started.

No price changes are announced. Turpentine is firm at last week's figures. Linseed oil is fluctuating somewhat, but the difference in figures from one day to another is very little, and no one is inclined to prophesy as to what is going to happen in the near future. The main thing now is that supplies are short, and holders are not anxious to sell. White lead, despite the advance in price, is selling very well, and grinders' stocks are showing signs of the demand.

Liquid paints are moving splendidly, and it is evident that dealers are pushing this department vigorously. Varnishes are in good demand, not only in bulk from the large factories, but in tins from the smaller users. All the way round conditions are very good.

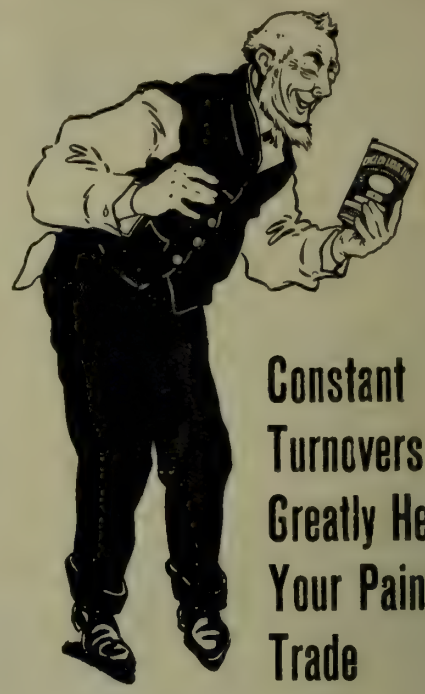
Turpentine—Prices are unchanged. The market is firm in tone, and buying seems to be more free than it was. There is less disposition to wait to see how the market is going. Supplies are in fairly good shape, and we quote $1 to $1.02.

Linseed Oil—Linseed oil is still extremely bullish, and no one cares to hazard an opinion as to what is going to happen next. Influenced by the English market, there are slight fluctuations from day to day, but in the end there is no material difference. Supplies are still very short, and holders are not anxious to part with many barrels at a time. Buying has improved, for if linseed oil is wanted, users cannot wait for the market to improve. We continue to quote $1.08 for raw and $1.11 for boiled.

White Lead—A good trade is reported in white lead, the recent advance in prices seemingly stimulating the demand. Heavy lots are going by boats, as users are apparently accumulating some stocks. We continue to quote $6 to $6.50, according to brand.

Varnishes and Japans—There has been a stimulation in the demand. All lines are moving well, and it is an evidence of active industrial conditions that the large implement and allied factories are buying varnish freely. Household lines are also in good request.

Putty—Putty is selling well, the good state of the building season making the demand very heavy. The market is firm, and we quote: 100-lb. drums, $2.60; bladders, in barrels, $2.85.



TORONTO.

October 13.—The paint market remains as at last week. All prices are holding firm. Linseed oil and turpentine are the principal commodities talked of. Sales of these two lines are not great, orders calling for sufficient quantities only to cover immediate wants.

Substitutes of these two paint articles are said to be selling more freely, now that prices are so high, and in a number of cases are meeting with fair satisfaction. For inside work benzine has been sold instead of turpentine, because of the latter's high value.

The prophecies of some of those who have been claiming that the crop of turpentine for this summer was to be much shorter than last year, seems to be verified and the statement that higher prices would prevail for the month of October, seems more of a certainty, as during last week the price at Savannah advanced 4 cents per gallon. The three shipping points where turpentine centres from the Southern States are, Savannah, Georgia; Jacksonville, Florida; and London, England. At the present time there is only one-half as much turpentine held in stock at these three points as there was a year ago, and only one-third as much as there was three years ago. The world's demand for turpentine is certainly much greater now than it has been for several years past, and the demand for supplies in the paint trade and for varnishes for the carriage and automobile business must be met as the substitutes are still looked upon as impractical. There has not been any advance made in the price locally.

Linseed Oil—In Linseed oil there is no change to report as the price of flaxseed in Chicago and other points has shown no evidence of decline, although the harvest is now pretty well past and the grain is coming forward to market. The official returns show that in Saskatchewan this year there were 393,100

Toronto New York Chicago Cleveland

acres under flax cultivation, giving an average yield of 9.66 bushels per acre. The total production for that province stands at 3,797,500 bushels. Local quotations still range from $1.07 to $1.09 for raw oil and $1.10 to $1.12 for boiled oil in barrel lots. Hardwaremen are buying lightly, and for present use only. Manufacturers are more anxious about future prices.

Turpentine—The local price is still fluctuating between $1.01 and $1.03 as at last issue. Trading at this high quotation is somewhat light.

Rosin—All grades continue to sell well at tight prices. "G" is quoted at $3.25 per hundredweight in barrel lots. Orders while frequent are for small quantities however.

White Lead.—Good business is passing and booking is fair. Prices hold firm. Ton lots of "Government standard" white lead stands at $5.65 f.o.b. Toronto, with 25 cents a hundred more asked for less than ton lots. Private brands of genuine run at least a dollar above these prices. Some good second grades said to be better than "Government standard" are quoted around $5.90 to $6 in ton and less than ton lots.

Red Lead.—Unchanged in price or condition. Genuine in casks is at $5.75 per hundred, with No. 1 at $4.25.

Putty.—Trading has improved greatly over last week, the building situation calling for large quantities. Prices are steady and unchanged. Bulk in barrels is at $2.20; in 100-lb. drums, $2.45; bladders in barrels, $2.70; in 100-lb. irons, $2.80; 25-lb. loose, $2.55; cased, $2.60; 12½ lbs; cased, $2.80. "Special" putty prices are 10 cents below these figures for like quantities, and "pure" putty 35 cents higher.

Glass.—Business is passing in good volume and sales are increasing. The higher tendency of the paint market has made glass firmer, though it is not likely from present indications that any advanced figures will be asked. The glass business is now at the top of activity in movements. Shipments are very fair.

Petroleum.—Trading is not heavy in any one line, though all petroleum goods are selling fairly well and the volume taken as a whole shows good business passing. Canadian prime white is still at 13 cents a gallon, American Water White is 14½c, and Pratt's Astral, 17c. Benzine and gasoline are now quoted at 16½c and 18½c, respectively. Benzine is being used somewhat extensively in place of turpentine for interior paint work.

H. G. Coy, hardware merchant, Anaconda, Mont., writes an annual circular letter to those of his customers whose purchases during the year have not been as large as he would like to see them. The letter states that it may be the fault of the store that it has not attracted more of the customer's trade, and it tries to persuade customers that it is the continual aim of the management to give good service and polite attention in addition to selling the best merchandise.

TORONTO MANAGER PROMOTED.

John Irwin, for the past eight months manager of the Toronto office of Brandram-Henderson, Ltd., has been promoted to the position of assistant to general manager G. M. Edwards, at Montreal. This promotion takes effect on October 15, though it is not likely that Mr. Irwin will be able to clean up his pending affairs at Toronto before the end of the month. A. W. Poole, who joined the Brandon-Henderson staff on October 1, will succeed Mr. Irwin as manager of the Toronto office. It is understood that the duties of Mr. Edwards have been increased so much of late that an assistant is necessary. The office of assistant manager was therefore created.

Mr. Irwin joined the staff of the old firm of Henderson & Potts, in the spring of 1901. In 1905 he went to Winnipeg and opened the western branch for that

JOHN IRWIN,

Who Returns to Montreal From Toronto, as a Result of a Staff Promotion.

company. In 1906, when the Marshall-Wells Company were made the exclusive distributors for Henderson & Potts, he went with them and created their paint department. In the meantime Henderson & Potts, of Halifax and St. John, and Henderson & Potts Co., of Montreal and Winnipeg, were incorporated into Brandram-Henderson, Ltd., and Mr. Irwin returned to Montreal in January 1908, as Montreal sales manager for the new company. In February 1910, he opened the Toronto branch for this concern, and now in October of the same year, he goes back to Montreal as assistant manager.

A. W. Poole, who succeeds Mr. Irwin as manager of the Toronto office, has been sales manager of the paint department of the James Robertson Co., Toronto, for the past two years. He was previously connected for several years with the F. Hammar Paint Co., of St. Louis, Mo., as manager of their sales force.

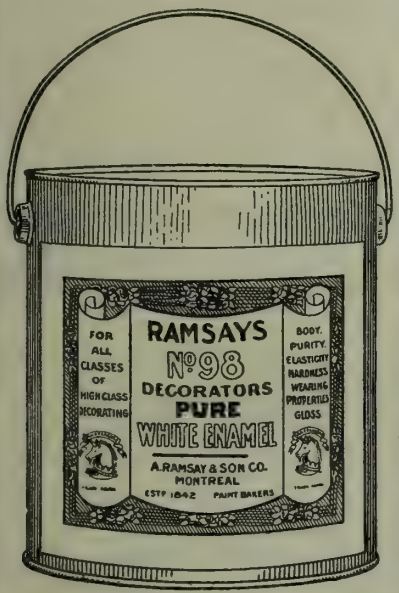
A Correspondent Asks:

"HOW CAN I TELL AND DEMONSTRATE THE QUALITIES OF THE CONTENTS OF A PACKAGE OF PAINT OR VARNISH WITHOUT OPENING THE TIN"?

Answer:

SEE THAT THE LABEL BEARS THE NAME OF

The CANADA PAINT COMPANY Limited



THAT IS QUITE SUFFICIENT AND IS A GUARANTEE THAT THE CONTENTS OF THE PACKAGE ARE THE FINEST PROCURABLE.

Pure White Enamel

At this season of the year when houses have been closed in, and outside building operations finished, a great deal of inside painting is being done.

When you are asked for a thoroughly reliable, pure white enamel—not just ordinary white—but a thoroughly reliable one, what do you do about it?

Here is the way to answer the question. Hold up a can like this.

You can do it without fear of contradiction, that no better enamel is made in Canada or imported into this country. The price is reasonable for that quality, and anyone who has used it will say it is cheap, because the quality remains long after the price is forgotten.

Ask us about it.

VARNISH AND STAIN COMBINED

To the Hardware Trade in Canada—

We wish to announce that we have completed arrangements to manufacture all of our products in Canada, having established a complete and fully equipped Varnish Manufactory at Toronto.

The large demand for JAP-A-LAC and GLIDDEN'S GREEN LABEL VARNISHES for architectural and general use, due to our extensive advertising campaign in Magazines published in the United States, will be largely increased by our advertising campaign to the consumer in Canada.

We intend to make JAP-A-LAC a household word in Canada, just as it is now in the United States, and it is to the interest of every dealer in paints to carry a stock to supply the demand we have created and will continue to maintain.

The quality of our goods is of the highest. Our experience of nearly forty years is back of every gallon we manufacture, and our experienced corps of chemists and varnish makers have personal supervision over all our products.

Our discounts to the trade are liberal, thus insuring a satisfactory profit to the dealers who co-operate with us to reap the benefit of our extensive advertising.

We solicit your enquiry regarding our proposition, which is the most attractive ever offered to the dealer.

THE GLIDDEN VARNISH COMPANY

Toronto, Ont.

Glidden

Paint and Varnish Removers.

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish in Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	Name of Brand.
The Sherwin-Williams Co., Montreal, Canada.	"Taxite"
International Varnish Co, Ltd., Toronto, Canada	"Klensa"
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	"Expedite"
British American Paint Co., Victoria, B.C.	"Bapco"
Mount Royal Color and Varnish Co., Montreal, Canada	"Scrape-off"
James Robertson Co., Ltd., Toronto, Canada	"Robertson's Paint and Varnish Remover"
Sanderson Pearcy Co, Ltd., Toronto, Canada	"Devolite
Stewart & Wood. Toronto, Canada	"Solvo"
Martin-Senour Company, Ltd., Montreal, Canada	"Martin-Senour Paint and Varnish Remover"

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

EVERY TOOL GUARANTEED

Maxwell's Latest

is the "Champion High Speed Washer." This machine differs from the famous "Puritan" only in the driving mechanism. The

Champion High-Speed Washer

is run, as the illustration shows, by a lever. This lever also starts the balance wheel, which revolves four times for every stroke. The great momentum of this balance wheel helps to turn the dolly block and makes the "Champion" run very smoothly and easily.

It is sure to be a splendid seller.

David Maxwell & Sons : : St. Mary's, Ont.

---

To the Manufacturer or Wholesaler——

If it were possible to employ a traveller who could call on thousands of the best dealers all through Canada every week, what salary would you figure he'd be worth—even supposing he did nothing more than go in and shake hands with these dealers, under such circumstances they'd be glad to see him.

Would he be worth $200, $300 or $500 per week? Many a house would pretty nearly let him fix his own salary.

Equip an advertisement in this paper with a verbal handshake for every dealer in Canada, and a frank, brief, pointed talk about your goods and you add a traveller to your staff who will make thousands of calls a week for you at a salary of $4 to $8 a week—less than you would pay a first-class stenographer.

Of course this traveller won't displace any of your regular salesmen, but he will help them to sell more goods and open up more new accounts.

"IMPERIAL" ANTI-FREEZING WINDMILL

FORCE PUMP

With improved vertical three-way, for tubular or other wells.

Six, eight and ten-inch stroke.

In Fig. 18 we have aimed to embody every good quality that is essential to a perfect pump. It is light in weight, symmetrical in design, mechanical in construction, and for beauty, strength and finish is without a peer. We are thus enabled to offer the trade a single-acting, underground three-way pump that covers the entire field, and enables the dealer to fill any order, and does away with the expense of carrying from three to five different styles of pumps in stock, different sized flanges are all that is necessary. Always fitted with 1¼ flanges unless other size is specified.

CONGO
NEVER LEAK ROOFING
The NEVER-LEAK GUARANTEED ROOFING

Congo on Maryland Terra Cotta Company's Buildings Baltimore, Maryland

We don't suppose you care a rap what Congo is made of—what interests you is *how long it is going to wear.* What it is made of interests us because we give with every roll a *Surety Bond Guarantee,* the like of which no other manufacturer has offered.

Herewith are a few of the features that make it possible for us to guarantee Congo 2 or 3 ply for *10 years.*

It never gets hard or brittle. It never breaks or peels off. It is giving as perfect satisfaction in Europe, India and Australia, where we ship thousands of rolls, as in America.

Congo doesn't run, rot, buckle up or shrink.

The caps, nails and cement which we furnish free, are the best money can buy.

We don't use the old *tin caps* for Congo, but *galvanized caps* which never rust.

FREE SAMPLE

You can satisfy yourself as to its lightness, pliability and wonderful waterproof qualities by writing to-day for a Free Sample. As to its wearing properties—we guarantee them. Can any reasonable man ask more?

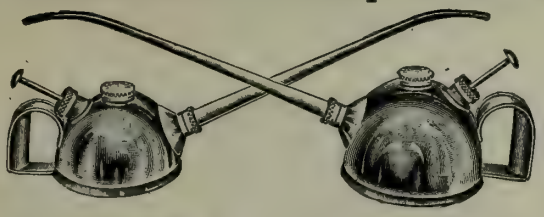
The IRONCLAD *Alarm*

"It Rings to Beat the Band."

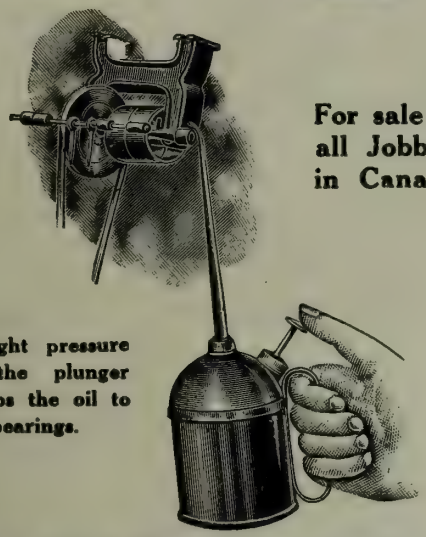
OUR alarm movement is the *lightest running* made.—It revolves on wire pivots, 21 thousandths of an inch thin. It's as *frictionless* as can be turned out.

When you mount it in cast iron *armor,* you combine the *easiest running* movement with the most effective *shield* known—and you have the IRONCLAD.

It's the *longest lived* and most *punctual* alarm it's possible to make. If it's *cleaned* every other year, there's no telling how long it will last.



Height 5 inches. Dial 2¾ inches. Weight 2½ lbs.
Rings 35 seconds; can be shut off at will.—Display boxes sent upon request.



Stocked by 28 Canadian Wholesalers.

Sell Clark Heaters and Coal

Here's the "BIG HIT" Assortment

2 Leader Heaters
2 No. 5B Heaters
2 No. 7D Heaters

6 Dozen Clark Fuel Brickettes
(Best Grade)

Some of these heaters you can sell as low as $1.20 and make a good profit.

The Proposition to Dealers is Mighty Interesting

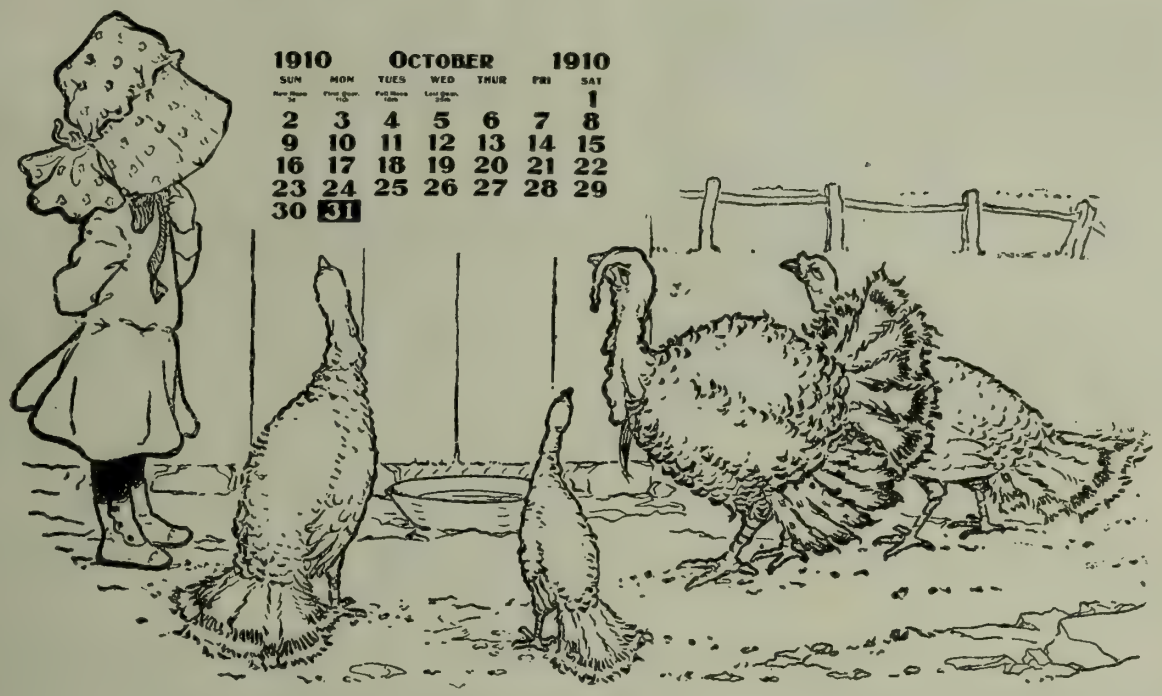
Its a proposition that means ready sales and liberal profits.

Everyone who drives or owns a carriage, wagon, sleigh, automobile—any kind of vehicle—needs them. Everybody traveling in cold weather needs them. The need is known—the demand is positive—It's for the dealer to supply the product and pocket the profits.

Clark Heaters and Clark Coal sell wherever displayed. The wonderful compactness, the unique principe of heat distribution, the neat appearance, the low price—all are factors that make Clark Heaters the unchallenged leaders.

Our guarantee goes with each, and the guarantee protects the dealer and the consumer.

And the coal is just such another proposition. To **prove conclusively** that it's better than other fuel, we give a guarantee, **with each brickette,** that it will give 25 per cent more heat than any other heater fuel made.



DEALERS——ACT NOW

The season is on. Send for the "Big Hit" assortment and add more dollars to your profit. Send to your jobber. Put a heater just inside your store—where customers can **feel** the goodness of it. "Warm them up" to the necessity of buying from **you.** We'll help.

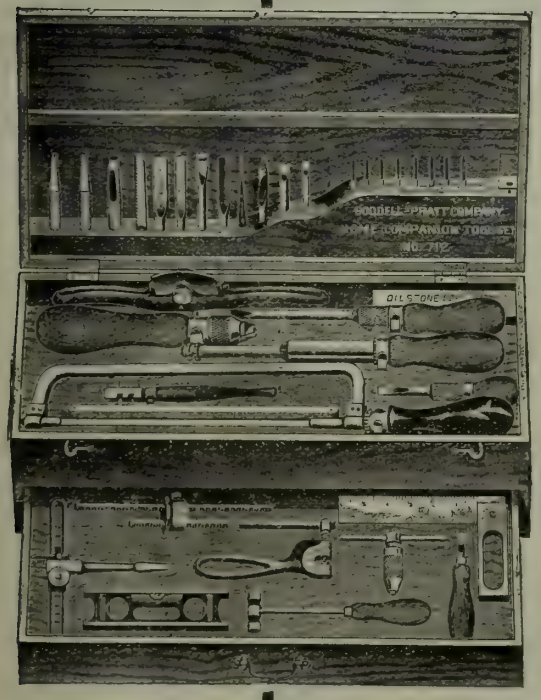
THE DISSTON SAW
A Triumph of Organized Skill

A writer in the October number of the Railroad Man's Magazine says :—

"Times have changed. In pioneer days we took the large-bore shotgun and bagged all sorts of game because it scattered, and we could not miss. Now, if we scatter, we are likely to get something we do not want, and muss up the sport besides.

The mechanic and artisan become skilled by one particular movement. A thousand bits of special work contributed to the aggregate produce a finished article that is the wonder of the world.

No one man can build it all. Every man gives the best of himself to a single one of the thousand parts. When assembled the product is the highest possible attainment of the human head and hand."



Had this been written to describe the reason for the superiority of the Disston Saw it could scarcely have come closer to the mark.

It is because of the superiority of each individual piece of workmanship that goes into a Disston Saw that "the product is a wonder of the world."

Some of the men whose efforts go toward establishing the highest known standard of efficiency have been with the Disston Works for many years. Others have been employed from time to time because of their special ability in certain departments.

Not one man—not primacy in the field—not alone the experience of three-fourths of a century—but ORGANIZATION-EFFICIENCY is the result of the leadership of Disston Saws, so consistently maintained.

New *Marlin* Model 27

The best selling Rifle brought out in years. It's the only gun in the world to fill the big demand for a pump action repeating rifle in .25.20 and .32-20 calibres.

.25-20 or .32-20—Pump Action

Here's a rifle especially adapted to your trade. Made in the popular .25-20 and .32-20 calibres, for black, low pressure smokeless and high velocity smokeless loads—guns of power and range, yet safe to use in settled districts. No other rifle of these calibres has the popular, quick handling pump action. It has the solid top and side ejection—the sign of a modern gun. All Model 27 rifles are take-down; all have Special Smokeless Steel Barrel; all have Rocky Mountain Rear Sight and Ivory Bead Front (the best set of sights ever regularly furnished on any repeater). For these exclusive features there is no extra charge.

Remember the **trombone action** and **Special Smokeless Steel Barrel** cannot be obtained in any other rifle of these calibres at any price; the **take-down** feature and **Ivory Bead Sight** are never furnished in other .25-20 and .32-20 repeaters except at an additional charge; the modern **Marlin solid top and side ejector** cannot be duplicated in any other make of .25-20 or .32-20 rifle.

Don't wait until your competitor sells **your** customers. **You** could sell a dozen of these rifles this season if you had them. Better order a few to-day from your jobber. They sell quickly and **there is a good profit for you.**

Write us for catalogs, price lists, circulars, etc., of Marlin repeating rifles and shotguns, Ideal re-loading tools, hand-cuffs, etc.

Drive Home Our GILLETTE Advertising!

THERE'S MONEY IN IT

Like ripened apples on a tree, GILLETTE business is waiting all around you.

Every day thousands of men (and women, too) are reading GILLETTE advertisements in the newspapers and magazines. Every day thousands of enthusiastic GILLETTE users are telling their friends the advantages of "the razor of to-day."

The natural result is that hundreds have made up their minds to buy a GILLETTE---some day.

But apples, even in the picking season, rarely drop into men's pockets or cellars. The man who gets them is the man who hustles out and picks them.

So the GILLETTE business, even when it's briskest---and that's from now till Christmas---goes only to the dealer who **drives home** and **clinches** our advertising---who makes his store the GILLETTE headquarters for his town.

He puts up the "GILLETTE Depot" Signs, trims GILLETTE window and counter displays. But he does more. He puts the skilled salesmanship of himself and his clerks behind the GILLETTE. At every opportunity they deftly draw attention to the fine points of the razor---to its convenience---its comfort---its splendid finish. They suggest the GILLETTE as a Christmas present, and many a puzzled shopper thanks them for the suggestion.

That's the kind of salesmanship which makes a store successful. The GILLETTE pays a good and protected profit---it delights the purchaser---and establishes a regular trade in blades.

How about your Christmas stock? If you haven't a good assortment **order at once** to insure delivery in time. Even now we are having to work overtime to keep up with orders.

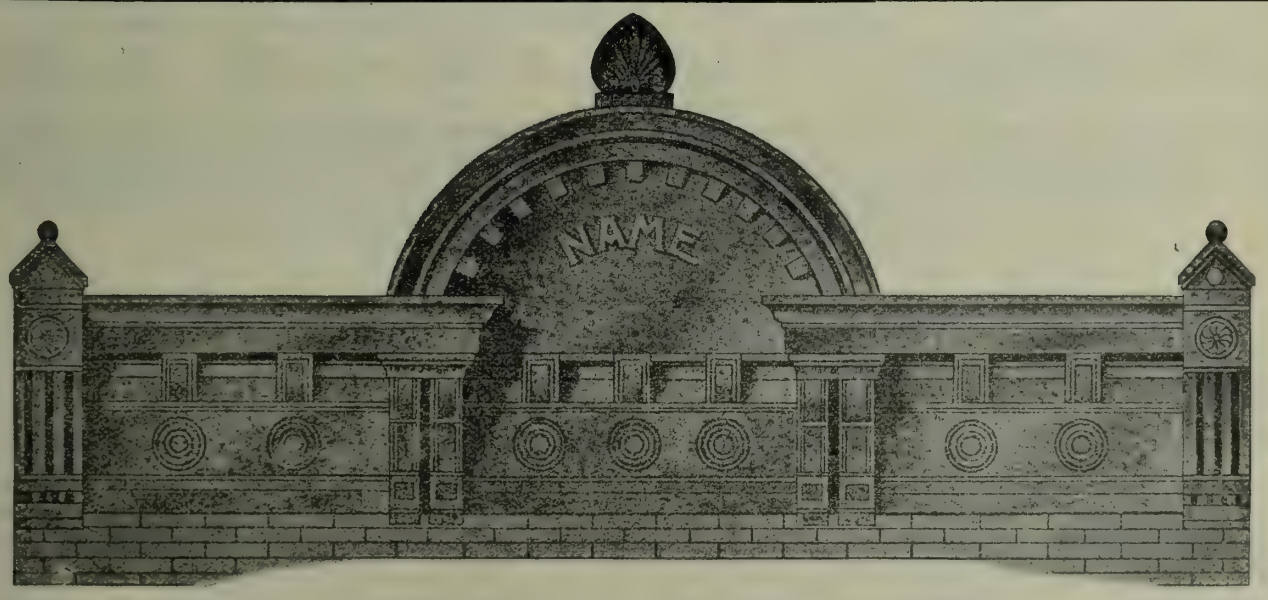
The Value of Quality

The modern understanding of the word QUALITY, according to the Standard Dictionary, is SUPERIORITY.

QUALITY also implies MERIT, GENUINE WORTH. It suggests INDIVIDUALITY. It embodies CLASS, and sets a STANDARD.

QUALITY in our goods is the result of the union of the BEST MATERIAL obtainable, the WIDEST EXPERIENCE, the LARGEST FACILITIES, and the MOST APPROVED METHODS.



The foregoing have placed us in the FRONT RANK as manufacturers of goods of STERLING MERIT.

Every dealer should insist that his jobber supplies the ST. MARYS HOCKEY STICK, because it looks well, sells well, and lasts well.

Just let us know, and we will supply you with circulars.

McClary's

London, Montreal, Toronto, Vancouver, St. John, Hamilton, Calgary Saskatoon.

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

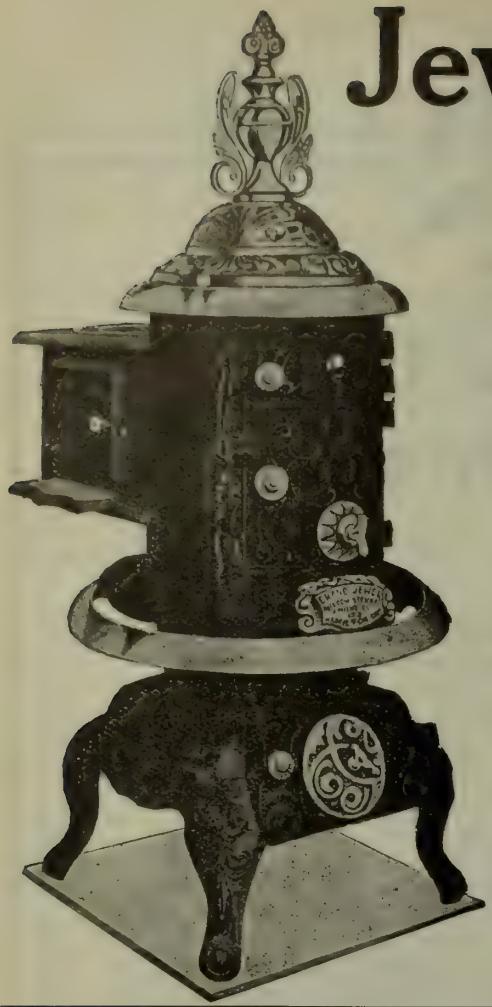
All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

How We Are Specialists

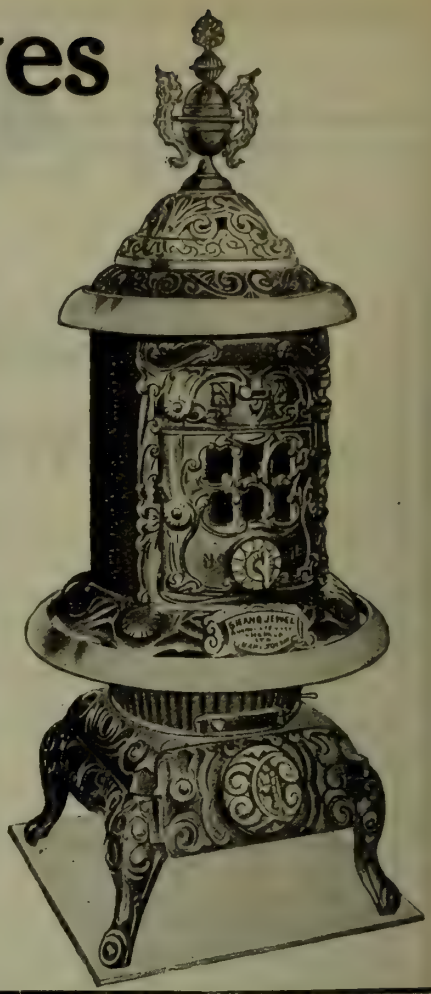
Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.



"Our Plan"



We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.

We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.

"CHAMPION" RANGE

Buying a range is not a game of chance if you buy a "CHAMPION" range with the "CHAMPION" GRATE. This grate with its non-warping bars operating in two sections is more easily shaken, more open, and therefore gives better satisfaction than any other grate. Quicker and better combustion is assured along with the "**pulling**" **quality**, economy.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, munufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

A Big Advertising Campaign for Preston Steel Ceilings is Now Running in Leading Papers

Large advertisements for Preston Steel Ceilings are now running in the leading Canadian papers. No doubt you have seen them, and admired their attractive appearance, and appreciated the forcefulness of their selling arguments. They are producing a strong impression on the public, and our agents are enjoying a greater demand.

It will pay you well to get in line and make a specialty of Preston Steel Ceilings. Each year a greater number are convinced of the wisdom of having beautiful and sanitary, durable and fire-proof ceilings of steel erected in their stores, offices, homes and public building. Each season the call for Preston Steel Ceilings grows stronger.

We've an instructive booklet and other interesting information you ought to have right now, so write us at once.

A Necessary Feature of Good Wire Cloth

is uniformity of mesh, and you'll find that

Greening's WIRE CLOTH

is absolutely uniform in mesh, because of the quality of the metal and the skill employed in weaving.

It is made from specially imported high-grade iron and steel rods, drawn in our own splendidly-equipped wire mill by expert wire-drawers. All Greening's Wire Cloth is made 'double crimped,' which ensures the greatest strength and uniformity of mesh. We make Wire Cloth of every description for every purpose.

Push Holiday Trade and Push it Hard

The Dealer Must Let His Community Know the Special Lines he is Carrying, and do This Well in Advance of the Buying—A Strong Co-operative Campaign Necessary—Continuity of Design in Window Display—The Store Must be Given a Christmas Spirit—The Use of Small Tables and Price Cards—The Children Must be Especially Catered For.

"How can I best develop my Christmas trade this year?" is the question which many merchant will be asking. It is one thing buying the stock of Christmas goods, and it is another thing to place them before the public in such a shape that not only are the articles being displayed to their full benefit, but also in a manner that will tempt the observers to purchase. In the first place, we come to the great principle of selling, and that is publicity. No matter how well selected a merchant's stock may be, or how excellent the quality, unless he tells his community that he is carrying these things he cannot get the results that he should be getting. People do not go prying around trying to find out what the hardware merchant has in his stock. One might display that desire in regard to an old curio shop, but not in a staple industry like hardware. It is, therefore, essential, to start with, that the merchant must let the district know that he is carrying a good selection of novelties and staples suitable for Christmas presents.

To do this, the merchant must not only advertise, but he must display. He must drill into the minds of the people sometime before the date of purchasing presents that he has the very things they want. He must excite their curiosity as to what he has in stock. He must set them thinking about his store as a place to visit when they are considering their Christmas purchasing, and he must give them a list of goods which not only offers a varied range of selection, but is also attractive from a utility point of view.

The Dealer Must Advertise.

Many people are even now ignorant of the fact that the hardware trade is catering more and more to the Christmas demand. It is, therefore, up to the merchant to start in at once to do away with that ignorance, and to prove by his Christmas campaign that he is eminently suitable as a medium for the purchase of Christmas presents. The merchant, then, must advertise, and advertise well, for Christmas trade; and he must do so, not when the people are thinking about buying their presents, for then they have in their minds selected the store, but he must get after them before the idea of Christmas presents his hardly been thought of, so that they are still unprejudiced as to the store to visit.

The merchant should either advertise in the local papers or issue circulars. A combination of both is most effective. These advertisements should not be stinted at all. They should contain talking arguments, as if the merchant was himself in conversation with the reader. They should convey the information that the dealer carries what is wanted, and that he has set himself out to cater especially for the trade, and that he is, therefore, the best medium for securing something useful, ornamental, or a combination of both, whichever is desired. Also, where it is possible, a merchant should show posters. A picture of Santa Claus, of a loaded Christmas tree, or of a young man giving a young woman a present, are excellent designs for attracting trade. With this advertising there should be strong co-operation through the windows. It is imperative that there should be complete alliance between the outside advertising and windows, just the same as there should be co-operation between the outside windows and interior. Bring the people to the store by the advertising and then maintain their interest by some good displays. Let it be understood that there is a general invitation for everybody to visit the store and look at the goods without any call upon them to purchase. Enter into the Christmas spirit, which is always prominent at these times, and let your store for the time being be considered as part and parcel of the shopping entertainment, provided by the allied industries of the community. Let your store be one of the attractions of the street. Let people know that they can feast their eyes and give enjoyment to their children without it being obligatory to purchase.

Exterior and Interior Display.

It is well to run a series of Christmas windows and let them have a continuity of design. If the merchant has the time and the inclination to go in for spectacular windows he has such a wide variety of designs that he can have no trouble in giving his inclinations full vent. Around Santa Claus a number of very fine designs can be easily produced. If owing to space or to various reasons, the merchant does not consider that it would be wise to have any spectacular windows, then he can, by good use of ordinary decorations, give the windows that spirit of Christmas and of good wishes towards everybody that are so essential at this time.

Then, again, the interior must be equally well looked after. We need not point out how great the mistake is to fail to let the interior back up any effort that is being done by a window and outside advertising. If the interior is destitute of any attempt at Christmas decoration; if it has a cold, cheerless look, it is entirely opposed to the feeling which reigns at Christmas time. A customer who is full of enthusiasm is chilled on entering the store, and with enthusiasm diminished probably leaves without buying anything. The interior decoration is most essential. The store must radiate with good-will and peace toward mankind, and should excite, rather than diminish, in any way, the feeling of pleasure that is so redolent at this time.

If possible, remove the stilted look that the hardware store usually has and create a bazaar appearance. That is to say, bring forward small tables and display the goods so that they can be inspected easily, and, if possible, open the store at nighttime, and if the district is large enough, have music to entertain the visitors. Have the goods ticketed so that a customer can find out for himself, or herself, as the case may be, what an article costs, without having to run after the clerk to find out.

Look After the Children.

Pay special attention to the children and excite their interest in every possible way. It must not be forgotten that children play a most important part at this time of the year. Through them the parents are brought into the store and the buying of a toy often means the buying of an expensive present for the husband or the brother. They sway more present-buying than many merchants possibly conceive, and it is essential if the dealer wishes to get best results of his campaign he must look to the children's end of it. A plan which is very often adopted is to have a live Santa Claus in the store. He can make himself generally friendly to the children, and he is also a good medium of giving away advertising circulars, or even a little present, which has very great influence in bringing the trade of the parents. The whole thing is to make every move in the campaign reflect the spirit of the occasion; to stimulate the enthusiasm, which is felt by everyone at this season of the year; and to make the buying but part and parcel of the Christmas festivities.

One Merchant's Campaign.

The campaign of a leading hardwareman across the border in developing Christmas business bears out our contentions. His best results have been obtained when his advertising was started early, as early as November 1, giving at that time, through the newspapers, an announcement that the stock of toys would arrive on a certain date. "On the arrival of the goods," he says, "we make a display, and at the same time inform the public that the goods are on exhibition in our window and in our store, open for their inspection. This window is left before the public three

days, and then taken out, putting in its place a display of the goods selling during the fall season. Twice a week until the first of December there will appear in the papers a list of the goods we have to offer. After the first of December the entire space in the papers is given over to the holiday goods, making the window displays and advertisements correspond with each other." He considers the window the best means of advertising, and uses it to the utmost.

There may be some trouble in getting people to look at your window, no matter how attractive it may be. In such a case something is necessary to draw the attention of such people. The use of music in some form or other is one way to overcome this. In some stores a small orchestra, in others a vocalist, and in still others a phonograph is used.

The Electrical Department at the Christmas Season

Good Time to Start an Electrical Department — Novelties, Specialties, Toys and Staples—Supplies for Power Users — Lighting, Heating, Cooking and Ventilating Appliances—Electricity in the Home—New Goods—Demonstrations and Window Displays.

A good time for the hardwareman to begin an electrical department, probably the best time of the year, is the season immediately preceding the Christmas holidays. There are then so many electrical specialties, novelties and staples brought before the public for holiday selling that the only requisite necessary for the hardwareman is good salesmanship to make these articles go.

They are lines, too, that fit in well with the ordinary run of hardware, and the hardwareman need not necessarilly be an expert electrician to make a success of his new department from the start, though a study of electricity will of course be helpful in enlarging the business later on.

The past two years have seen a veritable boom in trade connected with electricity, particularly in the line of installation work, supplies and general light and power wiring. There have been during this time also a vast number of new ideas, methods and invention brought before the public, and these are still changing.

At present there are on the market a great many appliances and devices for the use of electricity in lighting, heating, cooking and ventilating, and the handling of the necessary supplies for these alone should be productive of profitable business.

Electric Lamps for Homes.

Take the case of the incandescent lamp which has seen many changes of late from carbon to gem, to tantalum and tungsten. At first the tungsten lamp was recommended for store, office and factory, but this fall it is being pushed for use in the home. The majority of houses these days, especially the newer ones in the larger centres, are already wired, and the prospect for selling lamps alone seems inviting. There are, too, electric bells and a number of improved switches of the snap, flush and knife variety, as well as gas receptacles, dry batteries, wall and floor cases, fuses, motors, cleats, transformers, caps, sockets, plugs, condulets, etc., to make the adding of an electrical department well worth while considering by a hardwareman. These goods occupy but little space, readily lend themselves to window display, when carefully handled will not easily break, besides returning a good margin of profit.

So much for the lighting accessories, though a great deal could be said about electric fixtures and lamps, the season for which is but beginning. This year the variety of ceiling, wall and table lights in greater and more beautiful than ever—the newer lines running to arts and crafts designs, silk draperies and crystal glass fittings. These alone, while staples, look like goods suitable for Christmas giving.

In heating appliances there are an immense variety of articles being offered just now. The electric radiator of luminous type for mantel fireplace use of for heating bathrooms, bedrooms or libraries is more than a novelty. It has advantages in that it does not make dirt, smoke or odor, and is simple, safe and instantaneous, being always ready for the turn of a button. There are, too, the electric radiators of nonluminous type, made in a great many types and sizes, its special claims being that it saves current while warming the air the same as the glow radiators. The electric tubular air heaters designed in wall and floor types resemble closely the hot water and steam radiator though the construction is lighter.

As well there are electric heaters for carriages, for workshop and for office, made in somewhat different designs from the home heater. For the factory electric glue pots and wax melters are handy and convenient where energy is close by, and the different makes of soldering irons and solder melting pots give variety and should prove interesting to the hardwareman who has a plumbing or tinsmith department.

Devices for the Kitchen.

Probably no other department of electricity has shown greater development than has that devoted to the improvement of household appliances, and especially in efforts to make kitchen work easier and lighter. Nearly every one of these articles are small and can readily be handled by the hardware trade because similar articles are already classed as properly belonging to that trade. Take flatirons for instance. All hardwaremen sell these goods, but now and again a hardware merchant is met with who is afraid to tackle electric flatirons because he does not know much about electricity. Who does? How much does the hardwareman know about gas, or coal, or any of the other heating elements? He is not selling energy, but flatirons and should not care how they are heated.

The latest designs of electric irons are adapted in size and variety for a great number of uses from the three-pound iron for travelers' use to double that weight for home use and as heavy as 24 pounds for tailors' use. But besides flatirons there are food heaters and warmers, cooking plates, water heaters, combination cookers, tea kettles, coffee percolators, chafing dishes, toasters, frying pans, gridirons, disk stoves, corn poppers, broilers, ovens, and many other utensils, all of them much in line with similar articles handled by the hardware trade. Complete cooking and baking outfits are also made, which occupy the space of a small-sized table.

Nor have other comforts and conveniences been neglected, for there are foot warmers, cigar lighters, sealing-wax heaters, heating pads, hot water cups for shaving, electric hair dryers, etc. While improvements in all of these goods will no doubt be made in the future they have sufficiently passed the experimental stage to be classed as staples, and certainly should make an

Electric Batteries.

Another profitable side-line in the handling of electrical articles, especially such as have become household necessities, are flashlight goods. The Can-

Electric Pocket Flashlight.

adian Carbon Co., Toronto, manufacturers of flashlight batteries, say that in the past few years so improved is this class of goods that now they can be guaranteed for some time on the shelf. These flashlight batteries, consist of 1, 2, 3, 5 and 6 cells, every instrument which leaves their works being equipped with fresh cells, assuring long life and efficient service in the instrument.

The electric pocket flashlight which has been proven useful for emergencies of various kinds and under many conditions has almost become a household necessity as well. It is a safe and harmless light with which to examine gas leaks or tanks where an exposed flame is likely to cause an explosion. It is handy around an automobile, or about any engine when one has to find out the cause of trouble. It is useful also for watchman, policemen, soldiers, ship captains and in fact almost whereever light is used, in dangerous surroundings. The electric pocket flashlight may be thrown in a powder keg and it won't explode. It is made in various styles and sizes, the vest pocket size being convenient for

placing under the pillow to see the time without getting out of bed. It can be carried in the vest pocket, or in the travelling bag. These flashlights are made now with low voltage carbon lamps as well as tungsten lamps. The tungsten lamps give a much brighter light and take less current out of the battery. Of course they are somewhat higher in price but the price is within reach of nearly everybody. There is one main point which should interest the hardwareman and that is once he sells a flashlight battery he has a good trade in renewable batteries, and quite often renewable lamps, on which there is an assured profit.

These goods make quick turn-overs and they sell rapidly in the winter season. They have practically two seasons, one around Christmas and the other at camping and hunting time, when a flashlight is handy around the tent or in the woods

Light Gas by Electricity.

The new electrical gas and range lighter should prove a household necessity. It is clean, safe, inexpensive and so simple

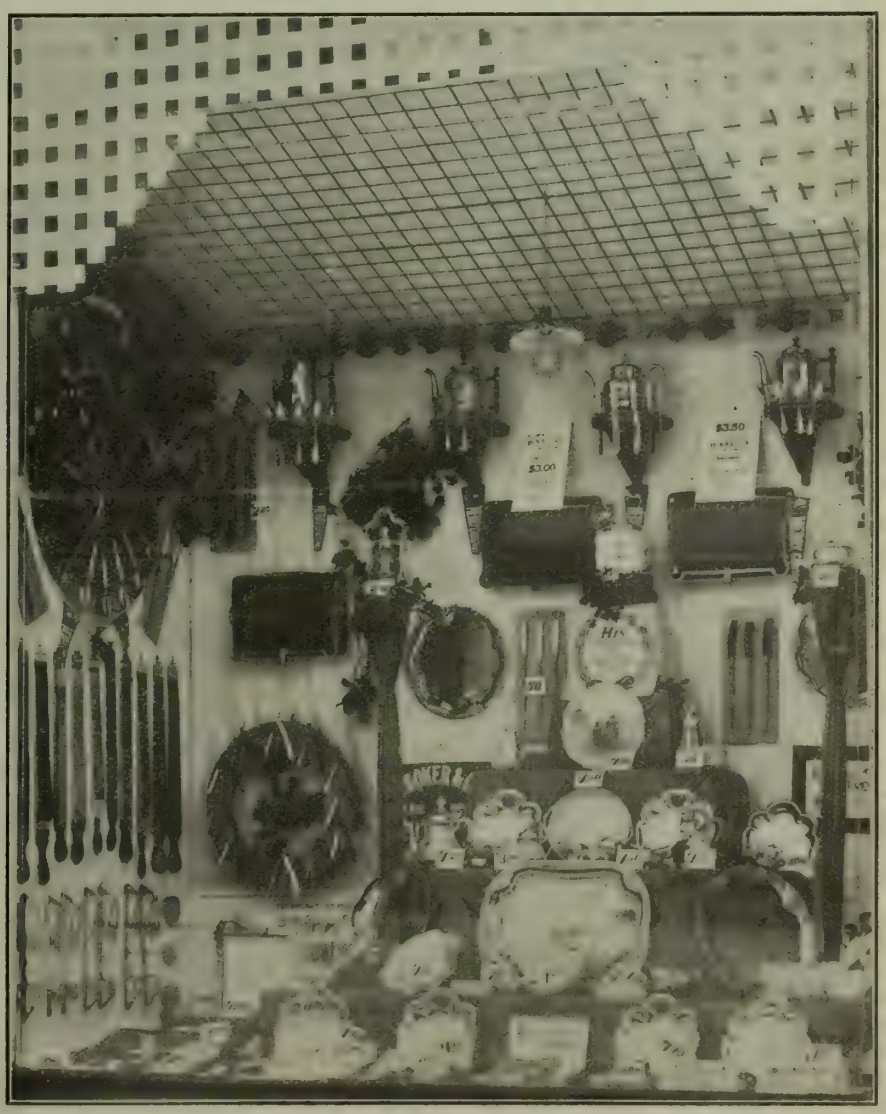
An Electrical Gas Lighter.

that a child can operate it. It keeps burnt matches off the carpet, there is absolutely no danger of setting anything on fire, and the touch of a button lights the gas instantly. They are recommended by the fire underwriters, will give from two to three months' service with ordinary usage before requiring a new battery, and the cost of the lighter is within the range of every householder. The margin of profit to be realized by the trade is said by the manufacturer to be exceptionally large.

So many and so varied an assortment of articles are offered at Christmas time that the buyer of presents does not know what to choose. In electric goods there is the advantage that all the articles are new, and if the hardwareman has an electrical department he can offer a choice of original, novel and at the same time useful presents that should appeal to the buyer. Gifts of this kind are out of the ordinary, and because of that fact there are greater chances of business being done than if some present of a more usual character is put forward.

Give Prominence to Electrical Stock.

Demonstrations of electric goods are a great help. Some hardwaremen argue that it is not worth the trouble, but this opinion is at least debatable. The merchant who takes trouble to attract business will get the custom; the other man doesn't count. At present electric goods in the hardware store are not too well known, and whatever pains are taken to give them prominence should result in building up a demand for such articles.



In the line of electric toys and presents for children the offerings are multitudinous. These articles prominently displayed will attract the young folk and the children will find some means of getting their parents or their elders to the store. Electric toys such as miniature trains and track, make a splendid window show, and a Christmassy effect can easily be made by the use of small sets of electric lamps for Christmas tree decoration. The window should be used for the display of these goods sufficiently in advance to let shoppers know the class of stock being carried. There can be no doubt at all about the show attracting attention from the shop-gazers. Let the Christmas electric window be the beginning of an educative campaign in the cause of electricity uses. The jobbing and supply houses will give the necessary co-operation.

FINE CHRISTMAS WINDOW.

One of the best Christmas windows shown in a small Canadian town last winter, judging by the photographs received by Hardware and Metal, was the one shown in the accompanying picture.

The window was well lighted and this helped to make the display attractive while the price cards on each article were the means of greatly increasing the volume of Christmas trade, in silverware, chinaware, and cutlery, by a great deal over that of former years, according to Mr. Ingram.

The background and end of window were covered with white cheesecloth, while the stands on background and the shelving on window bottom were covered with purple, making a good contrast against the white. To fill in the big vacancy at top of window a wooden lattice work was fastened. The top of window was white cheesecloth with narrow ribbon running each way, making a very pretty top. The flatware in the front of the window does not show to good advantage in the picture, but the display is one which can be repeated to advantage by other window trimmers.

Holiday Window Arranged Last Decem ber by P. Ingram for W. L. Parrish, Port Perry.

Successful Methods of Increasing the Sale of Stoves

Demonstrations Held by Three Western Hardwaremen — Leamington Merchant Sells Five Ranges as a Result of One Ad.—Comments on Display and Composition of Advertisements Appearing in Various Canadian Newspapers—An Ontario Hardwareman Advertising Hammocks in October.

Stove demonstrations have been used by many Canadian hardwaremen this fall to arouse interest in and increase the volume of stove business. Advertisements clipped from local papers in various parts of Canada feature demonstrations and special sales and results must have been exceedingly satisfactory as some of those conducting the demonstrations have been too busy to answer letters written to them regarding their experience.

The Rossburn Hardware Co., Rossburn, Man., sent an invitation card early in September to customers asking them to "meet the Malleable Man, who will show you his range, serve a dainty lunch and present you with a cook book and useful souvenir." Enclosed with the invitation was a four page circular, the first page of which is reproduced, a feature of this being the daily program, a special bargain being announced for each day. Monday it was preserving kettles for 60c; Tuesday, $3.50 table knives for $1.95; Wednesday, $1 enameled stove pot for 70 cents; Thursday, $1 Nevada tea spoons for 65 cents; Friday, $1 dish pan for 60 cents; and Saturday, $1.25 double roaster for 70 cents. In connection with the demonstration of the Malleable range a set of kitchen utensils was offered with each range sold, and there were also demonstrations of steam cookers and asbestos sad irons.

All of these announcements were featured very effectively on the first page of the circular, the printer having done his work exceedingly well. The second page was used to explain the Malleable steel range, the third to Jewel and Sunset ranges, second-hand cook stoves and revolving clothes reels, and the fourth to announcing a demonstration of Eldridge sewing machines and National kitchen cabinets.

The Saskatoon Hardware Company conducted a demonstration of the Sask-Alta range from Friday, Sept. 30 to Tuesday, Oct. 4, a seven inch four column ad. being used in the local papers to announce the event.

W. C. Stearman, Vancouver, conducted a demonstration of the Monarch Malleable range, at the New Westminster Exhibition, Oct. 4 to 8, a souvenir recipe program being distributed to visitors, and talks being made on cooking subjects daily by a domestic science graduate. In his announcement, Mr. Stearman said:

> During the days of the fair only we will give free with every MONARCH RANGE purchased, a set of kitchen necessities, consisting of a cleaver, meat saw, meat knife, bread knife, meat fork, emery steel, egg turner, can opener and paring knife. This set ordinarily sells for $2.50.
>
> There is no change in the retail price of the Range. This offer is simply made as an inducement to those who contemplate purchasing a range this fall to make their selection now. Leave your order for a MONARCH at our booth at the Fair-grounds. Delivery of the Range will be made at any time to suit your convenience.

Ad. Sold Five Ranges.

C. A. Willits & Co., Leamington, Ont., also took advantage of their local fair to feature a stove sale, using a three column space in their local paper the week before and during fair week. The ad. was well written, and neatly displayed. The large space taken made it possible to use large type and cuts, while also leaving space for an announcement of a special Saturday bargain. As a direct result of the ad. five ranges were sold, and the names of several good prospects secured. September was the largest month Willits & Co. have experienced since starting business.

In a small four inch double column ad.—a very popular space—Westman's Hardware, London, have made a very effective display. The cut is in proportion to the size of the ad., while some descriptive matter is given and prices are quoted.

Turnbull & Cutliffe's ad. in a Burford paper is an example of country newspaper typography of a decade or two ago, nearly every available font of type in the office having been used in the ad. Ten distinct styles of type are included. The adwriting is partly to blame, it being a series of generalties without any attempt to draw trade by featuring, describing

Second Annual Grand Demonstration Week

The week of Monday, September 19th, to September 24th will be our Second Annual Demonstration Week for the benefit of the housekeepers in this district. We are going to demonstrate the actual value of the many devices we have for saving them labor, time and worry and to make their work easier and more pleasant. We draw your attention to the

DEMONSTRATION OF MALLEABLE STEEL RANGES

KITCHEN ECONOMY

is not achieved by buying poor materials and cheap utensils to work with. True economy is in buying the best. You are practicing the right kind of economy when you get the Malleable range, the highest developed cooking device sold to day.

THE DEMONSTRATION

will be conducted by an expert from the factory where the "Malleable" is made. He will have a range in active operation and will show you how well and economically the Malleable could do your cooking from the finest pastry to the largest roast of meat.

DAILY BULLETIN

Monday

will be opening day. We will get acquainted with one another and we will show you the many labor-savers for the home.

Day's Special

PRESERVING KETTLE 60 cts, regular 90 cts. This is a high grade blue and white kettle holding twelve quarts.

Tuesday

All day—Serving corn cake baked in Malleable Range. Hot Coffee or Tea served with cake

Tuesday Bargain

TABLE KNIVES, a doz $1.05, sold regularly $3.50 a doz. This is strictly a first-class knife with steel blade and white celluloid handles.

Wednesday

Roasting Meat in Link Roaster in "The Malleable". Serving hot Coffee and Tea with hot biscuits.

OUR SPECIAL

GRAY ENAMEL STOVE POT, No. 9, 70 cts. Regular price $1.00.

SPECIAL Price

on

Kitchen Utensils

During the week of Demonstration we will offer each day one line of high grade utensil at the greatly reduced prices listed in daily bulletin column.

DAILY BULLETIN

Thursday

Demonstrating how the Malleable Range will cook food quicker on top of lids than can be done by ordinary stove with lids off.

Tea Spoon Special

One dozen Nevada Tea Spoons that sell regular for $1.00, our Thursday price 65c.

Friday

Demonstrating the even Baking qualities of "The Malleable" oven by baking pan full of Biscuits without having to alter the position of the pan.

Bargain Dish Pan

Our 17 qt. Heavy Anti-Rust Dish Pan on sale 60c, usual price $1.00.

Saturday

We will devote our attention to answering questions and reviewing the week's work. On Saturday, as well as every other day during Demonstration we will serve hot Coffee and Tea.

Double Roaster

This is the never burn Meat Roaster that sells regularly for $1.25, our special 70c

Of Interest to You

In addition to these demonstrations of The Malleable Steel Range we will be showing and demonstrating all the newest household devices. They include the National steam cooker, Asbestos sad irons and the newest and best in Silverware, Nickled ware, Cutlery, Etc.

FREE: With every Malleable Range sold during this week we will give away a valuable set of Kitchen Utensils FREE.

We want you to be here the First Day, for we're going to make it so interesting you'll be here every day.

Front Page of Circular Announcing Stove Demonstration.

Methods of Advertising Adopted by Canadian Hardwaremen.

and pricing any particular line. The offer of a premium to anyone failing to find what they want in the store, looks like "hot air," and is a waste of space.

Jas. N. McGregor's ad. is like Turnbull & Cutliffe's in that it mentions about a dozen lines carried, but something interesting is said about each line, and dividing rules are used to separate the various articles. The type is uniform also, there being only four series in the entire ad. If some particular article had been quoted as a special in each line featured, the ad. would have brought a good deal more trade to the store. Readers of papers nowadays look for prices and if they are not quoted they are suspicious of their being high.

George C. Ellicott's ad. lacks strength, and it would have been better to have taken another inch or two and told something about the heater, its price, and how it would repay the outlay many times over in comfort during the cool evenings during the fall and winter.

The same criticism applies to the Ottawa Hardware Company's ad., which shows a picture and quotes a price. Much better spend $3 for an ad, which will help sell goods than $2 for one which will merely excite curiosity.

The McMurty Hardware Company's ad. contains some interesting arguments, but its effectiveness is curtailed by its crowded appearance. A little white space around the talk would have made it stand out and attract more attention.

The "See our windows," and "Watch our ad." lines should have been placed between the heading and the body matter. Likewise the "Stoves repaired" line at the bottom is not displayed with good judgment.

McLellan & Company's four column-wide ad. could have been strengthened by the use of a stronger heading. "If it's hardware, we have it," or some similar phrase in smaller type, and "Harvest Supplies and Threshers' Necessities," in larger letters, would have made it stand out better. With the exception of the "Heating Stoves" line, all the type is of one series, all the lines featured being ones on which prices could not very well be quoted. The ad. has a good appearance.

Brace, McKay & Company's sporting goods announcement ought to bring a lot of business from their Prince Edward Island customers. Cuts, descriptive matter and prices combine to make it interesting, though some of the cuts are rather out of proportion. It is questionable, too, if it is wise to advertise "We undersell"—the point is made strong enough by the phrase—"The store that saves you money."

The Evely Sales Company, who have apparently secured control of Ling & Company's hardware stock at Lethbridge, have a "smart guy" as an ad.-writer, and Mr. Ling cannot relish any too much to have the smart fellow say: "Scuttles—I guess Ling thought nobody else handled coal scuttles, judging from the quantity he has." The story about the man being "too full for utterance" may excite a certain amount of interest, and bring some curious people to the store, but a red flag over the door and a boy swinging a dinner bell, would do as much.

The ad. is a poor one, and all good hardwaremen will hope to escape the necessity of attending their own funeral with the Evely Sales Company as funeral directors.

Not included in the cut with the reproductions, is an ad. clipped from an Ontario paper dated Oct. 6, which features screen doors and hammocks. Let us hope that no reader of this page is so careless with his advertising as to forget to change with the seasons. If he wants to get value for his money he will change every week. It will cost no more, and both merchant and publisher will secure better results.

WAGE A COLLECTING CAMPAIGN.

Now is the time when merchants should look to their outstanding accounts. The crops have been good, and from all sections of the country come reports of the freeness of money. Farmers are realizing on their grain, live stock, and fruits, and they ought to be in a good financial standing to meet their accounts.

There is no opportunity for anyone to raise the plea of hard times or money scarcity this autumn.

We do not live in an age when people need no reminder that they owe money for goods purchased, so that the merchant should make it a point to send out his accounts promptly, and if there is no immediate desire to settle, get after the delinquents, either by personal call or by letters. We know that the busy merchant has little time to attend to his accounts, and that if his customers only treated him fairly there would be no need to have to add to his work by collecting what is owing to him. But as it is necessary, then the only thing to do is to go after the money systematically.

The merchant should not let the idea that he may offend a customer affect his getting after his accounts promptly. The man who means to pay does not mind a gentle reminder that he is behind time with his money. He realizes that the merchant has to live, and when it is pointed out firmly but courteously that the money is wanted, then there is little fear that umbrage will be taken.

Collecting accounts is one of the most important parts of a credit business, and should receive the close attention of every dealer. The accounts should not be put off for a few spare moments, as is often done. They should receive first attention, for by them alone can he live.

The sending out of invoices, and the close scrutiny of the books, with a consequent close tab on those who are not settling, should be a regular part of the business system of a merchant. There should be no hesitation in getting after a long winded customer. Keep hammering and there are very few who will withstand the process for long.

A SUBTLE FORM OF DISHONESTY.

From time to time there is in evidence a peculiar form of dishonesty which is the more dangerous in that it does not involve an indictable offence. This particular breach of probity consists in accepting a salary for filling one position while surreptitiously using a part of the time which should be devoted to the interests of the one employer to do work for and receive payment from another.

A case in point is brought to mind by the newspaper notices respecting the firm of C. D. Sheldon. This man was accustomed to employ as stool-pigeons, men in responsible positions in various businesses, from government departmental employes in Ottawa, it is said, to men in financial institutions in various financial centres. It is entirely unnecessary to comment upon the ethics of the tempter. The serious question is with respect to the lack of business honor which permits a man to sell his whole time to an employer, accepting a substantial yearly salary for same and then to steal part of this time for the purpose of increasing his income.

Where a man can, without lessening his value to his employer, devote his evenings to extra work, one cannot take exception to this method. The point in question involves a form of dishonesty which is often practised by men whose integrity so far as actual cash or even finer points of honesty are concerned, is unexceptional. Cases of this sort come up more often than is generally realized and it is indeed time that steps were taken to protect an employer against petty and sometimes serious thefts of this sort, as against the more overt forms which involve the actual handling of cash. The government at Ottawa is endeavoring to prevent it, but the law is not yet of sufficient breadth to cover the ground.

A divided attention means lessened power of concentration and the opportunities of taking off a few minutes, or hours, of course increases with the responsibility of an employe's position. Should a man realize that by thus dividing his time and attention he is seriously lessening his earning power and consequently his value to his employer, selfish reasons alone would doubtless prevent much of such action.

A METAL IMPROVEMENT.

Not for a very long period have the primary metal markets looked so promising and encouraging as they do at the present time. It is true that the spectacular bulling movement in tin, which started in September, and has continued with a few breakaways until now, can hardly be said to lend much stability or encouragement for the future to the markets, but against this we have what appears to be a solid upward lift in copper, a long-continued strengthening in spelter, and a much more confident movement in lead.

Tin is such a creature of speculation; the London operators are so advantageously placed to corner supplies, that it is hardly necessary to consider the movement of this metal as any indication of what is really going on in the metal world. Every other metal can be at rock bottom and the consumptive demand at nil, and yet tin may be soaring up and up. But with the other and more staple metals it is different. These can be looked upon as offering some indication as to how the markets are situated so far as genuine consumption is concerned.

So far as copper is concerned, it looks as if the corner was being turned, at last, and that after months and months of depression, due primarily to overproduction, that a more confident feeling was being engendered. Following the statistics of the copper producers, which showed that stocks in the United States had been reduced for the month, comes the first authoritive statement that a curtailment of production has really been decided upon. There have been many rumors from time to time upon which have been hung speculative movements, but this is the first real statement, and it was made in London at a meeting of the Rio Tinto Company, the directors stating that not only their company, but United States producers, were co-operating with them in curtailing consumption. It cannot be wondered that a better feeling now prevails in New York, and that copper has gained a point or two. The firmer the markets the better the stimulation to buying. We have all along contended that copper only needs nursing to regain stability.

Spelter has long been steadily advancing, so that its present position is not unexpected, but lead has been so weak that it is quite surprising to see it over the £13 mark. It is reported that supplies are on the short side, and that with consumption good, stocks in ware-

houses are being depleted. This should mean stronger figures for some time.

It cannot be said that the iron and steel conditions, either in the States or in the Old Country, are showing such excellent improvement, but it must not be forgotten that in the first place they did not show such depression as the other metals. Trade in the Old Country is fairly good, although Cleveland warrants are fluctuating several points weekly. Iron and steel prospects in the States do not promise anything very encouraging in the near future. The steel business is dull, while new orders in iron can only be encouraged by the asking of prices for future contracts at present ruling figures. Still all the way round there is a very much better spirit, and this is largely the result of the improvement in copper, which shows the prominent place that this metal now takes in the commerce of the world.

AN INTERNATIONAL STEEL COMBINE.

The most important gathering of iron and steel magnates ever assembled together in America met in New York last week and organized the American Iron and Steel Institute, and from the presence at the meeting of representatives of the largest steel corporations of Great Britain, France and Germany, the deduction is made than an international understanding is aimed at which will mean a world combine and a division of the market between the various units in the agreement.

"Ethical questions," said Judge Gary, head of the United States Steel Corporation, at one of the meetings, "will have a place alongside economic and commercial ones." "If competitors," he added, "are in frequent communication and make full disclosures to each other in regard to their business, notifying one another of what they are doing, it will follow as a natural result that no one will take advantage of the information he thus receives to act unjustly or dishonorably toward his neighbor."

Stability of prices is undoubtedly aimed at by the members of the new Institute, not only in the United States, but in Canada, Europe and the entire world. Instead of endeavoring to encourage production in times of inactivity by reducing prices, the policy urged by Judge Gary, is that of curtailing the output, the same policy adopted by the United States Steel Corporation during and since the depression of a couple of years ago and which aided considerably in maintaining prices in the iron and steel market when other markets were at bottom figures.

To organize a corporation large enough to practically dominate the market in one country is, however, a vastly different thing from entering into an agreement or organization aiming at controlling the entire world's market. No matter how high minded or benevolent men may be it is a tremendous power to put into their hands to allow them to control the prices for one of the world's necessities. World corporations and world agreements will undoubtedly come, just as national and continental combinations have been arrived at, but governments must have something to say about regulating the powers of the corporations.

Business men generally would welcome any movement bringing about stability of prices providing the prices are reasonable. But if unreasonable prices are aimed at the very bigness of the combination would prove its downfall as the peoples of the countries affected would rise against the oppression of the international juggernaut.

The members of the Institute are now on a tour of the steel plants in Pennsylvania and Illinois and will assemble in New York again after interviewing President Taft at Washington on Nov. 1. Canada is represented on the committee, Mr. T. J. Drummond, of Montreal, being one of the directors.

Prizes for Window Display

Merchants in Small Towns Have Equal Opportunities With Window Trimmers in Large Towns and Cities—One Competition Closes Dec. 1 and the Second at New Years — Two Prizes Also Offered for Best Advertisement of Holiday Goods.

Announcement was made in Hardware and Metal last week of four prizes of $5 each, in cash, for the best photos of window displays sent to Hardware and Metal, the prizes being divided into two divisions, one open to merchants and clerks in Canadian towns and cities over 5,000 population, and the other to competitors in places smaller than 5,000. The Dominion Cartridge Co., Montreal, has offered to donate two additional prizes for the best sporting goods displays and the window competitions are now as follows:

Competition Ending Dec. 1.

Places over 5,000—$5 in cash is offered for the best window display of sporting goods, and $5 for the best display of lighting fixtures, cutlery, stoves and house furnishings, builders' hardware, mechanics' tools or other seasonable lines. Special harvest or Thanksgiving displays, in which grain or farm products are used to trim the window will also be admitted, but the trim must be be secondary to the goods shown.

Places under 5,000—Two prizes of $5 each under exactly similar conditions.

Competition Ending Jan. 1.

Places over 5,000—$5 in cash for the best window display of holiday gift goods, such as silverware, cutlery, shaving sets, cut glass, sporting goods, toys, lamps, tool cabinets, alarm clocks, watches, photographic supplies, or any other staple or special line sold in hardware stores.

Places under 5,000—$5 in cash for best window under exactly similar conditions.

Conditions Governing Contest.

Every photo which does not win a prize and is accepted for publication in Hardware and Metal, will be paid for by a year's subscription to Hardware & Metal or Busy Man's Magazine, each valued at $2, at the option of the sender.

In making the awards the editor of Hardware and Metal will be assisted by two experienced window trimmers of acknowledged ability: and attractiveness, selling ability and originality will be the main points considered. For instance, the attractiveness of a window will be judged by its power to draw the attention of passers-by, the selling ability of a window is increased by the use of price tickets, while originality consists in introducing new features aiding in making a display attractive in appearance.

All photos should be accompanied by a letter describing how the goods were arranged, the conditions under which the photo was taken, and the volume of sales resulting from the display.

Prizes for Best Holiday Ad.

Places over 5,000.—A prize of $5 is offered for the best newspaper advertisement featuring such holiday goods as cutlery, silverware, sporting goods, lamps, stoves, carpet sweepers, household goods or other lines usually sold in hardware stores. All that is necessary is to forward one or more clippings from your local paper with the name of the writer of the advertisement, and the name of the paper it was clipped from. Copies of booklets or circular letters used to push holiday trade will, however, be appreciated.

Photos and ads. should be postmarked not later than the date of closing the contest and addressed to

The Editor Hardware and Metal, 143-149 University Avenue, Toronto

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Montreal.

Tin—Advanced 1c.
Copper—Advanced ½c.
Spelter—½c. advance.

Toronto.

Linseed Oil—Advanced 3c.
Bristle Brushes—Advancing 10 p.c.
Sheet Zinc—Higher by 50c a cask.
Tin—Up 3c.
Spelter—Advanced 15c a hundred.

MONTREAL.

Oct. 21. There has been a very strong movement in all the metals due to increasing firmness in the primary markets, and locally tin, copper and spelter have been advanced. This combined with the good fall trading that has been experienced has produced a more confident tone all the way round, and conditions compared with three or four weeks back are much more assuring. Naturally with the increasing firmness in the markets inquiries have improved, and buyers are watching the markets closely. There is no doubt that if indications point to the fact that metals generally are billed for a continuance of stronger figures that trading will be stimulated. Buyers are working on very short stocks, and when figures commence to go against them consistently they will look ahead further than they have done. As it is an improvement has been noticed, and altogether fall trading has turned out very satisfactory. Copper has gone up ½c, tin 1c, and spelter 1-4. Consistent business has been noticed in imported iron, and delivery is being taken readily.

The bull operations have continued in London, helped by the cornering of spot supplies in New York. There is no doubt that the London bull operators have been supported by the impression that there will be a heavy fall and winter demand from America, while owing to the curtailment in the output of Straits Settlement tin due to the boom in rubber causing the mines to lack exploitation and workers, the world's visible supply is estimated as being 10 million pounds short of the total a year ago. During the week tin made a very big jump in London. Owing to producers' statistics showing that stocks have been considerably reduced, and the announcement that some of the large copper mines are without doubt reducing their output, a much better feeling has been produced in copper and New York advanced under the influence. This will do more good than anything else to improve the consumption. Spelter continues to show high figures in London, and there is an improved feeling in lead. There is nothing new that is encouraging about the iron and steel situation in the States. There seems to be no general feeling of improvement, although some plants report a better inquiry. The number of producing companies willing to accept business for the first quarter of the year without premium over the price for the last quarter of this year is increasing. The result is that more tonnage is being booked. There has been more activity in the lighter class of finished steel, but this has failed to offset the decrease in the heavier grades.

Pig Iron.—The situation is unchanged in imported iron. Deliveries are being taken promptly, and users are now loading up for the winter. But another month remains for the cheap freights. Canadian furnaces are doing fair business with prices well maintained considering all things. We quote No. 1, $18 to $18.50; No. 2, $17.50, at furnace Middlesboro; No. 3, $18; Summerlee, No. 1, $20.50; No. 2, $20; No. 3, $19.50. Prices in the States continue on the soft side and plants are taking next year's first quarter at prevailing prices. This has stimulated business.

Tin.—With the bulling operation in London unchecked local prices have had to respond, and figures this week have been advanced 1c, making jobbing prices now at 38c. Trade is showing a good fall movement, and it is not anticipated that new business will be affected by the advance as stocks are so short. There has been some marked fluctuations in London, and a big jump occurred during the week. New York has helped in the bulling operations by concentrating spot supplies, and if the tin plate making demand continues as at present, unless anything unforeseen happens, the operators in London will be able to maintain their position. There seems to have been severe interruption in mining in the Malay States owing to the recent great excitement over rubber. This has now, however, died a natural death, and the output should get back in its old basis.

Copper.—Following the better feeling reported last week, New York has shown higher figures and naturally local prices have followed. We note an advance of ½c, making jobbing figures around 14c. Trade is good and inquiries have been stimulated by the better feeling reported. The report that there is a private understanding among some of the large producing interests to reduce output naturally gave copper a stronger tone. A better consumption is noted, and altogether the prospects of copper look much brighter than they did.

Spelter.—As we anticipated spelter responding to stronger figures in London, has advanced locally 1-4c and jobbing prices are around 6 1-4c, with trade swinging in very steadily. St. Louis is not showing the activity that is being displayed in London, where the syndicate is holding spelter very strongly backed up by a good consumptive demand.

Lead.—Lead is unchanged this week, although the market is very firm under better reports from London and concessions are not so easy to obtain on good round lots. Arrivals in the Old Country have been on the light side, and the warehouses have been called upon more steadily than for some time past.

TORONTO.

Oct. 21.—The metal situation is improving, though it be but gradual. The healthier tone to the market in the United States is reflected on Ontario markets.

There is a prospect of good business ahead in Asia for British and general European metals next year, and that prospect alone has helped strengthen the world markets.

Tin has made another advance. The high costs in England coupled with small American supplies have boosted prices locally.

Lead is also firm, though unchanged. Zinc and spelter are running at higher figures. Charcoal tinplates are increasing in value.

Pig Iron—While business is still passing in small lots, orders are more numerous. Domestic furnaces and British irons are steadier in price at present than for some little time past. Quotations remain at the old figures, however.

No. 1 Canadian is $19.50 and $19 is asked for No. 2, f.o.b. furnace, with 50c a ton added for local delivery. Middlesboro No. 3, is $20. Summerlee No. 2, $22.50; Cleveland No. 1 and Clarence No. 3, $20.50 and $20.75 respectively. Jarrow is $20.50 and Glengarnock, $22.50.

Tin—Higher and still climbing prices are asked for tin. This week the local quotation is at 40c for hundred pound lots—3c advance over last week. Stocks are very light, not only locally, but throughout the continent. English prices are advancing pretty rapidly. Demand is fine.

Plates and Sheets—Charcoal tinplates are getting higher, and the advance promised last week has come. Bradley brights range from $6 to $8.50 per box, higher by almost a dollar than last spring's quotations. Charcoal tin boiler plates have also increased in value 25c a box, the present quotation being at $7. There is a very good demand for both sheets and plates. All kinds being decidedly active with stocks light. Canada plates are still scarce and running light. The high prices hold the market firmly. Deliveries of these goods are very slow and behindhand.

Copper—The market is active, with a buoyant feeling. The local quotation remains at 13½c. Both production and consumption are still running at high figures, but industries using copper as a basic metal are becoming more active with a consequent increase in demand. Buying is very steady, and concessions for good round lots not so easy to obtain. Inquiries show that a little more interest is being taken in the market. This is probably the result of the slightly

firmer tone in New York. The bulling in tin has tended to strengthen copper, while London in a speculative way has shown higher figures.

Spelter—The market is firming up. Indeed some houses have advanced spelter to $6.40. The lowest obtainable price this week for hundred pound lots is $6.25. Buying in anticipation of the advance helped some very satisfactory orders go through. Both the English and St. Louis markets are firmly held, and strong consumptive buying is reported. There is a very active market and an excellent tone. Concessions are not made very willingly for large lots. Trade is good, and sales satisfactory. The prospect is for firm prices on a steady market.

Lead—Strong with the market firming up is the situation in regard to lead just now. There is an active demand. The British markets show a firmer tone. This metal is now holding an excellent position on the market. Stocks are frequently changing hands. Lead is moving better now than for many moons past. The situation is entirely satisfactory. Domestic lead is at $3.75, with imported 5c. higher.

Old Materials—Actual business conditions remain as at last week, though there is a clearer and better prospect ahead due to the livelier feeling in new metals. Prices are unchanged, dealers still offering for old lines the following prices: Heavy copper and wire, 11 to 11½c; light copper and bottoms, 9¾; heavy red brass, 9½c to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½c; heavy lead, 2¾c; scrap zinc, 3½c; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6; old rubbers, 8½ to 9c.

HARDWARE MARKETS

MONTREAL.

Oct. 21.—A brisker tone to trade is noticed, merchants taking well assorted lots of purely fall and winter goods as well as general hardware. There is a general desire to get shipment as promptly as possible showing that the consumtive demand has set in well. Horse blankets, stall fixtures, snow shovels, weather strip, and heating accessories are prominent.

Cutlery, silverware, and glass lines are in greater request, and with delivery wanted promptly it is evident that merchants are preparing for a strong Thanksgiving campaign to be followed up with an equally effective one at Christmas. Guns have fallen off, but ammunition is still very active. Skates and hockey sticks are in good request. Lumbermen's supplies are getting more in demand as time goes on, while builders' hardware still maintains a prominent position. Railroad supplies are showing up well for this time of the year. Heavy hardware is not quite so active as it was. Altogether there is a very strong tone generally, and with prices firm, prospects for the fall trade movement are very inviting.

Seasonable Lines—Prompt delivery is being taken in snow shovels, weather strip, sleigh bells, and sleigh heaters. There is a good sorting up demand for blankets, stall fixtures, lanterns and lighting goods generally. Heating accessories such as coal hods, pokers, ash sifters, are showing an active call. General household lines continue prominent, with carpet sweepers, sad irons, food choppers and bread mixers well to the fore. There is a good tone to the markets, prices being firm.

Cutlery and Silverware—Orders in the various lines are improving every day, and dealers anticipate a good call for Thanksgiving and Christmas. General fancy lines in metal, and leather are in good request, besides the more staple lines such as carvers in cases, table cutlery, pocket knives, razors, shaving sets, pickle frames, and various glass dishes.

Sporting Goods—Guns continue to fall off in demand. Ammunition, however, is still very much in request. Skates and hockey sticks are now the prominent lines with snowshoes and toboggans increasing in demand. Gymnastic supplies continue to gain in popularity, also revolvers for indoor shooting.

Builders' Hardware—Builders' hardware still continues prominent, although a slight falling off, only to be expected, is noticed in the call from the country districts. The run on high class trimmings is still noticed, and makers are catering well to the demand. Prices are unchanged, and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Bolts and Nuts—The market is firm under a good demand. Repeat orders seem to show that stocks are still very light. We quote: Discount on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—The demand has fallen off somewhat in some of the lines, but bar iron and steel still maintain a good volume. The market is unchanged and we quote: Chain coil, ½, $5.25; ⅜, $3.80; ½ $3.50; ¼, $3.25; 1, $3.25; anchors 4½c. lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each.

Wire—There is a fair call for staple lines, with prices unchanged. We quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80; galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal; coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots; plain wire, bright, annealed and annealed and oiled, $2.35 base; staples, bright, $2.60; galvanized, $2.85.

TORONTO.

Oct. 20.—Trading continues in a spasmodic vein, though the passing week is showing better results than did the previous one. Late fall and early winter lines are moving satisfactorily, but the mild weather makes trade pass without the seasonable vim.

Sleighs, snow shovels, side walk scrapers, coal hods, garbage pails, wire door mats, etc., are the principal articles moving, with builders' hardware still prominent.

Booking for spring on general staple hardware lines is progressing, but orders are not as yet coming in in any great volume.

Prices hold steady on a firm and strong market. Brush prices have been advanced by manufacturers to jobbers about 10 p.c., and a like advance will be made to the trade on spring orders. The scarcity of good bristles is at the bottom of the enhanced values. Most of these bristles come from Russia and Germany, but for some reason or other supplies are low. China and Japan are also sources of supply, but the quality does not rank as high as European bristles.

Seasonable Goods.—Demand is running at present to late fall and early winter lines—wire mats, sleigh bells, weather strips, ice scrapers and snow shovels, garbage pails, etc., are the leading articles moving. Horse blankets, and stall fixtures are in good request for immediate delivery, as are all barn and stable goods.

Builders' Hardware—Business keeps steady, with perhaps a slight easing off. Building papers are in splendid demand. Metal shingles and sheets are in good demand with price pretty stiff. General city demand continues its steady gait, and orders are not only well assorted but well distributed. The market is firm. Nails and screws are selling well.

Household Goods.—Kitchen tin, granite and enamel ware, washing machines, mops, clothes baskets, wringers, etc., are the principal lines moving. Curtain poles, pins and table cutlery are increasing in sales.

Heating and Lighting Goods.—Lamp goods are prominent, and sales are increasing again, especially for holiday lines. Sales of gas and electric fixtures, are developing steadily with the Christmas season expected to show increased sales. Stoves and ranges are very busy at country points, city business running more to gas ranges and hot air furnaces, the latter of which are making business exceedingly brisk.

Sporting Goods.—Demand for guns, ammunition, cartridge belts, etc., while fairly steady shows signs of petering out with the end of the season in sight. Skates and hockey sticks are now being taken for early delivery. There is an improvement in gymnastic outfits. Prices

are steady. Some good sales have been made of better grades of pen and pocket knives and general cutlery lines are beginning to show more signs of life.

Heavy Hardware.—Bars, pipe, and rods are steady and active. Structural iron is exceptionally so. Factory repairs are keeping hardware stores busy with calls for rivets, bolts and nuts. There is a good tone all the way round. Orders are well assorted.

Wire.—General lines are in fair demand. The market is unchanged.

Christmas Goods.—Inquiry for holiday and presentation goods is showing signs of life and activity. Iron and tin toys are increasing their hold on the trade.

HARDWARE TRADE GOSSIP

Ontario.

Mervin Jameson, has accepted a position as salesman with the St. Marys Hardware Ltd.

Burglars entered the hardware store of R. Webber, at Dundas, Ont., on Oct. 18 and secured considerable loot.

Blanche, daughter of M. S. Madole, Napanee, was married on Wednesday, Oct. 19, to Owen S. Reddick, Cleveland, Ohio.

Louis F. Gates has been appointed sales representative for Western Ontario for the Gillette Safety Razor Company, of Canada, Montreal.

The front of Glover's hardware store at Aylmer is being torn out and will be replaced with pressed brick and up-to-date windows.

J. Moore, who ran a hardware store in Kirkton for a number of years, and who sold his business and moved to St. Marys, has again moved to Arthur to take up a new hardware business which he lately purchased.

Edward C. Dingman, of Dingman & McCombe, manufacturers' agents, Montreal, piloted A. Boentgen, of Boentgen & Sabin, makers of cutlery of Solingen, Germany, around the Toronto jobbing houses during the week.

W. R. Tait, city traveler for the Kennedy Hardware Co., Toronto, has purchased the hardware business of John W. Oram, 836 Yonge street, that city. Herbert Cruickshank, for the past four years with H. S. Howland, Sons & Co., is succeeding Mr. Tait. He will start out on his rounds on Monday next.

Quebec.

The Herman Young Co., wholesale and retail hardwaremen, Quebec, have been registered.

Lawrence Stephens, of the G. F. Stephens Co., Winnipeg, was in Montreal last week calling on the Canada Paint Co.

Lawrence T. Walls, of the Steel Co. of Canada, (Dominion Wire Mfg. Co. branch, Montreal) is on a business trip through Ontario, east of Toronto.

Geo. R. Nimmo, Napoleon Paradis, William D. Hamilton, L. N. Danserau, J. L. Danserau and W. J. Good, of the Canada Paint Co., Montreal, have been on a visit to headquarters posting themselves for their fall trips.

Western Canada.

Angus McLeod has sold his hardware store at Perdue, Sask., to E. H. Moffatt.

T. Rosmussen, hardwareman and implement dealer at Quill Lake, Sask., has sold his business to B. Welbank.

Ferris & Simms, hardwaremen at Rosebank, Man., have sold their business to Theodore Dennison.

Joseph Keeton, hardwareman and boot and shoe dealer, Pierson, Man., has given up business.

M. A. Boyd, hardware merchant at Lyleton, Man., is disposing of his stock and moving to Saskatchewan.

The Rollefson Bros. Co., Hanley, Sask., have sold their hardware business to E. J. Moore and D. M. Dilly.

Fire damaged the hardware store and stock of F. S. Heath at Tees, Alta.

The Western Foundry and Metal Co., Calgary, has been incorporated.

Smith & Gaetz's hardware store at Red Deer, Alta., was damaged by fire recently.

H. F. Pieper, hardware merchant, Sunnyslope, Alta., is erecting a large store.

G. B. Thompson, tinsmith, Claresholm, B.C., has moved to Vancouver.

Joe Perry has accepted a position at the hardware store of his brother, T. M. Perry, at Estevan, Sask.

J. Sutherland has sold his sheet metal works at Vernon, B.C., to the J. W. Glover Co.

WEST IN GOOD SHAPE.

Arch. MacFarlane, manufacturers' agent, has returned to Montreal after completing his annual trip through the west to Vancouver. He visited practically every important centre, but found no bad effects from the partial crop failures. Two points impressed him: the growing importance of Lethbridge as a business centre, and the development of the northern country—they are growing and grinding the best quality of hard wheat one thousand miles north of the U. S. boundary.

TENDERED COMPLIMENTARY DINNER.

A complimentary dinner was tendered A. E. Hanna, of the Dominion Wire Manufacturing Company branch of the Steel Company of Canada, at the Forest and Stream Club, Montreal, last week, by the wholesale hardware and metal trade, on the occasion of his being appointed Manager of the Northwest Sales covering Manitoba, Alberta and Saskatchewan, with headquarters in Winnipeg. William Starke, president of the Canadian Wholesale Hardware Association, presided, and he was supported in the vice-chair by W. H. Farrell, president of the Dominion Wire Mfg. Co., Montreal. The following were present: G. C. Davis, Frothingham & Workman; F. Ross Newman, Caverhill, Learmont & Co.; J. H. Hanson, Hanson-Tilley Co.; C. B. Rittenhouse and Geo. Childs, United States Steel Products Export Co; Robert Starke, Starke-Seybold; A. Jeannotte, L. H. Herbert & Co.; J. S. Parkes, Canada Screw Co.; Hiram L. Piper, the Hiram L. Piper Co.; Ross H. McMaster, Montreal Rolling Mills; G. C. Seybold, Starke-Seybold; and T. E. Peck, Peck Rolling Mills. Letters of regret for non-attendance were read from various other members of the trade.

The proceedings were very enthusiastic, and general regret was expressed that Mr. Hanna's appointment should be the means of severing an association of so many years. General tribute was paid to the business career of Mr. Hanna, who had been with the Dominion Wire Mfg. Co. for about 28 years, and who had worked up from office boy to the position of sec.-treasurer and sales manager. Good wishes were extended

A. E. HANNA, Montreal,
Appointed Manager Western Sales Office of Steel Company of Canada.

on all sides to Mr. Hanna for his future welfare, and hopes were expressed for his continued success in his new field. Mr. Hanna feelingly replied to the tributes of his friends, and, referring to his business connection with the trade in Montreal, expressed the hope that in his new sphere he would have the same pleasurable and satisfactory experience. Mr. Hanna expects to take up his duties next week.

The Steel Company of Canada, it will be remembered, consists of the Canada Bolt and Nut Company (comprising the Belleville Rolling Mills, Brantford Screw Co., Gananoque Bolt Co., the Toronto Bolt and Forging Co.) and the Canada Screw Co., the Dominion Wire Mfg. Co., Montreal, the Hamilton Steel and Iron Co., and the Montreal Rolling Mills.

Armouries at Peterboro Where Ontario Hardwaremen will Assemble next Februa ry.

Executive of Retail Assn. to Meet Thanksgiving Day

Preparations Well Underway For The Big Convention to be Held at Peterboro next February—Only a Few Spaces in the Exhibition Hall not yet Allotted—A Complaint from Sudbury.

The Executive Committee of the Ontario Retail Hardware and Stove Dealers' Association is to hold meetings in the parlors of the Queen's Hotel, Toronto, on the morning and afternoon of Monday, Oct. 31, Thanksgiving Day.

Committees are at work at Peterboro preparing for next February's convention and work will soon commence on the signs and decorations required for the Exhibition hall. A card is to be printed with a map of the business section of the city, showing the depots, hotels, armouries, collegiate institute, city hall, hardware stores and hardware factories and everything possible done to make the visiting hardwaremen comfortable during their stay.

At the meeting on Thanksgiving day, the details of the convention program will be decided upon, the arrangements for the exhibition completed and convention headquarters chosen. Some interesting features under consideration will also be discussed.

The exhibition is an assured success as already about 60 of the 70 spaces have been allotted. Several Peterboro hardware manufacturers have taken one end of the convention hall, about 80 feet in all, while several Galt manufacturers have reserved the opposite end for a "Made in Galt hardware exhibit." The Taylor-Forbes Company, Guelph, have taken 60 feet of space for an exhibit and definite word is expected during the coming week as to whether or not five Philadelphia firms will take up an option on a similar space. In addition to these special exhibits, 43 of the 51 booths in the body of the hall have been allotted to the following firms:

Metallic Roofing Co., Toronto; Steel Trough & Machine Company, Tweed; Boeckh Bros., Toronto; Cummer-Dowswell, Limited, Hamilton; International Varnish Company, Toronto; Canada Paint Company, Montreal; James Robertson Company, Toronto; Dunlop Tire & Rubber Goods Company, Toronto; D. Maxwell & Son, St. Mary's; Standard Paint Company, Montreal; Dover Manufacturing Company, Canal Dover, Ohio; Moffat Stove Company, Weston; Gendron Manufacturing Company, Toronto; Supreme Heating Company, Welland; Pittsburg Fence Company, Hamilton; Lewis Bros., Montreal; Clare Bros, Preston; Onward Manufacturing Company, Berlin; Gillette Safety Razor Company, Montreal; Lufkin Rule Company, Windsor; McClary Manufacturing Company, London; Ferro-Steel Company, Bridgeburg; D. Moore Company, Hamilton; Brantford Roofing Company, Brantford; Tobin Arms Manufacturing Company, Woodstock; Dominion Register Company, Toronto; Carborundum Company, Niagara Falls, N. Y.; Imperial Varnish & Color Company, Toronto; Oneida Community, Limited, Niagara Falls; S. F. Bowser & Co., Toronto; Northern Aluminum Company, Toronto; Brandram-Henderson, Limited, Montreal; Pinchin-Johnson Company, Toronto; Gutta Percha & Rubber Company, Toronto; Benj. Moore & Company, Toronto; Metal Shingle & Siding Company, Preston and F. W. Bird & Son, Hamilton.

It is expected that the remaining spaces will be allotted during the coming week and with practically all the available space taken up four months in advance of the convention the exhibition is certain to be an attraction worth going a long way to see, coupled, as it is, with a retailers' convention with many features of particular interest to merchants.

Wm. Magladery, Liskeard, has consented to act as chairman of the committee in charge of the Question Box discussion and this end of the program will be particularly strong at the Peterboro convention.

A window dressing competition has been suggested in Peterboro hardware store windows during the convention, an opportunity being given visiting merchants to see the window trimmers assembling their displays. This and any other suggestions forwarded to the secretary will be considered by the executive.

Sudbury Firm Makes Complaint.

Purvis Bros., Sudbury, have forwarded a complaint to the Ontario Retail Hardware Association, to the effect that on July 8, 1910, an order was placed with a traveler named Hamilton representing the Carolina Pine Products Company, for turpentine at 79 cents to be delivered by October. Delivery was not made, however, the company stating they had never received the order. Purvis Bros. refused to accept delivery at a price of 90 cents quoted on Sept. 27, preferring to pay over $1 to another firm.

LUXURY LATHER BRUSH.

A shaving brush made to give a facial massage while the lather is being rubbed in, prevent ingrowing beard, gradually strengthen the texture of the skin, banishing tenderness and giving cheeks a ruddy, healthy glow, is being offered to the trade by the Luxury Sales Company, Troy, N. Y., whose Canadian agent is Thomas Reid, 304 Eastern Townships Bank Bldg., Montreal.

The brush is made of the choicest French bristles, sterilized, blended with pure Badger hair in the proper proportions for long wear, elasticity and firmness. The bristles are vulcanized in hard rubber and are said not to shed. The other portion of the brush, a finger pad

The Luxury Lather Brush.

made of the best Para gum, is used for rubbing in the lather to prepare the face for the razor. There are 150 little, tapering, round, red, rubber fingers, sterilized and sanitary. They work into the beard, the tapering ends penetrating between the hairs. In this way the beard is softened way down to the roots, where the razor cuts.

The position of the handle is referred to as particularly convenient for holding and for avoiding contact with the lather. The position of the handle is also said to give perfect control of pressure. In addition to the comfort derived from the use of the brush the saving in the razor blade is a point not to be overlooked.

News and Methods of Canadian Hardwaremen

Successful Hardwareman Killed at London in Automobile Accident—Corn Competition at Lanark—Metal Roofing as Fire Protection—Sudbury Firm Issues Card for Sportsmen.

LONDON HARDWAREMAN KILLED.

London, Oct. 17.—Ex.-Ald. Robert Parsons, head of the "Parsons Fair," and Parsons hardware store here, and interested in 22 similar syndicate stores, at St. Marys, Owen Sound, Orillia, Sarnia, Brockville, and other places, died on Sunday morning as a result of injuries received in an automobile accident on Friday. With John A. Rose and John Webber, travelers for the Hobbs Hardware Company, Richard Errington and Ed. Young, employes in Parsons' stores, Mr. Parsons was coming into London from St. Marys on Friday night in his large touring car. When a quarter of a mile east of Crumlin the car turned turtle into a ditch, pinning Rose and Parsons underneath. Both were hurt and the rest shaken up. Doctors found Mr. Parsons had sustained a broken collarbone and internal injuries. The accident was caused by trying to turn out of the way of a farmer's rig.

Last week Mr. Parsons had been unusually busy getting his stock in shape as he was to have left for a two weeks' fishing and hunting trip with his brother, John Parsons, of Owen Sound. Besides his widow and daughter, Miss Effie, he is survived by four brothers, John, of Owen Sound; George, of Sarnia; Richard, of Detroit, and Harry, of Orillia, and one sister, Mrs. W. E. Braund, of Brockville. All his brothers are in the Parsons' Fair and Hardware Syndicate.

The deceased served in the city council last year being elected on the Conservative ticket. He imbued that body with life and action such as it had not felt in many years. He was aggressive and fearless, and did much to eliminate subserviency among public officials.

ANOTHER CORN COMPETITION.

Lanark, Ont., Oct. 18—Taylor Bros., Limited, who also have stores at Carleton Place and Almonte, and whose branch here is conducted by T. Lett Simpson, recently conducted a "long corn competition," in which they offered a prize of $10 in gold, the winning stalk being twelve feet and three quarters of an inch in height.

Speaking of the competition, Mr. Simpson said: "It was a decided success, the 35 entries received indicating the amount of interest manifested. It was as good advertising as we could have done also, as it is bringing business to us every day. We find that to get people talking about our store will eventually bring us business. We also conducted an exhibit at our local fall fair, and gave away 2,500 souvenirs that day at the booth. The exhibit consisted of Findlay Bros. & Co.'s Stoves and Ranges, a line of heaters, both coal and wood, among which were the Economy and Tortoise as leaders. We also showed washing machines, cattle stanchions, ruberoid roofing, folding baths, and Portland Cement. We secured good results from the exhibit."

METAL ROOFS AND FIRE PROTECTION.

Chatham, Oct. 18.—The lack of fire fighting facilities in the country districts is a strong argument in favor of the use of metallic siding and roofing, and of prepared roofing.

Hardwaremen who are pushing these lines can make good use of this argument. One local dealer keeps careful tab of the fires in his immediate district, and takes care to inform himself as to the part which metallic roofing has played in protecting neighboring buildings. As a result, he is able to cite a lot of convincing cases, and not infrequently follows up a fire by pushing the metallic roofing trade in the immediate vicinity, as a rule with telling results.

The fire protection argument is often found particularly strong with farmers whose property is located close to railway lines, possible danger from locomotive sparks being pretty nearly always apprehended by the farmer.

CARD FOR SPORTSMEN.

Sudbury, Oct. 18.—Purvis Bros., Limited, Sudbury, have gotten out an effective advertising card showing the open season for various kinds of game, deer, moose, duck, partridge, etc. They give a long list of the firearms and ammunition carried in stock, and quote prices on same. Then they say: "Why go elsewhere for Guns, Ammunition, etc., when by dealing with an established house you have the advantage of choosing from this assortment at a reasonable price? 'Our prices are always right.'"

LUMBERING TRADE POOR.

St. John, Oct. 19.—Work has been started on a new school building, the cost of which will be close to $49,000. It will be of brick and stone construction. Contracts were awarded to the following: J. E. Wilson & Co., steel, fire escapes, galvanized iron and metal ceilings, $5,115; R. E. Fitzgerald, plumbing, $3,715; J. H. Doody, heating and electric wiring, $2,979.

The present indications are that lumbering operations this year will be much curtailed. The reasons given are poor markets, as well as increased cost of labor and camp supplies.

William J. Henderson, merchant, Newcastle, has assigned to Sheriff O'Brien, of Northumberland county.

TOOK A FULL PAGE AD.

Huntsville, Oct. 17.—Having a lot of damaged goods on their hands as a result of a fire in their store last June, the Huntsville Hardware, Limited, successors to White Bros., took a whole page recently in the local paper, to close these goods out quickly. After featuring and describing some of the goods they had on sale, they said: "Don't miss this opportunity of getting what you need, at the prices we are offering. Come with the crowd and be convinced." The firm has carried a line of furniture, trunks, etc., since the business was established by White Bros., twenty years ago.

WINDOW DISPLAY OF ROOFING.

Gananoque, Oct. 18.—I. W. Bennett & Son, who have one of the finest store fronts in town, are progressive window trimmers, and the acompanying picture shows how they have treated prepared roofing, a very difficult line to display

Prepared Roofing Window Display.

attractively. A miniature house was featured as the centerpiece, with rolls of roofing on each side, and display cards in the background and upper portion of the window. Displayed at a seasonable time, the window ought to be very productive of results.

CLOCK TURNS OFF LIGHT.

Stratford, Oct. 17—The Barnsdale Trading Co. here have a device for automatically shutting off the electric current in their window lamps at a certain time.

It is an alarm clock fastened to the wall of the second story just above the window, and to which is fastened a wire connecting with the electric lamps in the window. By it the lights may be turned off at any hour of the night.

The Barnsdale Trading Co. place great faith in their windows as silent salesmen. They always have them neatly dressed, and therefore are anxious to show them at night as long as people pass by the store. This automatic system permits this, and at the same time does not necessitate the lamps burning all night long.

Stephens

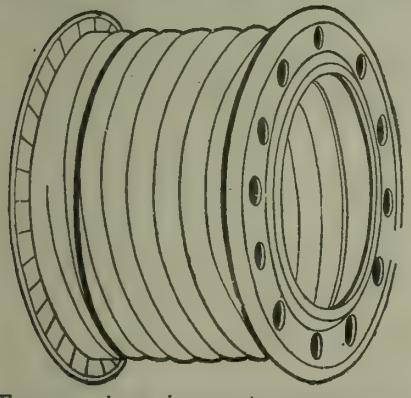
SHINGLE STAINS

Should be on the shelves of every dealer. No other shingle stain gives quite the charming effect of Stephens' and no other so effectually preserves the shingles from decay.

The genuine merit of Stephens' Shingle Stains is daily increasing the demand for them.

But we keep the output up to the demand.

We have the goods here waiting for you.



Send along your order. We will fill it at once.

Western Canada Hardware Market Situation

Our Western Correspondent Reviews the Market Outlook—Hardware Quotations Corrected By Telegraph From Hardware and Metal's Winnipeg Office up to Noon on Friday.

Winnipeg, Oct. 20—A very satisfactory trade is going on in a wide range of goods. The Fall trade from the standpoint of the wholesaler and merchant, is quite up to the mark. There is much optimism prevailing everywhere in the West, and business interests of every sort are active just now. All Western trade fluctuates, more or less, with the real estate conditions of the country, and as the real estate market is particularly active this week, the activity has been forwarded to all other business interests. Among the lines that might be mentioned this week that are having good sale are heating goods, sheet metals, winter sporting goods, tie chains, blankets and sleigh bells. Canada plate is strong, and further advances are expected.

Winnipeg Hardware Quotations.

Axe Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.80; p.g. oak, $2.75

Auger Bits—"Irwin" bits, 47½; other lines, 75 per cent

Bolts—Carriage, ⅝ and smaller, 65; 7-16 and larger, 55; machine, ⅝ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3½; small lots, 3; stove bolts, 77½.

Bar Iron — Bar iron, $2.50; Swedish iron, $4.75; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $13.

Blocks—Steel, 45; wood, 60 per cent.

Cut Nails—$3.10 per keg base; pressed spikes, $3.50 base, usual extras.

Copper—Planished copper, 30c per lb.; tinned, 24c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corugated iron, 28 gauge, $3.87; pressed standing seamed roofing, 28, painted. $2.83; galvanized. $3.87; 26, $3.24.

Canada Plates—Half polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.15; 8-inch, $4.40.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white 70 and 5; diamond, 50; grainte, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron — Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 26, $4.20; 28, $4.60; 30 gauge or 10¾-oz., $4.80; Queen's Head, 23, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Ware — Pails, 40 and 5 p.c. Other galvanized lines, 37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.65; No. 2 and larger, $4.65; steel, No. 0 to 1, $5; No. 2 and larger, $4.75; featherweight, $6.15.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50 and 5 p.c.

Hinges—Light T and strap, 65 p.c.

Hooks — Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 45 p.c.; smaller lots, 40 p.c.

Iron Pipe—Black, ¼-in., $2.45; ⅜-in., $2.75; ½-in., $3.30; ¾-in., $4.10; 1-in., $5.80; 1¼-in., $8; 1½-in., $9.50; 2-in., $12.70; 2½-in., $20.80; 3-in., $27.40; 3½-in., $34.20; 4-in., $39; 4½-in., $43.50; Galvanized, 1¼ in., $3.40; ⅜-in., $3.70; ½-in., $4; ¾-in., $5.25; 1-in., $7.60; 1¼ in., $10.35; 1½-in., $12.70; 2-in., $17.

Logging Chains—5-16, $6; ⅜, $5.50; 7-16, $1.70.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.25.

Poultry Netting—57½ per cent.

Pig Lead—$5. Lead Pipe—$6.

Rivets and Burrs—Iron rivets, 55 per cent. Copper, No. 8, 39c; 10, 32c; 12, 35c. Copper burrs, No. 7, 39c; 8, 40c; 13, 43c; 12, 46c. Copper rivets and burrs, No. 8, 31c; 10, 34c. Coppered, No. 8, 18c.

Rope—Sisal, 9½c; pure manila, 11; British manila, 9¾; lath yarn, 9½c.

Sheet Zinc—Casks, $7.75; broken lots, $8.50.

Steel Squares—45 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 5 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—22c per lb.

Screws—Flat head iron, 80, 10, 10 and 10; brass, 75; round head, iron, 80; brass, 70; coach, 67½ per cent.

Stove Pipes—6-in., $6.69; 7-in., $9.31.

Terne Plates—I.C. plates, $8.75.

Tin Plates—I.C., charcoal 20x28, full box, $9.25; ½-box, $4.87½; IX., full box, $11.25; ½-box, $5.87½; IXX., full box, $13.25; ½-box, $6.87½.

Tinware, Etc.—Pressed, retinned and plain, 75 and 2½; pieced, 30; japanned ware, 35.

Wire—Barbed Wire, 100 lbs., $3.05; plain twist, $3.40; staples, $3.00; annealed wire, $3 base; oiled, 10c extra; bright iron, $3.20 base; brass spring wire, 29c base; plain galvanized wire, 6, 7 and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

Wire Nails—$2.90 Winnipeg and $2.45 Fort William.

Wringers—Royal Canadian, $41; new easy, $45.25.

Paints and Oils.

Paints and Oils — The trade is keeping up well in all finishing paint and stains, and in lubricating oils. The mixed paint market is strong, but the output just now is not heavy, as work, especially exterior, is slack. Glass, putty and varnish are moving well.

Linseed Oil—No change in price or demand is noted, and there is little possibility of an immediate decline. Seed is very high, and raw oil continues at $1.15 and boiled at $1.18.

Putty and Glass — Everywhere the output is very heavy, and there is much glazing yet to be done before severe weather sets in. The $2.90 price is maintained on putty in barrels. The price in cases is $3.15, and in kegs, $3.40. Shipments of glass are very heavy.

Varnishes—The trade continues heavy in a wide range of finishings. It is believed that the trade will keep up well all winter.

Turpentine—The market is held firmly at $1.10 per gallon to-day. There is little possibility of an immediate advance.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 16c; Sunlight, 18½c; Family Safety, 23c; Searchlight, 21c; Red Rose, 25½c; Keystone Special, 18½c; Pemoline, in bulk, 19c; Silverlight, in bulk, 15c; Acme lamp, in bulk, 27c; White Rose, in bulk, 22½c; National Light, in bulk, 21c; Engine Gasolene, 24c; White Lily, 26c; Royal, 24c.

DEMAND FOR PEAT FUEL.

Ottawa, Oct. 19.—The experiment made by the Mines Department during the past month of placing on the local market 500 tons of peat manufactured into domestic fuel at the government experimental plant at Alfred, a few miles east of Ottawa, has proved a great success. The whole supply offered was sold within a few days at $3.25 a ton, and sin e then there has been a deluge of orders for further supplies. There is a general consensus of opinion among those who have used the new fuel that it is cheaper and more satisfactory than coal. The results of the first year's operation of the government plant at Alfred indicate that there is an immense field for commercial exploitation in developing the very large peat deposits scattered throughout central Canada.

The art of selling goods consists largely in making the goods look just as good as they are. In fact, past masters of the art of salesmanship have a genius of making goods look just a little better than they really are.

THE following message is the first of a series of letters that will be reproduced in Hardware and Metal. Each letter is characteristic of how dealers selling Sherwin-Williams Paints and Varnishes value our Agency Proposition.

Fredericton, N. B., August 11th, 1910.

The Sherwin-Williams Co.,
Montreal, Can.

Gentlemen: Replying to your inquiry as to our success in handling Sherwin-Williams Paint and what we think of the Sherwin-Williams proposition as a trade getter.

For years we have been handling SWP with the most satisfactory results to ourselves and our customers.

Your strong system of advertising has made the Sherwin-Williams line an easy seller and your personal letters to property owners, contractors and painters have been productive of the best results for your lines in particular, and our whole line of hardware and painters' supplies in general. This effective system of advertisement, coupled with the high quality of your products, has brought our paint and varnish department from a small to a large branch of our business (and it is still growing). We were among the first merchants in the Maritime Provinces to take up the Sherwin-Williams line, and we can state conclusively that the results accruing from year to year have confirmed us in our belief that yours is the best line on the market. We remain,

Yours truly,

Hardware and Metal Subscribers' Letter Box

Any Question on Trade Subjects Will be Answered by the Editor in This Department. Do You Want Any Address, Any Special Line of Goods, Anything Relating to the Hardware Trade? If Inquiry is of a Nature That the Correspondent Does Not Desire Publicity, he Can Use Initials or Nom de Plume.

Sized Burlap.

Karl Freeman, Bridgetown, N.S., asks where he can purchase sized burlap for covering walls, instead of wallpaper.

Editor's Note.—Stauntons Limited, Toronto, and Reg. N. Boxer Co., Toronto, are jobbers, and the Dominion Oilcloth Co., Montreal, and Smart Bag Co., Montreal, manufacturers. J. E. Garrett, New Glasgow, N.S., makes burlap, but not sized.

Lamp Chandeliers.

H. Sloan, Tilbury, Ont., writes: "Can you tell us where we can buy chandeliers suitable for country churches to hold oil lamps?"

Editor's Note.—The Rochester Lamp Co., 120 Church Street, Toronto, can supply these on special order.

Farm Tools.

F. A. Bacher, Chattanooga, Tenn., asks for the names of Canadian manufacturers of hay forks and rakes, not affiliated with the two American combinations.

Editor's Note.—Canada Steel Goods, Co., Hamilton; Bedford Manufacturing Co., Bedford, Que.; Erie Iron Works Co., St. Thomas, and Eureka Planter Co., Woodstock.

Brass and Copper Goods.

Smith & Gaetz, Red Deer, Alta., write: "We shall be extremely obliged if you will furnish us with the name and address of any firm in Canada who handle English makes of brass and copper goods, such as are handled in our business, and as we are in a hurry we shall be glad if you will use the enclosed stamped and addressed envelope for reply. We are pretty loyal to Canadian and English lines, but it takes a tremendous lot of hunting ground to locate them usually. We have been trying for about a year to get a well-known line of English razors, but have not been successful as yet. The manufacturers in England send us circulars and advise who their Canadian representative is. We write the party named asking for a small express shipment; he in turn states he cannot sell direct, but sends our order to some jobbing house to be filled, but by the time it gets there they have not the lines in stock and that is the last that is heard of the matter, the result being that we have to go back to German or American goods, for it is always easy to get them."

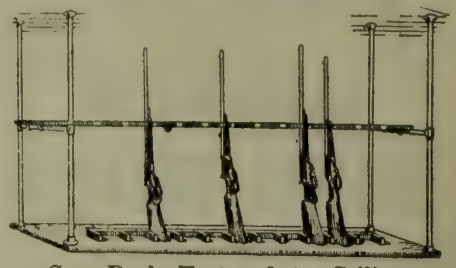
Editor's Note.—H. F. McIntosh, 28 Toronto Street, Toronto, specializes upon English copper and brass goods. Rice Lewis & Son, Toronto, also feature the line, while most hardware jobbers carry some lines in stock. May & Padmore, Birmingham, England, are represented in Toronto by Mr. Kirby, but we cannot give his address. McClelland Bros, 23 Scott Street, Toronto, represent the Associated British Factories, including Matthews & Timmings, Birmingham, England, who manufacture brass and copper goods, but, as Smith & Gaetz say, they make no effort to bring their goods before the Canadian trade through the trade press. Godfrey S. Pelton and the Canadian Sales Co., are two Montreal agents, representing English manufacturers of similar lines.

Percentage of Profit.

Editor Hardware and Metal,—I read with great interest your arguments on the percentage of the selling price. Although not asked for, allow me to tell you how I convinced a good merchant once. Supposing you hire all your help on a salary of 50 per cent. of their sales, and that you mark all your goods with that supposed 100 per cent, margin; that is to say, an article costing $1 to be sold at $2. All your sales of the day total up to $200. How much will you have to pay for the salary? $100. How much does the goods cost you? $100. Then nothing is left for you. Should you think the above is worth publishing after being revised in a business way, you are at liberty to do so.

I would like to hear what other readers of your paper think of the following idea to find out the average percentage of profit: Take all invoices as they come and mark on same the selling price of each item; total it up, carry same in the ledger, cost and selling price, and at the end of the year one would have a fair idea of his profits when he totals up his sales.

Wilfrid Bourque.



Sherbrooke, Que., Oct. 16.

Editor's Note.—The columns of Hardware and Metal are open to any reader to discuss the interesting point made by Mr. Bourque.

A DISPLAY GUN RACK.

Most gun racks in retail stores are placed against the wall, but sometimes every available space is needed, and a rack suspended from the ceiling, as shown in the accompanying illustration, will be found of value. The guns can be seen from either side and are within easy reach.

The rack is made of ½ inch iron pipe, which is cut in lengths suitable for the height of the ceiling. The upper lengths of the pipe are screwed into floor plates attached to a joist in the ceiling with screws turned through the plastering. These pipes are fitted with tees and a cross pipe. Four other lengths of pipe are turned into the bottom opening of the tees and their lower ends fitted with floor plates fastened with screws to a bottom board or shelf. Small stalls or divisions are nailed to the board in

Gun Rack Fastened to Ceiling.

which to place the gun stocks. A narrow notched board is fastened with clips to the cross pipes for supporting the gun barrels.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Wrenches and Punches. — Bemis & Call Hardware Tool Company, Springfield, Mass., have just issued catalogue and price list No. 20, dealing particularly with wrenches. Drive punches are, however, described on page 5, other pages being devoted particularly to nut wrenches, combination pipe and nut wrenches, adjustable nut and pipe wrenches, (single and double end), screw wrenches and wrench parts. Copies of the book can be had on request.

Bolt Machines.—Webster & Perks Tool Co., Springfiield, Ohio, have issued a catalogue devoted to bolt pointing, threading and special tapping machines, full descriptive matter, well illustrated being given of the various types and sizes.

Wire Goods.—E. Jenckes Manufacturing Co., Worcester, Mass., formerly of Pawtucket R. I., are supplying the trade with an elaborate 80 page catalogue of their bright and brass wire goods, including screw and cup hooks, spring cotters, flat spring keys, Hicks belt hooks, mill wire goods and miscellaneous hardware, many new lines being listed which were not in previous catalogues.

Philadelphia Made Hardware.—Five Philadelphia firms, North Bros. Manufacturing Company, Henry Disston & Sons, Enterprise Manufacturing Company, Fayette R. Plumb. Inc., and the Miller Lock Company, have combined in the publication of a monthly paper to be known as "Philadelphia Made Hardware," which will feature the products of these concerns and encourage hardwaremen to display and advertise them more effectively. Some practical suggestions are given regarding the sale of seasonable specialties, a study of which will repay any merchant or clerk. A prize of $25 is offered for the best window display of Philadelphia made hardware each month.

Securing Just Profits on all Goods Handled

Merchant of 28 Years' Standing, Maintains That the Dealer With the Independent Spirit is the Man Who Succeeds—It Pays, He Says, Not to Meet a Price Unreasonably Low—Advises Individual Dealers to Stand Up for Their Rights—Retailer Holds the Key of the Situation.

By Henry Jo hnson, Jr.

After one has studied the various problems I have outlined during the past few weeks, and has thereby learned where he is at, what he should have, etc., the proper question is: To what use shall we put this knowledge? Truly, it is one thing to know conditions and realize what we should get out of our business; but if we don't get it, how much better are we off? The old answer pretty nearly covers the ground—"Knowledge is Power."

Once you KNOW these things, a good start towards getting your just profits is made. If the salesman, or the jobber, or the manufacturer, comes to you with such a proposition you catch him. He said: "This costs you $1.50 per dozen and sells for 15 cents—TWENTY PER CENT PROFIT!" And, if you were in the well established habit of figuring on your costs, as you probably were, you took the statement at face value. You even went so far as to concede the freight as a "small matter." But today you can, by knowing a few things, decline to let the salesman talk on without interruption. You will, in fact, stop him in the middle of his talk to tell him you do not figure profits that way; that, on a cost of $1.50, and a selling price of 15 cents, you cannot figure more than 16 2-3 per cent. gross margin, even if the article be delivered to your door.

Dealers Not so Easy Now.

A few such arguments from every dealer the salesman visits will very soon send him home with the news that grocers are not so easy to figure with now as they used to be, and some change of policy is likely to result. Let that same thing happen to a number of distributors and a revolution will be well started. But remember that your talk must be backed up with your emphatic refusal to buy the goods that pay only 16 2-3 per cent., or your effort will come to naught. And if you say that you cannot hope to accomplish anything single handed my answer is that you can always and ever accomplish the denial of any space on YOUR shelves to any goods which do not pay an adequate profit.

* * * * *

A Spirit of Independence.

This ready acquiescence in conditions as we find them, is the one obstacle in the path of progress, the triviality of which it is most difficult to bring home to the average merchant. Each one feels that he "cannot do anything alone, and the rest of them will not do anything." O, the trouble of the "rest of them," each standing still to see what the others will do. Yet there are men in the grocery business who make big money out of it. There are, in fact, lots of such men. Yet each of those retailers has the same conditions of competition, lack of cooperation among his neighbors, the conspiracy of the distributors, etc., to contend with. Obviously, there must be something about those men which enables them to succeed where the majority practically fail. Yes, there is. They have the character to stick to the rule that, whatever may be the general conditions of trade or demand, they, so far as their individual business goes, will not stock a thing that does not pay a profit.

You might think such men would lose business, thus not having the articles in active demand by their customers. So they do lose a little trade. They lose the same kind of trade that you lose when you do not meet the builders' supply, or "Cheap John" cut price on nails. But it was long ago discovered that the man who tries to meet EVERY low price will have but a short business life, and so the most of us know better than to try to be in a position to throw price-inducement on every hand at the one time.

Dollars to Get Pennies.

Every man who declines to meet a price which is unreasonably low, loses trade; but the question is, does it pay him to lose it better than to keep it—and the answer is, that it most certainly does. For instance: You are getting eight cents for an article and you have a customer who declines to buy on the ground that Kaiser sells it at seven cents. You do not sell her, for she will go to Kaiser's before she will pay you the extra cent. Very well; you lose that sale and to that extent you "lose trade." But suppose you thought you had to meet Kaiser's price and lowered your figure to seven cents. You would then make the sale that now you have missed, but at the cost of one cent on each and every one of these articles you might sell. In other words you would be paying out dollars in order to take in pennies. And that is what the short sighted merchant does—he of whom we later read as having dropped by the wayside —"crushed out by the killing competition of the 'big department store,'" or some similar rot.

* * * * *

It is interesting to note some of the effects of an impression that has become general, such as I have suggested might be general if more retailers should, singly and alone, stand up for what is justly their

This is observable in general economic conditions all around us. Prior to 1907, prices steadily rose; every day we read of a limit "the highest yet," in this or that line of commodity. And with the rise in the "limit" there arose a sullen protest against conditions. One man grumbled to his neighbor, who maybe had not thought about things very much, and then the neighbor added his wail to the man's. Then each spoke to another, and there were four grumblers. Next day there were eight—then sixteen; and the numbers grew. It was all quiet, almost inarticulate. But the strong sentiment was there, and stayed there until the feeling penetrated "the seats of the mighty,"—and we know the result. "Lack of Confidence" and all that, meant universal protest on the part of the under dog.

This sort of thing is coming again. It is almost upon us now. The protest arises to "high heaven" that things are not evenly distributed, and that somebody is getting rich to fast. The protestors are "not organized," just the same as the retailers are not! but the feeling is becoming universal and in just a little while "something" will "happen" again.

Work as Individuals.

Let retailers learn what is right; what are their rights; what is good for them and what is fair to the other fellow; and then individually hold out for their own dues, and they will get all that is coming to them. It will be an example of the overwhelming weight of a kind of public opinion, which, as you know, even statesmen are bound to respect.

Picture to yourself this situation:

Let all the salesmen for all houses which have not shown a proper regard for retailers' rights go out on their daily mission one day, and be turned down cold by every merchant. Let their reception be about as usual —"Glad to see you, John," and all that — but when it gets down to the order, let the answer be, very quietly: "No; think I don't need anything to-day; can get along until next week all right." Let this continue throughout that day; and the next; and the next, for a week. Do you not think there would be somebody hustling around to see how the retailers migth be "placated?" Indeed there would be. And, moreover, he would come prepared to "eat crow."

* * * * *

And the foundation of all this kind of betterment is the individual retailer standing up, by himself, for his rights.

No. 31

DISPLAYING ADVERTISING MATTER.

How many merchants display to the best advantage the advertising matter with which they are supplied by the manufacturer. As much care is needed in the decoration of the interior as in the trimming of a window. It must not be forgotten that paint advertising matter, when hung carefully and with some attempt at harmonious effect, fulfills a twofold object—the advertising of the paint and the brightening up of the whole interior of the store. Very few manufacturers turn out hangers, posters, or whatever it may be that are not really artistic in themselves, and worthy to be displayed, even if they advertized nothing in particular. In fact some of the color schemes are worth framing and hanging up in the average parlor.

Besides, this matter is very attractive to the customers. The colors at once catch the eye, and a purchaser who probably only entered the store to buy a small article of hardware is led to look at a color scheme and eventually to become interested in the question of painting his house.

The great point in hanging advertising matter is to select the best locations. A survey of the interior should quickly tell the merchant these places. It must be remembered that the customer will not go around looking for the advertisements. Places must be selected that will readily command his attention, and best show off the particular form that the matter takes. A square card should not be placed where a long rectangular one would look better, and vice versa, while an advertisement of any particular combination of colors should not be placed where those colors will not harmonise with the general surroundings. The idea is to attract the attention of the customer, and to hold his attention afterwards. Therefore the more attractive the general arrangement, the better the chance of doing this.

Excite the admiration of a customer by the display of a well painted house, barn, floor, etc., and the work of the salesman is half done. Without these signs stories the salesman will have much harder work in many cases to convince a customer that his house is in need of paint. Advertising matter is thrown away unless it is well displayed.

There is one other point in the display of advertising matter and that is that care should be taken to have it up to date and appropriate to the season. Now that the merchant is working hard to push fall painting he must see that there is nothing displayed on his walls or counters that unmistakably refers to spring or summer painting. A lot of the matter is so arranged that there is no particular reference to the season, but in some designs undoubtedly the whole refer ence is to spring, and therefore the mer-

chant should be careful to take these down. If a customer sees a particular attractive hanger referring to the advantages of painting in the spring he will probably, being impressed with the hanger, decide to follow it out and wait for the spring.

Only show at this time pictures that refer to fall painting. Impress upon the observer that this is the only, and the best time to paint, and that the man who waits for the spring not only loses one of the best times to paint but that his house or whatever it may be is sure to suffer great injury by his deferring the job.

PAINT AND OIL MARKETS

MONTREAL.

October 21.—On the whole business conditions have been very good. Sorting up orders have come in steadily, while although the high prices on linseed and turpentine have conduced to very conservative buying, in these lines orders have been satisfactory, as with stocks light merchants have had to replenish them. A good consumptive demand is noted, and there is plenty of fall painting going on.

There is no change in prices. Linseed is still at old prices, but very firm. Turpentine is unchanged, but from advices received from the South it looks as if higher prices would obtain in the near future.

Turpentine—The market is unchanged from last week. Advices from Savannah report that figures are higher, and this will probably have a sympathetic effect upon the local markets. The demand is good. Buyers are apparently tired of waiting for lower figures which have not come and are purchasing more freely. We quote $1 to $1.02.

Linseed Oil.—No change is reported in the linseed oil situation of any great importance. The condition of high prices and scanty supplies, which has prevailed for so long still continues. There was a rapid jump in the English market, but prices fell away again, and local conditions remained unchanged. The demand is good under the circumstances, with holders not encouraging purchasing. We quote $1.08 for raw and $1.11 for boiled.

White Lead.—The market situation is unchanged. The dry article is higher in price and therefore an advance may come at any time in ground white lead. Buying is very good, and markets are much more together than they were. We quote $6 to $6.50 according to brand.

Varnishes and Japans.—Varnishes and japans are in good demand, and the bulk moving is reported to be satisfactory. There is a good household demand and varnishes in tins are rapidly getting very popular.

Putty.—There is a fair demand for putty. The market is firm, and we quote: 100-lb. drums, $2.60; bladders, in barrels, $2.85.

TORONTO.

Oct. 20.—A further advance has been made this week in linseed oil prices, quotations running higher than known in recent times. This is the only paint commodity which shows altered prices.

Trading is satisfactory, though more business could be handled were it offering. The continued fair weather should induce outdoor painting, and provoke business, but the high cost of oil and "turps" seem to have warded this off.

These higher prices have tended to bring substitutes to the front, one jobber averring that there must be ten barrels of substitutes moving to one barrel of pure linseed oil. It can be said, however, that some of these substitutes seem fair value for the money asked.

Linseed Oil. — Another advance has taken place in oil, the crushers on Monday last having sent up the price three cents per gallon, which has forced the jobbers also to advance their prices three cents. The English price for oil delivered in Toronto, say the jobbers, is so high that they are not at all likely to handle any. United States crushers are still buying all the flaxseed they can find on the market in Manitoba and Saskatchewan, so that Canadian crushers have no hope of securing any too much Canadian seed this year from which they can produce oil without a loss at any better figures than the present prices named. There is still a difference in some of the market quotations offering by various jobbers, the range running from $1.10 to $1.12 for single barrels of raw oil, and 3c higher per gallon for barrel lots of boiled linseed oil.

Turpentine—In regard to turpentine, the price remains stationary, and there does not appear to be any relief in sight. While the past month seems to have been favorable to the producing of the gum from the trees, the year's supply so far is very much below the quantity anticipated, and the stock now on hand is hardly one-half of what it was a year ago. Producers of turpentine have been pushing forward their supply as rapidly as possible, induced to do so by the high prices. Reports to-day from the South indicate that a serious storm of wind and rain has been raging in Florida and all Southern States, having just reached there from Cuba, where an extraordinary amount of damage has taken place. This will, no doubt, interfere with the gathering of gum and prevent the usual quantity of turpentine coming forward for the next week, and may make for another advance in the near future. The range of prices is narrowing locally, $1.02 and $1.03 being the figures asked for single barrels of "turps" this week.

Rosin—Conditions governing turpentine hold true of rosin. The market is stiff with trading fair. "G" rosin is at $3.25 per hundredweight, single barrels.

White Lead.—Steady trading is passing. Jobbers look for higher prices sometime next month. "Government stand-

SANI-FLAT

Are you handling "SANI-FLAT," the durable Oil Paint, that produces a dead flat finish, smooth and soft as velvet? Covers perfectly, is easy to apply, is sanitary and unfading, very durable and economical.

Made in white and 12 colors. A line that will prove a very popular one in your paint department. Send for color card and prices.

BENJAMIN MOORE & COMPANY

LIMITED

West Toronto

New York **Chicago** **Cleveland**

and" is at $5.65 per hundred for ton lots, and $5.90 for less quantities. Pure white lead is around $5.90 to $6 per hundred.

Red Lead—Sales are fair, considering the lateness of the season, though more business could easily be done. Quotations hold at $5.75 per hundred in casks, for genuine, and $4.25 for No. 1.

Putty—Splendid business has been done in putty this fall, and just now is steadily satisfactory. Prices hold firm. Bulk in barrels is at $2.20; in 100-lb. drums, $2.45; bladders in barrels, $2.70; in 100-lb. irons, $2.80; 25-lb. loose, $2.55; cased, $2.60; 12½ lbs; cased, $2.80. "Special" putty is 10 cents below these prices, and "pure" is 35 cents higher.

Glass—Trading is very good just now, and shipments are fairly heavy. Glass is one of the most active lines at present. The market is firm, but prices are considered low. The discount runs between 30 p.c. straight and 30 and 5 p.c.

Petroleum—Coal oil lines are steadily active, with prices stationary. Canadian prime white is 13c; American water white, 14½c; and Pratt's astral, 17c. Benzine and gasoline are pretty prominent in shipping orders.

PUSHING PAINTS.

A North Dakota firm writing to Iron Age Hardware on the question of pushing paints says:

I find that it pays to handle paints. I buy right, and that is the main thing about the paint business. I am located in a small town, so my sales do not run very high; still, I have to keep a fairly good stock in order to get the trade and do not figure on turning my paint stock more than twice a year. To illustrate the profits in this line of business I will give you prices in July.

High grade paints then cost, laid down here, $1.68 per gallon, and sold for $2, a very small margin where a person cannot sell a large quantity. By buying the paint last fall, which I did, at $1.35 and freight 13 cents, the paint cost me $1.48 a gallon, a very satisfactory profit.

I have been in this town only eight months, but do not think that I make it too strong in saying that I have increased paint business 150 per cent., mostly by keeping my stock well assorted and by advertising. Furnishing my jobbers with mailing lists and having them write my customers personal letters and send them circulars has proved very successful.

In painting season I always use a good size space in our local paper for paint exclusively, and at the same time have an attractive window display as I know how. When a customer comes into my store, I as a rule, find a way to call his attention to my lines of paint. Paint, more than anything else, must move in order to pay.

PAINT SALESMEN TESTED.

Several paint salesmen in the Chicago territory were recently placed in a trying and peculiar position. A purchasing agent called on several paint manufacturers for a sample gallon of paint. This he applied to suitable sizes of metal and submitted to tests very trying, one of which was the placing of these samples above the storage tank in the room in which they concentrated their sulphuric acid. The fumes from the acid combined with the live steam from the room soon showed results.

Later on the buyer called in the representatives of the various paint manufacturers from whom he had secured samples, presented them with the specimens tested, asking them to point out the first, second and third best. As there was nothing about the sample to indicate whose paint was used, and as their numbers varied for each manufacturer, the salesmen got no clew from the number as to whose paint he was passing upon. The salesman for Carbonall Metal Preservative, made by the Good Paint Co., Chicago, selected his paint three times out of five for first place and one time as second, and failed to list another time at all.

S. W. P. TRAVELERS' CONVENTION

The annual convention of the Sherwin-Williams Company's managers and traveling representatives from all parts of the world will be held at their Chicago works, October 24 to28 inclusive. Their meeting of general-managers and sales managers will be held prior to the general meeting, also at Chicago, on Friday and Saturday, October 21 and 22.

On Wednesday of this week, the managing director of the Canadian company, C. C. Ballantyne, left for Chicago, accompanied by R. C. Mission, Montreal sales manager, W. S. Fallis, Winnipeg sales manager, and L. W. Kelson, manager of the promoting department. The twenty-five Canadian traveling representatives will leave on Saturday night, to be on hand when the big convention opens on Monday morning, October 24.

Jos. R. Henderson, president and general manager of Brandram-Henderson, Ltd., Montreal, was in Toronto on Wednesday last.

Through an error in last week's issue of Hardware and Metal, reference was made that G. M. Edwards was general-manager of Brandram-Henderson, Ltd. This is an error as J. R. Henderson is the president and general-manager, Mr. Edwards being manager of the Montreal works.

In your advertising you should keep in mind that you have but one object to accomplish—to sell goods. An advertisement is a salesman. A salesman's ability is measured by the amount of goods he sells, and an advertisement's merit should be measured by the same standard. Advertising is salesmanship on paper.

General Instructions

in selling the

CANADA PAINT CO.'S PAINTS

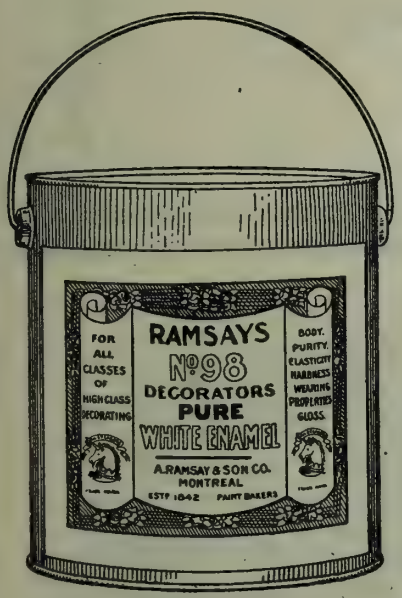
A number of salesmen in Hardware establishments are frequently at a loss in talking to a prospective buyer or in handing out a tin of Ready Mixed Paint, about the properties of the Paint and how it should be used. A few hints may be given, and if they are attended to and judiciously conveyed to the customer while the parcel is being done up, they will probably be appreciated, and will tend to show that the Salesman knows his business and takes an interest in his work.

The surface to be painted should be clean, dry and absolutely free from grease. All places showing sap and all knots must be shellacked. Do not grudge a little labor in preparing the surface; the operator will be well rewarded when the work is done. All Ready-to-Use Paint should be thoroughly stirred from the bottom of the tin, and if the surface to be painted is dry and porous the paint for first coat should be thinned by adding a little Raw Linseed Oil for outside purposes or a small quantity of Turpentine for inside work.

Never apply a second coat until the first is hard.

Paint not actually in use must be kept covered, otherwise it is liable to become "gummy" and unworkable.

Point out the necessity of keeping the brushes in good order. They must either be new or thoroughly cleared of old paint to do first-class work and avoid "streaks." Keep the "small boy" and the cat out of the way until the job is thoroughly dry.



Finally, see that each package of Paint and Varnish bears the name of the

CANADA PAINT Company, Limited

Decorators' Pure White Enamel

We are telling you about this Enamel, just so that you will know where to procure a high grade white, for high grade work, when you want it. Many Canadian dealers are paying exorbitant prices for an imported Enamel, because they do not know that right here in Canada is to be found an Enamel that outclasses any of the imported goods.

This is the sign—

If any dealer wants to see just what Ramsay's No. 98 is like, he can have a sample for the asking of it. A sample is all that is necessary to prove that Decorators' Enamel need not be imported into this country at high prices.

Would you like to have a sample?

WASH-DAY

loses half its terrors if the housewife is doing her washing with

CONNOR
BALL-BEARING
WASHER

the newest and best machine for washing clothes. The tub swings on ball-bearings, so arranged with springs that the washer **ALMOST RUNS ITSELF.** The boiling soap and water are forced through every thread and fibre of the clothes, cleaning them three times as quickly and much more effectively than by any other method. This machine has proved a ready seller and leaves a good margin of profit.

Amatite ROOFING

When a man is under the necessity of using a lot of roofing, he is pretty sure to study the subject with great care.

That is why Amatite is so often used on the big ready-roofing contracts.

A man who has only a few hundred feet of roof will often be careless in his choice of roofing, but when it comes to thousands of square feet Amatite is sure to be used.

The following is a typical instance:

Buy It—and You'll Never Need Roof Paint

Paterson Manufacturing Company.

Dear Sirs: We wish to inform you that the "Amatite" Roofing which we have used on our office, storehouse, lumber shed and barn has given most satisfactory service.

The area that these roofs cover is about 15,000 square feet. The roofing is unusually attractive in appearance, and in our judgment is the most durable and satisfactory made. The fact that it requires no painting appeals to us very strongly, and this feature makes it by far the cheapest ready roofing on the market.

CITY LUMBER & COAL COMPANY.
[Signed] F. B. Boardman, Treasurer.

The economy of Amatite is not only in its durability and its price (lower than any other mineral surfaced ready roofing on the market), but also in the fact that *it requires no painting.*

You may be sure it would cost something to paint their big roofs if they used a roofing that needed painting. All that is saved with Amatite.

A sample of Amatite will be sent you for inspection free if you will send name to the nearest Paterson office at once.

The Paterson Manufacturing Company, Ltd., Montreal, Vancouver, Toronto, St. John, N.B., Winnipeg, Halifax, N.S.

The "Made in Canada" Rifle

The plant in which the Ross Rifles are made in Quebec City represents an investment of over $100,000.00.

The Ross Sporting and the Ross Military Rifles are to-day unbeaten in their class and unequalled in their quality and value.

Dealers who take a pride in Canadian Manufacturers and prefer helping Canadian to foreign and at the same time sell goods of unequalled value can unhesitatingly stock a supply of Ross Rifles.

Index to Adervtisers—page 70-71.

The Trail of '98

THE MOST REALISTIC AND THRILLING CANADIAN SERIAL STORY EVER PUBLISHED

has been secured for Busy Man's Magazine, and commences with the November Number. It is from the pen of

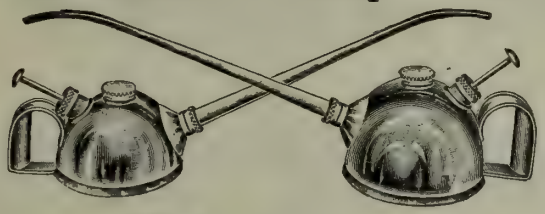
ROBERT W. SERVICE

The Canadian Kipling, of whose Books
"The Songs of a Sourdough" and "Ballads of a Cheechako,"
over 100,000 copies have been sold.

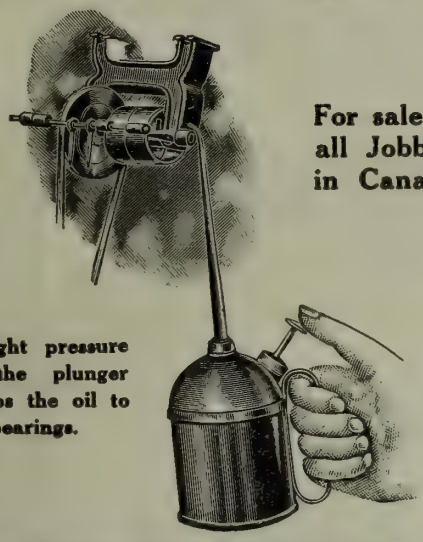
Service at one time was an obscure bank clerk in a remote corner of Canada. To-day his name is on the lips of seventy-five per cent. of the population of the Dominion, as a result of his two poems "Songs of a Sourdough" and "Ballads of a Cheechacko."

In The Trail of '98, Service drops the limitations of the poet for the time being, and tells of one of the romances of the rush to the Yukon in '98. With a bold, free pen, yet with all the skill of the poet, he unfolds his story, every line of which conveys to the reader that dramatic interest which is continually expected.

It is not a problem Novel. It has nothing to do with abstruse speculation. In its virility it seems primarily a man's book, yet it cannot fail to interest the woman who likes to hear of strong, brave men and fair women in a rugged land.



The Trail of '98 commences with the November issue. For the coming winter nights the Busy Man's reader will have in this intensely interesting story a wonderful source of refreshing entertainment.



Have your subscription commence with the November Number. Mail $2 to-day and your name will be entered on our subscription list for one year.

THE DISSTON SAW
A Triumph of Organized Skill

A writer in the October number of the Railroad Man's Magazine says:—

"Times have changed. In pioneer days we took the large-bore shotgun and bagged all sorts of game because it scattered, and we could not miss. Now, if we scatter, we are likely to get something we do not want, and muss up the sport besides.

The mechanic and artisan become skilled by one particular movement. A thousand bits of special work contributed to the aggregate produce a finished article that is the wonder of the world.

No one man can build it all. Every man gives the best of himself to a single one of the thousand parts. When assembled the product is the highest possible attainment of the human head and hand."

Had this been written to describe the reason for the superiority of the Disston Saw it could scarcely have come closer to the mark.

It is because of the superiority of each individual piece of workmanship that goes into a Disston Saw that "the product is a wonder of the world."

Some of the men whose efforts go toward establishing the highest known standard of efficiency have been with the Disston Works for many years. Others have been employed from time to time because of their special ability in certain departments.

Not one man—not primacy in the field—not alone the experience of three-fourths of a century—but ORGANIZATION-EFFICIENCY is the result of the leadership of Disston Saws, so consistently maintained.

THE MAPLE LEAF
"IMPROVED RACER"

CROSSCUT SAW

This saw is different in its construction to other crosscut saws, being made with the slanting gullets, which discharge the saw-dust more freely and allows every tooth to cut fresh timber. It is a perfectly true tapered saw, being ground 4 gauges thinner on back than tooth. This allows saw to run free and easy with very little set.

The trade-mark "MAPLE LEAF" is a guarantee of quality, and every saw is thoroughly tested and examined before leaving our factory.

Monarch
MALLEABLE
The "Stay Satisfactory" Range

A Perfect Range Would Be Built With Malleable Iron

By using Malleable Iron in preference to cast iron in building MONARCH Ranges, we have obtained two advantages. First:—The toughness of the metal permits a construction that gives a better service to the user. Second:—The same feature prevents breakage in shipping and in use. Malleable iron is unbreakable and can be worked cold under the hammer—that's how we can make such a firm construction.

The Malleable Iron frames on the MONARCH are jointed to the steel body with rivets or malleable lugs. This connection is solid and permanent. If we used cast iron it would be necessary to make the joints with stove bolts and caulk them with stove putty, which at best makes only a temporary connection. With the constant expansion and contraction of the iron, the stove putty loosens and falls out, thereby creating air leaks into the flues, which lessens the efficiency of the range.

The MONARCH oven is held in L-shaped Malleable Iron frames. With this riveted construction the joints of the oven to the steel body are practically air-tight and so rigid that they cannot open up, even after years of service. It is impossible for "air leaks" through joints like these.

The top frame being of Malleable Iron, is drawn down into the top of the steel body under pressure and riveted into place. There is no stove putty used in this joint—it is tight without it.

By making the plates and covers of Malleable Iron they will not crack or break, even when made of less thickness than those of cast iron. Nor will they warp with even three times the service that would ordinarily ruin cast iron.

All doors and door frames are of Malleable Iron. We use Malleable Iron in the MONARCH Range only where it will increase its actual value to the dealer and to the user of the Range.

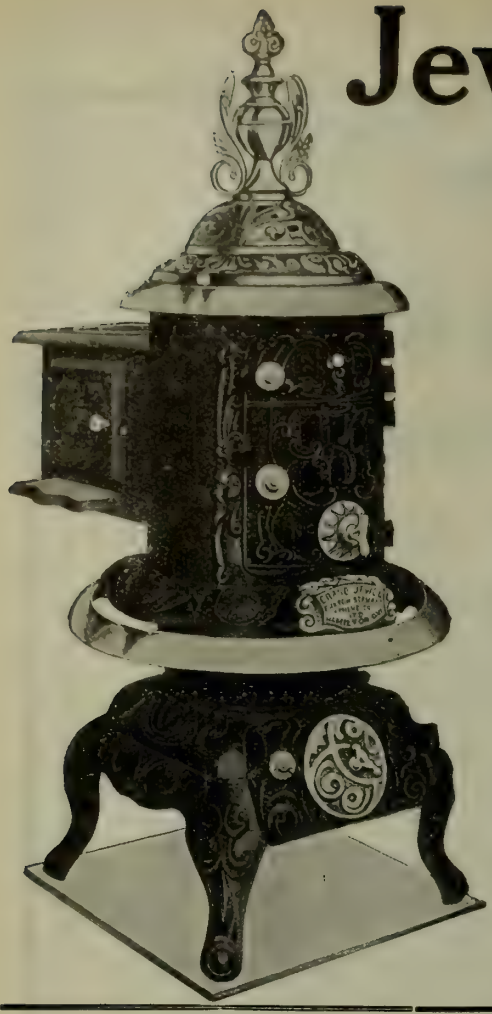
How We Are Specialists

Instead of making all varieties of cook stoves, cast and steel ranges of different patterns, heating stoves and furnaces, our entire organization and equipment is employed wholly in making MONARCH Malleable Ranges.

There is but one quality, and as the operations in making all sizes of MONARCH Ranges are identical, every workman becomes an expert in the line of work he performs. By this specializing we can give you the MONARCH Range at practically the same price that you pay for a cast iron range that might be classed as a first-quality-article in its line.

A proper retail price can be maintained on MONARCH Ranges, for our specializing is to your advantage when you show how the range is made and why Malleable Iron is used.

"Our Plan"



We offer you an assistance in selling MONARCH Ranges by working directly with your customers. Not by simply mailing a few disconnected circular letters to a promiscuous list, but by a good application of salesmanship on parties who have given some indications of being in the market for a range, thus making sales you otherwise would not get. We originated this plan of assistance several years ago. It has been copied by other manufacturers, but never successfully, for it can apply only to MONARCH Ranges—a line of one quality throughout—from which our selling arguments are taken.

We have plenty of evidence to support every claim set forth here and we ask any dealer who will concede that there is a possibility for his trade in ranges to be improved, to write us for our catalogue, prices and full information regarding "OUR PLAN" of assistance.
MONARCH Ranges are now delivered from warehouse stock at Winnipeg with prices quoted F.O.B. that point.

How many Preston Steel Ceilings have you erected in your locality this season?

Many hardware dealers have added a large increase to their steel ceiling business this year. They have given it a little more time and energy, and have been well rewarded.

How many Preston Steel Ceilings have you erected in your locality this season? If you are satisfied with your sales, well and good, but if you are out for more business now is the time to do some energetic work.

Our big advertising campaign in the leading papers is in full swing. The advertisements are large, attractive and forceful. They are educating the public to the advantages of erecting artistic, fire-proof, sanitary and lasting ceilings of steel.

By taking advantage of this advertising campaign---by doing some "team" work--- our agents and ourselves can produce results whereby all will profit. Write us right now for full particulars. There's money for you in our proposition.

Wholesale Hardwaremen Meet at Twelfth Dinner

Canada Club, Montreal, Scene of Convivial Gathering—The Reciprocity Question Principal Theme—The Good Work of the Association—The Young Man's Opportunity.

The question of reciprocity with the United States was the most prominent feature at the dinner held at the Canada Club, Montreal, on Wednesday night, in connection with the 12th annual convention of the Canadian Wholesale Hardware Association. Probably the subject came as a relief to those who had been sitting all day in private session discussing more local matters of trade interest. The presence of prominent members of the Steel Company of Canada had given the association an opportunity of discussing the relationship of the merger to the trade. The convention was a fully representative one, and extended into two days.

There was a large muster at the dinner, only a few who had signified their acceptance of the invitation of the association failing to attend. The room was prettily decorated, and the enthusiasm and genial flow of wit, prompted by W. Starke, the retiring president, and seconded by John M. Taylor, made the evening pass most quickly. Musical honors were accorded every speaker and any other non-speaker who happened to catch the speaker's eye.

After the health of the King, the chairman proposed the toast of the Guests. R. Hobson, Steel Company of Canada, Hamilton, was the first to respond, expressing his pleasure at being invited, and following this by stating that the Steel Company of Canada intended to work in complete harmony with the trade. They were forced into combination through the need of specialization, and the high rate of labor. They did not want to see their workmen situated as many are in the older countries of Europe, working in poverty and distress. They were going to improve their products, and add to their efficiency through the steps that had been taken. Above all, they were going to play fair.

H. R. Ives, Montreal, was in a reminiscent mood, and said how pleased he was to find that as one of the oldest hardwaremen he had not been forgotten. Mr. Ives described how he started out in 1853 in the States, and of how he reached St. John's, N.B., during the cholera scare;, from there he came on to Montreal and got his first order from Crathern & Caverhill. In 1859 he started in business for himself. He thought that Canada to-day offered greater opportunity to a young man than any other country in the world.

H. J. Fuller, Canadian Fairbanks Co., Montreal, who was described by the chairman as being as good a Canadian as any of them, was pleased to notice the broad feeling that existed between the manufacturers and wholesalers. It was of great benefit to trade generally. Another feature to be commended was the interchange of visits between members of the associations on both sides of the border. He was a firm believer in the developing of home products, and he sincerely believed that the manufacturers had the support of the jobbers in the buying of goods made in Canada.

Mr. Fuller being assured on this point, Mr. Starke thought that W. C. Allen, of the Yale & Towne Mfg. Co., New York, would make a good Canadian, and invited him to say something. Mr. Allen was equal to the occasion, and pleased his hearers by saying that their association seemed to work day and night. He had learned that night that good fellowship knew no bounds of flag or country. A calm, fair discussion of problems was better than any amount of prejudiced talk. More money could be made by co-operation than fighting, and each one could have a much better time while doing so. He was greatly impressed with the friendship which evidently existed between the Canadian jobber and the manufacturer.

S. H. ALEXANDER, Hamilton.

Elected President of the Canadian Wholesale Hardware Association.

The Reciprocity Question.

A. F. Hatch, Canada Steel Goods Co., Hamilton, did not believe any country gave such benefits to the young men as Canada did, and they should not listen to any argument that trade benefits should be allowed any other country.

There was too much being said on behalf of the farmer, and not enough on behalf of the manufacturer and jobber. It was just as necessary to have manufacturers and jobbers as farmers. Institutions were built at the expense of the country to help the farmer, why were not similar institutions erected to teach the hardwareman salesmanship and other important knowledge. There was too much talk of building up other countries at the expense of their own.

C. P. Britton, Cowan-Britton, Gananoque, was heard over the cheers to say that he was one of the pioneers who attended the first or second dinner of the association. He was in full accord with the objects of the association. He said to the young men he saw around him that they were among the makers of Canada, and he did not know of any meeting which would have a greater influence upon them. It was for them to do their duty in making Canada one of the greatest countries in the world. He had become a convert to protection. He did not believe in it in principle, but in practice it had worked out all right. He was not in favor of reciprocity with the United States. The day the old treaty was abrogated was the greatest day for this country. "I believe that we have sufficient stamina to stand alone, and not to take favors from anybody."

F. C. Lariviere, Lariviere, Incorporated, Montreal, as a change from the customary speech, gave an instructive sketch on the history of trade and commerce. from the earliest day. The influence of commerce had been more powerful than war. It had changed the whole aspect of the world. It has made canals, railroads and telegraphs. It had brought men together without distinction as to class. Commerce had molded the world's history, and at no period had commerce held such a high place as it did at present. If man found no romance in commerce to-day it was his own fault.

C. A. Birge, Steel Company of Canada, Hamilton, was loudly cheered, everybody agreeing that there was nothing the matter with Cyrus. He proceeded to congratulate the association on its president. If brevity was the soul of wit, then they had the most witty president it was possible to get. Their president was very brief. His customary speech, "Gentlemen, I thank you." had become historic. Referring to his own position, while he did not stand so individually prominent as in the days before the merger, when he was at the head of a concern that he had done his best to elevate, he was proud to be identified with the Steel Company of Canada. One question of vital importance to the country was that of reciprocity with the United States. We have no quarrels with the United States, but as manufacturers, jobbers, agriculturists, or whatever we may be, let us be Canadian always. I do not believe that reciprocity finds a responsive chord from the Atlantic to the Pacific. I urge upon everyone to stand against reciprocity. If we were on a tariff parity with the

United States we might be able to meet them, but the one-sided position to-day is against that. I have a warm feeling towards the United States, but if reciprocity came about, the markets of this country would be crippled, and I believe inside of 20 years Canada would be part of the United States. ("Never.")

Canada's Prosperity.

William Vallance, Wood, Vallance & Co., Hamilton, responding for "Our Association," referred to the fact that he and his old friend, T. H. Newman, together with their secretary, Mr. Hardy, were responsible for the inception of the association. Its usefulness had increased as the years rolled on. When they met together they found that the other fellow was not such a bad sort after all. Alluding to the reciprocity question, Mr. Vallance said a merchant who played the game was not indebted to any national policy. He bought in the cheapest market and sold in the dearest. With equal terms they need fear no man. The country was prosperous under its present tariff, and he did not wish to see it lowered. Canada to-day was in at the height of prosperity, and it would take all the energy of their young men to keep abreast with the times.

James Maxwell, David Maxwell & Sons, St. Mary's, took issue with Mr. Birge. They should not put on one side any question of reciprocity. We should listen if the United States put forward a square deal. We should not say definitely that we will not have reciprocity. We should say it is simply a question of dollars and cents. He did not think it was fair that the manufacturers should always be accepting the invitation of the jobbers, and suggested that the manufacturers should take turn in giving hospitality.

Mr. Birge then invited the association to be his guests at the next convention.

J. Hardy, secretary-treasurer, while thanking Mr. Birge, said that the association would continue to extend their hospitality to the manufacturers. Such a proposal had been before them on previous occasions, but they had decided to continue to invite the manufacturers.

After the toast of the ladies, W. H. Farrell, Dominion Wire Mfg. Co., proposed the toast of the chairman, which was received with cheers and tigers. Mr. Starke briefly replied.

"God Save the King" brought the banquet to a close.

Guests at the Dinner.

Those noticed around the banquet table included: Montreal — H. B. Brainerd, Dominion Cartridge Co.; Archie MacFarlane, manufacturers' agent; Frank Newman, Caverhill, Learmont & Co.; A. Jeanotte, L. H. Hebert & Co.; J. H. Hanson, B. Greening Wire Co.; W. Starke, H. B. Seybold and Gordon C. Seybold, Starke-Seybold; A. Letang, Letang Hardware Co.; H. J. Fuller, Canadian Fairbanks Co.; H. Walter Dorken, Dorken Bros. & Co.; H. R. Ives, manufacturer; R. McK. Haldimand, W. L. Haldimand & Son; A. Prudhomme, A. Prudhomme & Fils; Ross McMaster, Montreal Rolling Mills Co., A. H. Hough, Canadian Tube & Iron Co.; W. A. C. Hamilton, Consumers Cordage Co.; T. E. Peck and Bowman Peck, Peck Rolling Mills; W. H. Farrell, Dominion Wire Mfg. Co.; Geo. A. Childs and C. B. Rittenhouse, United States Steel Products Export Co.; F. C. Lariviere, Larievire, Incorporee; Geo. C. Davis, Frothingham & Workman; and Gordon MacPherson.

Toronto—T. G. Dexter, H. S. Howland, Sons & Co.; W. J. Lawson and A. E. Gilverson, Rice Lewis & Son, Limited; S. R. Kennedy, Kennedy Hardware Co.; Geo. W. Howland, Graham Nail Works.

Hamilton—H. P. Hubbard, Atkins Saw Co.; R. H. Merriman, B. Greening Wire Co.; R. Hobson, C. A. Birge and F. H. Whitton, Steel Company of Canada; William Vallance and S. H. Alexander, Wood, Vallance & Co.; W. H. Ginder and M. Potts, Ontario Lantern & Lamp Co.; and A. F. Hatch, Canada Steel Goods Co.

Waterville, Que.—J. R. Ball, Dominion Snath Co.

New York — W. C. Allen, Yale & Towne Mfg. Co.

James Hardy and J. Brymer, Jenkins and Hardy, Toronto and Montreal.

F. J. Arrowsmith, Montreal, representing Hardware and Metal.

By the Way.

The chairman's emphasis on the word "fellow" in the numerous harmonious renderings of "For He's a Jolly Good Fellow" kept the swing going.

William Valance, who, along with C. A. Birge, while not contending that they were young, refused to admit that they were old, galantly led the final chorus of "God Save the King."

It was told of Mr. Starke that on one of his visits to the States, attending a convention meeting, he was seen forcing a $5 bill under the sidewalk. His explanation was that he had lost a quarter there and was making a good excuse to have the walk ripped up.

There was likewise some repartee between Mr. Starke and Mr. Britton regarding the sale of a cow. The full story was not set forth.

John M. Taylor was prominent in a musical way, and led most of the choruses; also the impromptu healths, "You are not in this."

Archie Macfarlane and S. H. Alexander sang a song each, and were deservedly applauded.

A. F. Hatch's drawing-room stories were well given and no one seemed to have any difficulty in "seeing the point."

Everyone seemed fond of the Merry Widow refrain. Why?

The whole company, on breaking up, agreed with the lines on the menu card:

"He may live without books, what is knowledge but grieving?
Ho may live without hope, what is hope but deceiving?
He may live without love, what is passion but pining?
But where is the man that can live without dining?

Election of Officers.

At the meeting held on Thursday the following officers were elected for the ensuing year:

President—S. H. Alexander (Wood, Vallance & Co.) Hamilton.

Vice-President—A. Jeanotte, Montreal.

Executive Committee—F. R. Newman (Caverhill, Learmont & Co.) Montreal; A. Prudholme, Montreal; J. E. Lemieux, Quebec; S. R. Kennedy, Toronto, and W. J. Lawson (Rice Lewis & Son) Toronto.

Secretary-Treasurer—James Hardy, Toronto.

THE ATLANTIC CITY CONVENTIONS.

The conventions of the American Hardware Manufacturers' Association and the National Wholesale Hardware Association held at Atlantic City last week were the largest in the history of the two organizations. "Re-sale prices" and "private brands," the most im-

portant subjects discussed are referred to in an editorial written by the representative of Hardware and Metal present at the Atlantic City gatherings and will bear study by all in the trade.

The Past Year's Teachings.

The address of President Dudley, of the Jobbers' Association, deals with these subjects and also refers to the recent organization of several co-operative buying companies by retailers doing business in the Eastern States. Mr. Dudley said, in part:

"During the year we have made very careful enquiry as to the expense involved through other means of distributing goods. We have found that manufacturers who had experimented with systems of direct distribution without the intervention of the Jobber, have found that it was much more expensive to distribute goods in that way than through the Jobber. We have found that some who have thought that collective buying was an economical method, have ascertained through experience, that it was quite as costly for a number of buyers to maintain a warehouse as it was to purchase through the Jobber. This entire subject, however, is one which will have careful consideration.

"The subject of re-sale prices will be given very careful consideration. It is the well established policy of this Association, that we request re-sale prices only on such lines as do not bear sufficient profit to cover the expense of doing business. Almost all manufacturers who have fixed a price below which they would not permit their goods to be sold, have expressed great satisfaction with the result of their efforts.

"A very large percentage of all Jobbers are in favor of a re-sale price being established by the manufacturer, under conditions herein referred to. A few jobbing houses (and the number is very small), do not seem to be imbued with any such motives and take every opportunity of underselling a manufacturer's established price, with the result that they come back to the manufacturer with the request for a lower price, claiming that the sale of their goods has not proven profitable. The statement is never made as to why the profit has been removed, but if these persistent price-cutters would state the facts, they would have to advise the manufacturer that it was their own fault that they do not make a sufficient margin of profit.

"Now, we would not have it understood that by re-sale prices we mean that artificial value should be placed on goods in order to assure the Jobber of a large margin of profit. We simply mean that the manufacturer should recognize that the Jobber must obtain a price equivalent to the cost of the goods, plus the expense of doing business, before one dollar of profit is made, and that a very slight commission over and above the same is satisfactory to the Jobber, and that the obtaining of the same, works no injustice to any one. It has been the policy of this Association (and should be in the future) to do our utmost to sustain manufacturers who adopt a re-sale price which protects the Jobber and Retailer in the enjoyment of a reasonable margin of profit.

"While we take the position that the Jobber is entitled to a differential in price which will cover the expense of distribution, and, in addition a slight amount as a net profit, we also see that this Association can consistently go on record as favoring the protection of the retailer's profit.

We have noted with much satisfaction, the movement in this direction on the part of some manufacturers.

It is true where there is no standard of price, the retail merchant is entirely at the mercy of the price cutter, but we find that where manufacturers have established a price to the Consumer, that the same has generally been respected

WM. STARKE, Montreal.

Who Has Retired After Holding the Presidency for 1909 and 1910.

by those who otherwise would have been inclined to have sold goods down as low as cost.

Collective Buying.

We believe that the agitation on the part of a few retail merchants to form co-operative buying propositions, is due very largely to the fact that by reason of the unrestricted selling price to the Consumer, their profit is eliminated and they hence feel that through co-operative buying, a profit may be obtained. These plans have been tried in the past and have not met with success. The retail merchants have found that it was quite as expensive for them to assemble and distribute goods as it would be for the Jobber to perform similar work.

The manufacturers realize that the collective buying proposition is unworthy of support.—

First: Because they realize their dependence upon the jobber for the distribution of their product.

Second: Because they realize that it is unfair to the rank and file of retail merchants whose business is not large enough to justify a connection with a co-operative buying proposition, that a few should be placed in a position where they could interfere so materially with the business of many.

We therefore hope that this convention will give serious consideration to the proposition of advocating the fixing of re-sale prices by individual manufacturers on their product, with the understanding that in doing this, there shall be no effort to obtain anything in excess of a fair and reasonable margin of profit.

We do not advocate the combining of manufacturers to bring about this result, as we look upon that as being illegal, but the law recognizes the right of the individual manufacturer to fix his selling prices, and it is this plan that we advocate.

Visitors Present.

H. L. McNamara, President, and M. L. Corey, Secretary, represented the National Retail Hardware Association at the conventions

Wm. Starke, Montreal, President and James Hardy, Toronto, Secretary Canadian Wholesale Hardware Association, together with S. H. Alexander, Wood, Vallance & Co., Hamilton, F. R. Newman, Caverhill, Learmont & Co., Montreal, W. H. Lamont, H. S. Howland & Sons, Toronto, and H. T. Hunter, Hardware & Metal, Toronto, were the Canadians present at Atlantic City during the convention.

ENLARGING GLIDDEN PLANT.

The Glidden Varnish Company, who took over the Blackwell Varnish Company's plant at Toronto a few months ago, have already found the premises too small and are making extensive enlargements, including a new tank house with a storage capacity of 300 barrels of finished product, a new boiler and power house, a melting house which will give the company four times its present capacity in varnish manufacturing, a filter laundry and reducing house for purifying the materials used in their manufacturing processes, and four large 500 gallon tanks, to be buried in the ground, giving a storage capacity of 2,000 barrels of raw material, which will be brought in on tank cars, stored in the tanks and pumped as required to the various factory buildings. Additional ground has also been secured for the erection of a four story building, to be gone on with next spring.

F. S. Lyman, manager of the Canadian plant, is to visit Cleveland next week to confer with the advertising department, preparatory to launching an extensive advertising campaign in this country similar to that carried on for many years in the United States.

U.S. Dealers to Experiment in Co-operative Buying

Pennsylvania Retailers Organize Million Dollar Company—Dealers Asked to Take Stock and Do Their Buying with the Concern—Several Similar Companies in the Field on a Smaller Scale.

The American Hardware & Supply Co., Pittsburg, has been organized by retail hardware merchants for the purpose of distributing hardware, cutlery, paints, mine, factory and railroad supplies to retail hardware dealers who affiliate themselves with the company as stockholders.

In its operations the American Hardware & Supply Co. will follow the lines of the Philadelphia Hardware Merchants' Association, Philadelphia, and the Bison Hardware Supply Co., Buffalo, both of which have been in existence for some time. M. R. Porter, under whose direction the buying company is being organized, was formerly with the Belknap Hardware & Mfg. Co., Louisville, Ky.

Only Stockholders Get Discounts.

Only those retail hardware merchants who become stockholders of the company will be entitled to the discounts offered on purchases. It is estimated that a merchant buying $1,000 worth of goods a month will receive concessions from regular jobbing prices amounting to about $130, while a merchant buying $500 worth would receive a concession of $65. The small dealer who is a stockholder will have an equal chance with the larger dealer. All bills must be paid by the 10th of the month following the purchase, otherwise the merchant loses the price concessions.

The American Hardware & Supply Co. will confine its operations at first to Pennsylvania, Ohio, West Virginia, New York, New Jersey, Delaware, Indiana and Virginia, and if the project is successful other states will be added to the list. A number of merchants have already purchased stock and others have signified their intention of doing so.

Arrangements are now being made for the use of a large warehouse in Pittsburg. Branch warehouses will be established later if the growth of the organization warrants.

Following is a circular sent out by the company which touches upon the advantages and economies of the plan:

"Shareholders will always be posted on market changes and can figure promptly on any specification and meet prices of supply companies and hardware jobbers. They can secure large orders for direct shipment when not practical to furnish from stock. The retail dealers, being stockholders in a large wholesale company, overcomes prejudice of some buyers against purchasing at retail.

"Since this plan eliminates the necessity for heavy buying, the average dealer could reduce his stock more than $500, invested in the company; if not, interest on this is only $30 a year, or $2.50 a month.

Present Expense and Profit of Conducting a Wholesale Hardware Business.

"Traveling salesmen, salaries and expenses, sales managers, house salaries and assistants, advertising, entertaining and donation, maintaining, credit department and bad acc'ts.....9 per cent

"Interest, house rent and allowance, officers, stenographers, etc., insurance, taxes, etc. .....7 per cent

"Net profit to jobbers .....4 per cent

"As each dealer is his own salesman, and his stock guarantees his account, the item of 9 per cent. and jobbers' profit of 4 per cent. is eliminated. Our purchases will exceed those of most wholesale houses, giving a buyer power enjoyed by but few. We have figured an economy of 13 per cent. and expenses of 7 per cent., but believe the latter can be reduced to 5 per cent. and economy raised to 15 per cent.

"We estimate that on a purchase of $500, at average jobbing prices, the economy will be 13 to 15 per cent., to be deducted from the monthly statement.

Example Based on Economy of 13 Per Cent.

"Invoice	July	10	(itemized)	$90	$72
"	"	15	"	100	80
"	"	18	"	110	88
"	"	21	"	80	64
"	"	29	"	120	96
				$500	$400
"Cost of doing business at 7 per cent				....	$35
"Less economy of 13 per cent				$65	....
"Net am't of July statem't				$435	$435

"Jobbers with best intentions toward retailers are powerless to improve conditions. More than 50 per cent. of consumers' requirements of hardware and kindred lines is purchased from catalogue houses and supply companies, acused by inability of retailers to meet prices. These concerns buy as jobbers and are selling consumers as cheap as jobber can sell retailer.

"Co-operative buying by retailers has seldom been profitable, as average quantities for shipment are small and undesirable to manufacturers, and retail dealers cannot wait indefinite shipping dates. Under our plan immediate shipment will be made from our stock.

"The cost to the retailer (interest on investment) is $30 a year, while syndicate buyers charge several times this sum.

"The plan operates against dealers who buy from two to three hundred thousand dollars yearly from manufacturers, since smaller buyers will purchase on as low or lower basis, and prompter shipment, but several such parties are members of the company because of the advantages of reducing stocks and securing immediate deliveries.

"We will write shareholders later concerning plans for issuing catalogs similar to those of the large catalogue house, to be distributed by the retailer to his customers, confining the line illustrated to those carried in Pittsburgh and in most case by the retailers in their own stores. The local dealer's name only would appear on these books.

"We have planned our new catalog in such a way that dealers will be given better and more concise information than has heretofore been furnished by traveling salesmen. We hope to have this ready for distribution January 1, 1911, at which time we expect to have the company in active operation.

"There is no watered or promoters' stock, and every one is on the same basis. The estimate of 5 and 7 per cent. as expense of doing business, includes salaries of manager and other employes, and, in fact, expenses of every kind.

"We will carry large stocks, especially suited to stockholders' demands, and will appreciate suggestions for addition of new lines, but no one is obligated to buy from the company, unless to his advantage."

ABOUT CHRISTMAS TRADE.

The regular goods in the front part of the store will naturally give way to holiday articles which may be arranged so as to show off to the best advantage, by giving them sufficient space on stands or counters so as not to appear crowded, and to permit customers to examine them critically. It will pay to use enlarged space in the newspapers, and by other advertising to inform the public at large that the store is headquarters for a large and varied stock of holiday goods. Attractive circulars can be mailed and otherwise distributed to customers and to the public in general. Illustrations of the goods adds immensely to the effectiveness of this advertising. Deciding early in the season what goods are to be offered, arrangements can be made to secure electrotypes to illustrate the advertising, which probably could not be readily done at the eleventh hour. Customers appreciate the convenience of having purchases stored until Christmas eve, or until such time as they may designate, and it would be well to emphasize this feature in the advertising as it will induce early buying. This plan can be carried out by foresight in arranging for such deliveries.

Blotters of envelope size are sent out by the Oakmont Hardware Co., Oakmont, Pa., in all mail to customers. By the use of these blotters the concern aims to get the attention of the busy man.

Suggestions for Development of Trade in November

Care Should be Taken That the Christmas Stock is All Received, and That No Shipment is Being Held Up—To be Ready is Most Essential—Planning out The Programme—Consult the Clerks—Give the Windows a Seasonable Appearance of Warmth During November—The Stock of Skates and Hockey Sticks—Keep up The Display of Paints—The Question of Handling Cement Tools.

During the coming month merchants should see that their stock of Christmas goods is complete, and that any line which may have been delayed in shipment, owing to the jobber not having the goods when the order was first received, is either sent on, or the order cancelled and placed with another house.

It is imperative that the whole stock as figured out by the merchant, should be in the store, so that there is no delay in showing the lines when the time comes. If a competitor for the Christmas trade happens to step in before the merchant in any particular line, and thus secure an attention that the latter cannot, because the goods are not in the store, then the shipment when it does come has lost half its selling power. Therefore if a merchant thinks there is any chance of being held up for any particular class of goods, he should cancel the order and place it elsewhere.

With the whole stock in, the merchant can go over every line carefully, and consider how best to display it, and to what extent he should advertise each class of goods individually. If he has something that he thinks will prove a big bringer in of business, he can arrange for a little extra advertising attention. The Christmas campaign is not to be attempted in a happy-go-lucky sort of way. The probable selling worth of each line should be carefully weighed, the amount of advertising, the window displays and their designs, the various ways suggested from time to time in these columns to excite the curiosity of the public, and to bring them to the store, all should be gone over carefully this month, so that when December arrives there shall be no delay. The clerks should be consulted. One or two pleasant evenings could be spent by the merchant and his staff discussing ways and means. It would be time well spent, for it all depends upon the handling of the stock how the Christmas trade is going to swing.

It must not be forgotten that the Christmas demand can be stimulated much easier than a from day-to-day demand for an ordinary article of hardware. The demand is there, and the merchant has not so much to create it as to swing it in his direction. The custom of giving presents is developing of itself every year. What the merchant has to do is to prove that he is the best medium for the buying of presents. This can only be done by a strong campaign at publicity. Excite the curiosity of the district, show among the many useful articles that is generally carried by the merchant, novelties that will make the people talk, and the battle is half won. All this, however, means hard work, and careful planning out. Therefore the merchant who this month gets his whole extra Christmas stock in his store, who has carefully picked out from his staple lines articles that would make useful presents—and it is surprising how many there are—and arranged them in his mind's eye all ready for the fight, is in the best of condition to secure success.

Seasonable Displays.

During the month the windows should be given a seasonable appearance. Whatever the design run let there be a warm cosy look about it, suggestive of the comfort that appeals at this time. Last year we suggested a winter comfort window, and many merchants followed out the idea with a great measure of success. It is a subject that can be elaborated in many directions just according to the ingenuity of the merchant. The scheme briefly is to display in the window those articles which go so much during the winter evenings to make the home cosy and comfortable.

Among the many articles are included reading lamps, oil, gas and electric, screens, curtain rods, oil and spirit heaters, chafing dishes, various electrical devices, cutlery and glass and china ware. A cosy room could be represented in the window, and with the aid of screens and curtains and an imitation log fire at one end and a red lamp showing at night a very good comfort window can be shown. This will not only bring in trade but it will be a good advertisement. The same idea could be followed out so far as kitchen goods are concerned. A kitchen could be shown displaying a kitchen range, and various enamel and tin ware. Give the whole design a warm and cosy look. Do not make the air around the range look so cold that one gets the idea that the fire must be out. A merchant who displays a little ingenuity in this way does a great deal towards advertising his store and bringing in trade. It is the window that is out of the ordinary and yet displays the articles that the merchant wishes to sell that produces results.

Sporting Supplies.

During the month the merchant should go over his stock of skates and hockey sticks to see that his lines are well assorted. It is a costly error to be short on popular sizes especially if there is a rival hardwareman. Toboggans, sleds and snowshoes should receive attention, for in this, as in other lines of sport, the customer is not inclined to wait for the goods to arrive from the shipping house, especially if he can get served elsewhere. Gymnastic supplies are also worth pushing. Most institutions devoted to the betterment of the younger generation are fitted up with gymnasiums, and there is a very wide field for development in the country districts. An opportunity exists here that a merchant can well follow up.

Weather strip, snow shovels, sleigh heaters, stable fittings, horse blankets, heating accessories, glass and putty should all have their share of attention. Many merchants are inclined to ignore the staple lines of hardware in their advertising propaganda. Specialties get all the attention probably because the merchant thinks that everybody knows that a hardware store carries enamelware, tinware, and other staple lines. That is very true, but everybody does not know what class and style of enamelware the store carries unless they are shown. Many a housewife would decide to turn out an old kitchen utensil for a smart looking enamelware one if her attention was called to the latter by reason of a good window display. There are also a lot of kitchen utensils that many are at present doing without because it is not generally known that the merchant has them in stock. It is wrong to imagine that because an article is known to be carried by a merchant that there should be no attempt at pushing it. No article should be left to sell itself.

So long as the fine clear weather continues the outdoor paints should be prominently displayed, and the reasons why painting is most satisfactory at this time driven well home. But that does not mean that on the arrival of the unseasonable weather the paints should disappear to the back of the store. There is the indoor painting to be considered. Here there is no season limit. The varnish-stains, the enamels, the bronzes and so on can be put on all the year round, and the need for them exists all the year round. So that the merchant not only caters to a demand by pushing his indoor paints but he maintains the continuity of the interest in his paint department as a whole.

In introducing new goods, an Eastern retail hardware firm makes a practice of sending personal letters to women of the town. These letters call attention to the merits of the new line of goods. Frequently an article is sent to a home by a messenger, and an accompanying letter states that the article has been left for a day's trial.

IMPORTANT TRADE PROBLEMS.

Re-sale prices and private brands were the two questions to receive most attention at the conventions of hardware manufacturers and jobbers, held in Atlantic City last week.

Quite a large number of manufacturers have adopted a definite re-sale price for both jobbers and retailers, and they claimed it had worked admirably.

One of the chief advantages is the elimination of the price-cutter, who invariably demoralizes trade in his locality. Under the new system he enters into an agreement when he purchases these lines of goods not to sell them below a certain figure. If any dealers violate this agreement all channels through which he might secure them are watched and special mark is placed on all goods sold the parties who are suspected of supplying him. In this way the manufacturer is able to find out the jobber through whom the goods are sold, and unless he refuses to sell the price-cutter his supply is shut off.

The re-sale price system assures every dealer of a good, fair profit. Many retail dealers have not figured out definitely just what it costs them to handle certain lines of goods, and the result is they do not add sufficient margin of profit. The manufacturer goes into this matter thoroughly and fixes a profit which is considered by the majority of the trade as adequate, and yet not too high to curtail the demand from the general public.

A definite fixed re-sale price has been found to be the most efficient method for fighting the catalogue house, as they have established their reputation for cheaper prices by cut prices on a few of the standard lines of goods. Manufacturers are beginning to see that once the retail dealer has been eliminated or greatly weakened, the catalogue houses will then be able to dictate prices to the manufacturers, as they will control the distribution.

All manufacturers are ready to admit the advantages of the re-sale price system, but some of them claim that the freight is such an important item on their goods that it means they would have to fix different prices for half a dozen or more different sections, and this would mean that on the border towns between these sections there would be two schedules of prices for firms who would be competitors.

There are also a number of manufacturers who claim that it would be impossible for them to enforce a re-sale price on their goods, owing to the subterfuges adopted by dealers for giving a concession in some shape or other to customers buying goods at the regular fixed prices. One manufacturer stated he had tried out the re-sale price system in England, but that he had to give it up on this account.

The other question of private brands has not made much progress, as far as any action of either association is concerned. There is, however, a constantly increasing number of manufacturers who are refusing to market goods under any other brand than their own private brand, and there are also more jobbers each year who are adopting special brands of their own, and endeavoring to induce their customers to handle them in place of the manufacturers' private brands.

Jobbers' brands are probably a good thing for the jobbers, but the manufacturer who goes into the business of manufacturing special brand goods for jobbers has very little to fall back on if the jobber decides to place his business the following year some place where he can get a slightly better price.

The whole situation seems to be very well summed up by Mr. S. Norvell, of Norvell. Shapleigh Hardware Co., St. Louis. who stated that he believed it was good policy for jobbers to get goods made under their own special brands, but that if he was a manufacturer he wuld refuse to make any goods which did not bear his own private brand.

BIG POWDER MERGER.

Rumors of a merger of Canadian manufacturers of explosives have been whispered around recently, and it is understood that the arrangements have now been practically completed, the new corporation to be known as British-Canadian Explosives, Limited, with a capitalization of $10,000,000, and having headquarters in Montreal.

The Nobel and Dupont companies have been on friendly terms for several years, the latter operating chiefly in the United States and the former paying more particular attention to the Canadian market, also controlling the Hamilton Powder Company, with plants at Windsor Mills and Belle Isle, Que., and Nanaimo, B.C.

In the consolidation are the companies referred to and the Ontario Powder Co., Standard Explosives, Limited, and the Western Explosives, Limited, these including practically all the companies producing explosives in Canada except the Giant Powder Company, San Francisco, which has a plant at Telegraph Bay, near Victoria, B.C. There are also several smaller concerns in Eastern Canada, some of which have recently secured charters. Competition has been very keen during the past few years and this state of affairs has been a factor in bringing the various corporations together.

MAKE THE STORE ATTRACTIVE.

A hardware salesman in a Lindsay store made a good point the other day when he said that appearances count a whole lot in making the store popular for women buyers. He believed in adopting modern methods of display and in using silent salesmen and up-to-date conveniences, but he was handicapped by being forced to put up with fixtures which are not strictly modern.

Then he told of how he had made a sale of a number of large mirrors to a Greek, who had recently remodeled a Lindsay store and opened a confectionery and ice cream parlor. The Greek, by making his store attractive, has captured the bulk of the trade formerly held by the behind-the-times confectioners who had depended upon a parlor behind their store or a table behind a screen to attract business.

Appearances count, not only in store arrangement and fixtures, but in the personal dress of the salesmen. A bright, cheery store, with modern silent salesmen, bright window trims, a clean floor, and a metallic ceiling, clear of lanterns, pails, tinware, etc., and with neatly-dressed salesmen behind the counter, will quickly outstrip in trade its rival with fixtures purchased and installed by the fathers of the present generation.

Brighten up the store and go after the women's trade.

Merchants living in good farming sections can awaken considerable interest and obtain good advertising out of a Harvest contest, in which prizes might be offered for best ears of corn brought in on or before a certain date. When they begin to come in, the merchant can arouse interest by exhibiting them in a prominent place.

How to Increase Holiday Trade in Small Towns

Begin Advertising Early in Order to Familiarize the Public That Practical and Useful Gifts Can be Secured at The Hardware Store — Goods Should be Put in the Window Not Later Than December 1 and the Displays Changed Several Times—Lines to Push.

Written for Hardware and Metal by W. J. Illsey.

From personal experience I consider the best policy for merchants in small places to adopt in developing holiday trade is to begin calling attention to the Christmas goods about the middle of November, through the medium of the local weekly or semi-weekly paper. You need not necessarily use your ad. space every week from that time up till Xmas for advertising holiday goods. But, as is known to the hardware dealers in general, the public do not think of the hardware store as the place to buy suitable Xmas gifts, so you must educate them to this fact, and the only way to do such work is through the weekly or semi-weekly advertisement.

In these holiday ads. tell the public that you have bought largely of lines which you are sure will be found most attractive as Xmas gifts. Enumerate the various lines, and quote prices. Suggest what you have suitable for the various friends to whom the purchasers might wish to give. For boys and girls, or for ladies or gentlemen. This plan starts them talking and planning.

Then along about the first week of December start your window displays of Xmas goods. Have plenty of price tickets on the lines displayed, also cards advising early selecting. Change the window displays at least 3 times during the early part of December. Then about Dec. 15 or 16 put in your real Xmas display. It will be wise to do this early, as all hands will be required during the last week to help serve customers.

A good plan is to have some scheme such as the giving away of some article or articles on the day before Xmas. With each purchase made give a coupon which is numbered. Advertise that on Xmas Eve, or during the day before Xmas day, you will give these gifts to the persons holding the corresponding numbers on the article or articles chosen for the event. This will cause a lot of talk, and, of course, all who have purchased will want to come to the store, and wherever there is a crowd more will gather, and you will thus get a lot of good advertising for small expense.

Always keep in mind that you are out to get more Xmas business. Do not stop after a few efforts have been put forth. Keep everlastingly at it.

Make the people know that you are offering splendid lines for Xmas presentation. Use everyone who comes to look only just as well as the one who buys. They will very likely come again.

Get all your clerks enthused. The plan of offering a bonus to all clerks on amount of sales made has been tried, and by some found successful. But the main things are, and always will be, to first have suitable goods which you know you have bought right; second, to let the people know what you know; and third, you will find that just as soon as the public realize that you are in a position to serve them to their satisfaction business will increase, and you can count on more of it each Xmas as the years roll along.

Here are lines which should be pushed for Xmas selling:—Skates, sleighs, hockey sticks, small calibre rifles, air rifles, games, toboggans, pocket knives, electric smoothing irons, fancy plated (copper) tea or coffee pots, carpet sweepers, carvers in cases, cases of fruit knives, and also of steel cutlery, plated knives, forks and spoons, safety razors, shaving brushes, scissors in sets, and separately, small tool chests filled with tools, etc.

You will note that most all the above are lines carried usually in regular stock. But they must be pushed, and if you do your part the results will never fail to please you.

EVERY ARTICLE WAS PRICED.

One of the holiday windows which received honorable mention in Hardware and Metal's window dressing contest a year ago was that shown in the accompanying illustration, it being arranged by K. Mathewson, son of George Mathewson, hardware merchant, 734 Queen street east, Toronto. It is such a window as could be arranged in practically any hardware store in Canada, no matter how small the place, or how ancient the store front, with satisfactory results.

The side of this window was composed of a large door hung so that it could be placed at any angle, it being covered with golden yellow felt, each corner being decorated with half a dozen sets of knives and forks. The centre was a square, composed of bread knives, with a few odd butcher knives around the outside to fill the board. The back was an arch covered with the same material, with wire shelves on the sides, and on these were set 3 piece carving sets. The top of the arch was decorated with 2 piece carving sets, while on the inside of the circle was an advertising sign, the inner and outer edges of circle being decorated with holly. At the bottom of the window were other cutlery goods, such as knives, forks, spoons, sets of silverware, etc., every article having a price ticket attached.

Hanging on the front of this window was the sign "Merry Xmas," the "Merry" being a painted sign, and the "Xmas" cut out of a cedar block with pocket knives stuck on the sides of same, with a price ticket on each letter. We found the price tickets helped very greatly in selling goods, and that we could make much better and quicker sales.

The opposite window was decorated with skates, sleighs and hockey sticks, the good hockey sticks being fastened on a board at the side, and the cheap ones hanging in two circles from the ceiling, the bottom being given up to skates only, and the back to sleighs.

This window had a background of green felt.

Holiday Window Trim in George Mathewson's Store, Toronto.

CANADIAN METAL MARKETS

See Itemized Market Quotations on Page 66.

MARKETS IN BRIEF.

Toronto.

Canada Plates—Advanced 25c.
Tinned Sheets—Advanced 25c per 100 lb.
Galvanized Sheets—Higher by 5c per 100 lb.
Tin—1½c decrease.
Turpentine—Advanced 3c.

MONTREAL.

Oct. 28—The firmness so noticeable in the markets last week due to the stronger tone in the primary markets has continued, and although tin in London had a slide yet locally no change was made, and merchants held rigidly to old figures. Concessions for good round lots were not easy to obtain, and altogether the situation has been very bullish.

Trade has continued very good. Users have to come repeatedly into the markets owing to the low stocks carried, while those who ship by water are commencing to look further ahead so as to have some metal by them when the higher freights are imposed. The strengthening tone to the markets naturally brought in a lot of inquiries, and as one merchant said things seem more like old times. Tin has been moving well at the high figure of 38c, while spelter, copper, and lead have been stimulated rather than checked. The imported iron situation is unchanged except that operations are being quickened on account of navigation drawing to a close. Prices are firm and unchanged.

During the week there was a slide in tin, but the bull operators did not lose control, and their efforts to maintain high prices will be watched with interest. Copper is showing more stability, and the favorable opinion expressed last week as to its improvement is further confirmed as time goes on, and without being unduly optimistic it looks as if copper was in a fair way towards recovery. There is less apathy in New York, and prices are slowly advancing which is much better than a quick rise. Spelter and lead continue to show higher figures in London, and all the way round there is an excellent tone despite uncertainty as regards tin. In fact merchants across the Atlantic have been refusing to quote on later delivery in most lines. The situation in the United States iron and pig markets is just the same, with new business hanging fire unless encouraged by some concession.

Pig Iron—The market continues in a healthy state with a good brisk trade going. Deliveries are being hastened on account of the nearing end of navigation. New business is reported as being fair for domestic furnaces. We quote: No. 1, $18 to $18.50; No. 2, $17.50, at furnace; Middlesboro No. 3, $18; Summerlee, No. 1, $20.50; No. 2, $20; No. 3, $19.50. Little change is reported in the United States situation, although the general feeling is not quite so depressed as it was. New business is being booked although buyers are asking for concessions and getting them.

Tin—There is no change in local quotations and jobbing prices continue around 38c, good round lots being of course closer to the primary market price. Inquiries are good, and trade brisk despite the lack of confidence in the market. A slide occurred during the week in London. The great point now being discussed is whether the bull operators, who have been able to hold the market so long are in a condition to keep things together. Business on American account has dropped off, while the recent cornering of spot supplies in New York has entirely fallen through.

Copper—With the good stiff tone to the markets copper has been stimulated in demand, and better trading is reported. Users are taking a keener interest in the market, and both buyers and sellers are much less apathetic. The local price is unchanged although New York has been slowly strengthening. Stiffer prices will come however if the improvement continues. There is still no discordant note in New York. There is a strong opinion that copper has commenced a strong but steady upward movement, and it is certain that there is more consumptive energy while the large users are taking greater interest in the market. The whole situation, however, hangs upon the fact whether production is to be genuinely restricted or not.

Spelter—Spelter is unchanged although very firm in tone. Trade is active and some large contracts have been placed during the week. The English market still rises, and a continuance of the movement will be reflected in local prices.

Lead—The lead market is very firm under good reports from the old Country. Trade has improved and merchants profess themselves satisfied with prospects. The English market has gone well over the £13 mark, and an advance locally is anticipated if the good feeling continues.

TORONTO.

Toronto, Oct. 27—There is a general improvement in the metal market, particularly in copper. Confidence is now being displayed in all quarters and the market is firmer than it has been for some time.

Advances are recorded in tinned sheets, galvanized sheets and Canada plates, due to light stocks.

The price of tin has decreased 1½c on the local market. The London market experienced a break this week but has since been gaining a little.

Pig iron—The pig iron situation is rather better this week. The demand is good although the orders are small. Prices remain firm. No. 1 Canadian is $19.50, while $19 is the figure asked for No. 2, f.o.b. furnace. Other quotations are Middlesboro No. 3, $20, Summerlee N. 2, $22.50, Cleveland No. 1, $20.50, Clarence No. 3, $20.75, Jarrow, $20.50 and Glenganock, $22.50.

Tin—The tin market has been irregular but it closed strong. In London there was a distinct break, the highest point reached being £170 and the lowest £162½, but the closing quotation was £167½, showing renewed confidence. A decline of 1½c was shown in the local price, 38½c being asked for large consignments. Last week's quotation, 40c, was asked for smaller bulk. The demand continues good.

Plates and Sheets—There is active demand for sheets and plates. This, combined with the lightness of the supply has caused an increase in several lines. Tinned sheets have advanced 25c per 100 lbs,, galvanized sheets. 5c per 100 lbs. and Canada plates 25c per box, the latter price now standing at $4.00. The increase in Canada plates results from the falling off in English production. Jobbers do not regard the increase as other than temporary. The prices on charcoal tin plates and charcoal tin boiler plates remain firm and the demand active.

Copper—The copper market is firm and buyers are in the market for forward requirements. There is a feeling of optimism evinced on all sides and buyers are acting on a belief in the stability of present quotations. The demand is heavy, prices remaining firm.

Spelter—The tone of the market is excellent, though slightly lower prices are quoted, $6.15 to $6.25 being the prevailing figures. Trade is active, there being good demand. The outlook is for a firm market.

Lead—No change is quoted in lead. The demand is strong and sales are reported to be satisfactory. All markets are firm with every prospect of remaining so. Domestic lead is quoted at $3.75 with a 5c increase for imported lines.

Old materials—No changes have been made in old metals but the improvement in new metals has had a quickening effect. Dealers are quoting as follows: light copper and bottoms 9¾c; heavy copper and wire, 11 to 11½c; heavy red brass, 9½ to 10c; heavy yellow brass, 8c; light brass, 6c; tea lead, 2½; heavy lead 2¾c; scrap zinc, 3½c; No. 1 wrought iron, $10; machinery cast scrap, No. 1, $14.50; stove plate, $13; malleable, $8; miscellaneous steel, $6.

U. S. METAL MARKET.

New York, October 26.—The Iron Age says: The feeling is general that iron trade conditions, while they may not

change decidedly for the better in the near future, are not likely to grow worse. Consumption in all lines, apart from the railroads, has been maintained with steadiness in the past two months, and it is expected that whatever improvement comes this year will be almost exactly measured by the business the railroads place.

The Steel Corporation's report, showing earnings of $37,365,000 for the third quarter of the year, or only 7 per cent less than for the second quarter, was better than might have been expected from the slowing down of output since the middle of the year. The comparison is favorable, also, with the third quarter of 1909, when with a larger output at somewhat lower prices the total was $38,247,000.

Pig iron buying has increased in the past week, but again prices have suffered and another has been added to the succession of bottoms.

HARDWARE MARKETS

MONTREAL.

Oct. 28.—There is a very good tone to trade, and jobbers report a steadily increasing volume of business. There is still no desire to load up heavily on the part of dealers, but the orders are well assorted and show that a lot of care is being exercised in the selection of the goods. This is particularly noticeable in the ordering of the Christmas lines. A stronger tendency to buy only the best grades of cutlery is also noticed. At one time merchants were not at all particular, price then being the main thing, but now it is different, and quality has the first consideration. Reports from the jobbing house and houses dealing with purely fancy goods alone such as are suitable at Christmas show that dealers are not only anticipating a good Christmas demand, but they are going to cater well to it.

Stoves and range houses report a brisk call the colder weather naturally stimulating the consumptive demand. Cold hods, ash sifters, pokers, etc., are also in good demand.

Seasonable lines such as sleigh bells, weather strip, lanterns, snow shovels are moving very well in a sorting up way. There is a very brisk movement in skates and hockey sticks, and stocks are already showing signs of the inroads made upon them. Snowshoes are also more prominent. Guns have now fallen off, but there is a steady call for ammunition. Lumbermen's supplies are now very brisk, while builders' hardware continues to be about the most reliable seller.

Seasonable Lines.—A steadily increasing volume of business is being done in general seasonable lines. Sleigh bells, sleigh heaters, weather strip, snow shovels, heating accessories, and lanterns, are moving well in a sorting up way. Staple lines such as carpet sweepers, sad irons, food choppers, bread mixers, and cleaning utensils are in steady request. The market has a good firm tone.

Cutlery, Silverware and Fancy Goods.—Reports from the various houses show that orders for carvers in cases, table cutlery, spoons, forks, general lines of silverware, cut glass and bronze, china, leather and other fancy lines are increasing. One house dealing with purely fancy lines said that its trade with the hardware industry has greatly increased within the last year or so, and this season business looked to be a record.

Sporting Goods.—The sorting up demand for guns has quieted down, although a steady request for ammunition is noticed. Skates are the strong lines just now, and with hockey sticks form a good percentage of the general orders going out. Snowshoes, toboggans, sleds and gymnastic supplies, are showing a seasonable stimulation.

Builders' Hardware.—The movement in builders' hardware is still a very good one and this line should certainly be given the pennant for a steady call. The country trade is dropping off, but locally the demand is still very good. The market is firm and we quote: Lock sets (inside) $4.25 per doz. and up; lock sets (outside), $13.20 and up; common rim locks, $1.10 per doz.; porcelain knobs, $1.10 per doz.; sash cords, 32½ to 33c.

Bolts and Nuts.—The demand maintains its strength, with the good construction work going on. Nails are also in strong request. The market is unchanged, and we quote: Discount on carriage bolts, ⅝ and smaller, 70; machine bolts, ⅝ and less, 60 and 10; coach screws, 75; stove bolts, 80 and 7½.

Heavy Hardware.—There is a good movement in bar iron and steel but other lines are quiet. The market is steady and we quote: Chain coil, ¼, $5.25; ⅜, $3.80; ½, $3.50; ¼, $3.25; 1, $3.25; anchors, 4½c lb. up; merchant bar iron and mild steel, $1.90; steam gauges, $1.50 each up; injectors, $4 to $18 each.

Wire.—There is a little doing in most of these lines just at present. The market is firm and we quote: Barb wire, car lots, mixed, $2.45; small lots, $2.50; plain twist, car lots, $2.75; small, $2.80; galvanized wire, No. 9, $2.25 in straight and mixed car lots, and $2.30 small lots, f.o.b. Montreal; coiled spring fencing, $2.30 straight and mixed car lots, and $2.35 small lots; plain wire, bright, annealed and annealed and oiled, $2.35 base; staples, bright, $2.60; galvanized, $2.85.

Lumbermen's Supplies. — The movement in boot calks, axe, and axe handles has improved, while snowshoes are also commencing to be called for. Prospects for lumbering operation improve as time goes on.

TORONTO.

Oct. 27.—Trading is reported good by the jobbers, particularly in builders' hardware, while sporting goods are still selling in large quantities. The sale of seasonable goods is very fair and early winter lines are now moving with regularity. There does not seem to be any distinct gain in winter goods, however, owing to the continued mild weather. After the first hard frost, trading will improve.

In a heating goods there is pronounced activity. Jobbers are overloaded with orders, particularly for hot air furnaces. It is found difficult to keep up with the demands of the markets.

Seasonable Lines.—The demand is gradually veering from the late fall to the winter lines, but the continued warm weather is holding off the winter trade to some extent. There is not much demand at present for snowshovels but weather strips, wire mats, sleigh bells and sleigh heaters are moving and the trade in lanterns, stall fixtures, blankets and general farm goods continues good.

Builders' Hardware.—The demand is strong with no signs of a falling off. There is a continuous sale of roofing and metal shingles and sheets are being used. Business in all lines of builders' hardware has been and promises to continue satisfactory. Prices remain firm.

Household Goods.—There is a consistent demand for all lines. Kitchen accessories, tubs, washing machines, mops and brooms are called for. With the approach of the Christmas season the demand for cutlery is showing signs of activity while silverware is improving.

Heating and Lighting Goods.—The stove trade is at its best. Jobbers and manufacturers are finding it hard to meet the demand, due to the volume of trade and also to the fact that rush orders predominate. Householders are showing anxiety to have furnaces installed while the mild weather lasts and are urging quick delivery. Activity is noticeable in pots, pans, stove pipes, cookers and other lines of like nature. Lighting goods are selling well and a steady demand is shown for gas and electric fixtures.

Sporting Goods.—The demand is still strong. Guns are not selling freely but ammunition is being sold in large quantities. Jobbers stocks are becoming low. To the opening of the partridge season is attributed the renewed interest in field sports. Skates and hockey sticks are now in demand although the trade has not reached seasonable proportions. Rugby goods have fallen off with the advance of the playing season.

Heavy Hardware.—The market continues firm and active. There is a consistent demand in all lines.

Christmas Goods.—There is no great demand yet for holiday lines but indications point to an early activity. Inquiries are received for the better grades of cutlery, silverware, brassware and leather goods, indicating a tendency to carry the best lines.

Steel Magnates Reach International Understanding

Canadians Participate in Organization Meeting of American Iron-Steel Institute — Representative Steel Manufacturers Also Present From Europe—An international Understanding One Result of the Meeting—Stability of Prices Aimed at.

As announced in Hardware & Metal last week, the first gathering of the American Iron-Steel Institute held at New York on Oct. 14, was the most important gathering of steel magnates ever held in America, Canada being represented at the meeting by T. J. Drummond, Montreal, president Lake Superior Corporation, George W. Watts, assistant general manager Canada Foundry Company, Toronto, John M. Taylor, president Taylor-Forbes Company, and John M. Taylor, junior, Guelph. In addition to the Canadian members of the Institute, there were about twenty-five of the most distinguished and representative steel magnates from Great Britain, Germany, Austria, Belgium and France, many of them titled, present as guests. Included amongst these were such men as Baron Bodenhauser, director of the Krupp Gun Company, Germany, and Sydney Jessop Robertson, managing director of Wm. Jessop & Sons, Sheffield, England. All of the foreign guests were able to speak the English language.

An International Understanding.

Judge Elbert H. Gary, chairman of the United States Steel Corporation, in opening the Institute meeting, said:

"This is a momentous occasion. There are represented in this room the principal iron and steel manufacturers of America, and also a very large percentage of the manufacturers of iron and steel of foreign countries; and in this day when competition is so great the world over, when men are contesting for pecuniary success, when rivalry is not only emphatic, but often destructive, and many times bitter, we in this room advocate the gospel of peace and good will. Our creed is the Golden Rule, and we practice what we preach. Many kind things have been said during the day concerning the United States Steel Corporation, and that corporation and its representatives have been generously given much credit; but I assure our friends from abroad that the great success of the United States Steel Corporation is largely dependent on, and the result of, the friendship and co-operation of other great steel and iron manufacturers in this country (applause.) Whenever any great question of great importance is to be considered, all the leading iron and steel men of this country cheerfully and promptly recognize any request for consultation and lend their influence and effort to the success of whatever object may be sought to be determined."

Speakers representing various countries replied to Judge Gary, probably the most interesting statement being made by G. Scaby-Smith, managing-director of Bolckow, Vaughan & Company, Middlesborough, England, who said:

"I understand your institute concerns itself more immediately with commercial questions. Our past intercourse with you has, I think, proved to us all that it is to our mutual advantage to meet and discuss these problems, which are of equal or greater importance than technical experiences. By doing this we not only enable the producer to have the advantage of the experience of the best appointed works, but we are able to exchange such information as to supply and demand as to prevent over-production or undesirable scarcity, and hence possibly inflated prices. So far as the gentlemen present from England are able to represent the English views, I believe we are in accord with the idea that arrangements of this character are to the adantage of all. We have come here to learn and be instructed and I trust that the result of our visit may be to draw us into closer relationship with you.

"President Farrell will, I think, bear me out when I say that the European makers are generally prepared to take a reasonable view on all questions affecting their commercial interests, and, on the other hand, I may say that we have always found the American equally reasonable. We hope that the bond of union inaugurated by the birth of your American Iron and Steel Institute will continue to exist and to extend. Possibly in the near future these gatherings may prove the need of an international iron and steel institute, at which the discussion of commercial and technical questions may be a feature. I am sure that a policy of friendly conference for the exchange of views and experience on such matters can do much to remove the sharpness of under competition."

Stability in Prices Desired.

One of the most important addresses delivered at the meeting was that on "Co-operation in the Steel Industry" by Judge Gary, in which he referred to the growth of the iron and steel industry in Canada and the United States, and the present conditions surrounding the industry. He said:

"One of the most important matters at this time, and perhaps at all times, is the maintenance of stable conditions in the iron and steel industry; and to this is attached the question of prices. For periods, at least, in the past unsatisfactory conditions have been the rule and not the exception. Violent, sudden and wide fluctuations in prices have occurred, and they have been detrimental to every one connected with the business and to the public generally. The steel and iron industry, more or less recognized as the barometer of trade, has had an influence on general conditions for good or bad, and much of the time for bad. We do not advocate, and never have, fixed unchangeable prices. If they are unreasonably high they should be lowered, and vice versa. If for any good reason at any time we are convinced that the rights and interests of ourselves, our employees, or our customers demand decreases in selling prices or the readjustment of prices, we should be prompt to make them. This does not, however, militate against the general proposition in favor of stability as opposed to demoralization. We know, as a matter of fact, from most careful observation and an abundance of testimony from those directly affected, that the maintenance of fair prices and the prevention of sudden and wide fluctuations is desired by our customers themselves."

Law of Supply and Demand.

"It has sometimes been urged," continued Judge Gary, "that an effort to maintain reasonable prices for iron and steel is contrary to the natural laws of trade; that it is opposed to the law of supply and demand. This we do not admit. We do not undertake or advocate anything unreasonable, unnatural or unfair. Those who oppose the maintenance of fair prices when the volume of business is low, on the ground that it is contrary to the law of supply and demand, make the mistake of supposing that capacity to produce creates supply. The law of supply and demand means the quantity which one possesses and is willing to dispose of and the quantity which another desires to possess and is willing to buy. Capacity to furnish does not create supply; nor does ability to purchase create demand. It is just as illogical to say that because one is able to furnish a given quantity, that is evidence of the supply, as it would be to say that because another can use and has the money to pay for a certain quantity, that constitutes a demand. The whole question should depend upon mutual consideration and decision. The seller should never take advantage of the necessities of the consumer to advance prices unreasonably, nor should advantage be taken of the necessities of the producer to secure his product at an unreasonably low price.

"What, then, should the manufacturer do at times when the consumers or purchasers are not willing to pay the price demanded, however reasonable it may be? Many of us, at least, believe he should reduce the output to meet the demand, much or little, and wait until those in need are willing to pay what is fair and right. Remember, this assertion is based on the assumption that prices at all times must be fair and reasonable and subject to reductions or changes whatever it is decided they ought to be made. Such reductions.

however, should be made only after due consideration and in an orderly way, and not as the result of panic. On the other hand, if prices are at any time higher than they ought to be, the consumer, whatever his pecuniary ability to pay may be, should wait until the prices are reduced. If the attitude of both seller and purchaser should be as suggested, it would not be long before they would get together on a proper basis, especially if what we advocate shall be carried into actual effect. What has been said is outside of, and without reference to any question of special privilege or undue advantage or improper control of any commodity which would enable the producer from motives of cupidity or otherwise to fix or maintain unreasonable prices, or to take advantage of the necessities of the consumer. The great aggregations of wealth make this question important; but it may not be appropriate to discuss the same at this time."

Addresses were also delivered on "Foreign Relations," "Betterment of Labor Conditions," "Contract Obligations" and other subjects by men prominent in the financial and industrial world, and a banquet was given in the Waldorf-Astoria on Friday, Oct. 15. On Saturday the party made a tour of New York harbor and between Oct. 16 to 22 made visits by special train to Buffalo, Niagara Falls, Chicago, Pittsburg and Washington, inspecting several steel furnaces and plants en route.

HARDWARE TRADE GOSSIP

Ontario.

H. Occomore, Guelph, was a visitor in Toronto on Monday.

The Stirling Electric Supply Co., wholesale and retail dealers, Toronto, have assigned.

The Glidden Varnish Co., Wallace Ave., Toronto, are building an addition to their factory.

H. Disston & Sons are to erect a one storey addition to their Canadian sawmaking plant on Fraser Avenue, Toronto, to cost $6,000.

The Canada Forge Company, Welland, have taken up the manufacture of tool steel in addition to their regular line of iron and steel forgings.
